You asked for it, you've got it. I'M BACK!

1) thank you, and yes, as you know the actual commercial
content is less than 1% (253KB on a 110MB site).

2) yes, it does, because people seem to like to attack me and
lie about me on Usenet (because they are totally gutless and
wouldn't dare do it face to face).

3) I *really* wasn't, but I am now :)

[time warp ON...]

Does anybody know of any desktop TV apps dating back to the early 80's?
I'm looking for something which would have displayed a TV program
schedule and allowed the user/viewer to select what to watch.

In particular, which of the early computers (TRS-80, Apple][, Atari,
Amiga...) was the first to provide such a capability?

Any info much appreciated!

1812. WTB: The Last Star Fighter

Hello -

Years ago, when my little Atari 800 was the screamer of the bunch with 48k of RAM, a local guy had dubbed a copy of 'The Last Starfighter' onto cassette (wow) for me.

You turned on the machine while holding down start, it loaded from the tape.

Anyone got a copy / make a copy for me? Will pay reasonable fee for the disk transfer, (IE <5) since I know there wasn't an original released to manufacturing.

Thanks

Tom

>business with him.

You asked for it, you've got it. I'M BACK!

1) that is a lie. I did lists for several systems that NEVER had
them, and when I did use a list as a template I gave credit (hell,
I went one better than that and mentioned Dean Dierschow in
EVERY list, not just the ones he had done). And my LARGE
collection is the real basis for my lists. I gave up all my free time
to do this project, REALLY! I sat for HOURS and HOURS typing
information from my carts, CDs, boxes and manuals. Not to mention
catalogs, magazines and yes even some on-line information. I even
looked at the DP (Digital Press guide) *occasionally*.

2) And for the record, I did an NES list 3 f'n years ago (based
on my 600+ cartridge NES collection, and complete with
cartridge #'s and copyright dates) and never released it. Why?
Because assholes like you wouldn't stop attacking me at the time
(or since for that matter). Well, I am re-editing my NES list into
the new format, and if you say that I stole that one, we will have a
problem, Andrew! Not that we don't already (see above, and below).

3) you are entitled to your opinion, no matter how wrong you
may be, on how my lists look (personally, I find lists that crunch
information into one line "really ugly").

4) you just stepped over the line, Andrew. Accusing me of
plagiarism (you spelled it wrong) AND calling for a boycott of
my business, all in the same message! Who do you think you
are, Paul Smith? I spent much more time than I can remember
putting something together that I felt people could use. Oh, there
are other lists out there, even other collections of lists, and most
are very good, but nobody has done lists for as many systems
AND all in the same standard format (which I made sure included
the information *I* would want in lists if I were starting out
collecting today -- note they are not meant as rarity or price guides,
but rather for TRUE collectors who simply want to know what is
available).

5) if anyone has violated Netiquette, Andrew, its the guy you see
in the mirror when you shave.

You asked for it, you've got it. I'M BACK!

1) someone who hasn't bothered to read the "about" file of that
section shouldn't go around shooting his mouth off. The part
I added to the front of each file is so that those people visiting
my site through an unauthorized link (ie, theft of service, since
I pay for my web site and it is NOT intended to be used as
storage for other sites) would know who was paying for said
storage, and the part I added at the end of each file *IS* an EOF
(end of file) marker. Why people don't just put the manual files
on their own sites I don't know. I have no hold on that activity.
And if you don't like what I did, tough.

2) those who type in manuals, or books, or make copies of
tapes, CD's, DVDs or disks have NO say in how that *pirated*
work is used. That will also go for the manuals I intend to
scan in, when time permits. Why will I do so? Because I feel
that people who have a legally obtained, original copy of a
piece of software and no documentation should have
access to the manual. This or course does NOT include
you "ROM Boyz!"

3) someone who hasn't bothered to read the copyright laws of
the United States (and I even put up links to make it easy for you)
shouldn't go around shooting his mouth off about those who have
done so! The difference, moron, is that those are original work.
Now, if I put screen shots on-line of EVERY possible thing that
could happen in a game, at EVERY possible point, and by
EVERY possible character, then maybe you would have another
point to match the one on the dunce cap you wear. Of course,
I don't know of anyone short of Bill Gates who could pay for the

web site storage. As it stands now, those screen shots reflect
my personal collection and in most cases there is only one for
each game, so your opinion doesn't jibe with the facts.

I do put the manual files in my own web space, thanks. Fortunately, I've
managed to find most of the sites you stole them from, so I don't even
have to strip out your ads. Lucky me.

>2) those who type in manuals, or books, or make copies of
>tapes, CD's, DVDs or disks have NO say in how that *pirated*
>work is used. That will also go for the manuals I intend to
>scan in, when time permits. Why will I do so? Because I feel

When exactly will time permit? That "I have a lot of stuff I'm gonna
scan" note has been up on your site for at least a year and a half, now.

>that people who have a legally obtained, original copy of a
>piece of software and no documentation should have
>access to the manual. This or course does NOT include
>you "ROM Boyz!"

Just to clarify, I'm not a "ROM boy" by any means. Thanks for the
pointless flame, though. It makes me feel all gooshy inside.

>3) someone who hasn't bothered to read the copyright laws of
>the United States (and I even put up links to make it easy for you)
>shouldn't go around shooting his mouth off about those who have

Aren't you going to drag out your tired quote about how nobody is
entitled to their own facts? I just didn't get enough of it on your page.

I, personally, have no real problem with you. True, I think it's rather
underhanded of you to take files that other people have spent time typing
up for the good of the collecting community and plastering ads for your
second-rate business all over it. Sure, it bothers me a bit that you've
got so little respect for netiquette that you pule and whine about how the
images you put on your site are really copyrighted, and belong to you. And
finally, it annoys me that someone whom I have *never* seen post on
r.g.v.c. in my relatively short time of subscription sees fit to make
blanket accusations and denunciations. So feel free to sit in a corner,
reveling in your paranoid delusions and believing that everyone is out to
cheat you of your precious Snappy pictures. Whatever makes you happy.

I think that you are looking for a game called "Journey to the Planets".
It was one of the first games I ever played on an Atari computer. Once
you land on the planet, you leave your ship and solve different puzzles on
each planet to get the object. Hope that helps!
-Nick

Defend yourself as much as you want - via email.

I've seen your site - neat. But I'm sick and tired of the huge waste of bandwidth you have foisted on us in the name of (1) advertising your site and (2) whining about others.

You have a website. As far as I can see, a good one. You have plenty of bandwidth to play with on your own. I, for one, would appreciate a smaller message with a link to the lists on your site instead of having to download the whole thing to my screen.

Multiple huge posts, followed by screaming flames (including this 9-line .sig in each) is not a very effective way to get people to visit your site. I'd rather talk calmly with the few Atari fans left than be forced to wade through your combination flames & Spam.

We don't need the extra grief, and the few who 'attack' you don't need the endorsement a screaming fit from you gives.

Please just chill, and think before you type once in awhile, hah?

I was recently made aware of the fact that my absence has not
lessoned the attacks and lies that *some* of you enjoy posting
about me. As if those pastimes weren't enough for you!

I don't know which one of you sycophants did it, but the message
that was on my answering machine today was going way too far!
It went well beyond vulgar. Well beyond!

I have the tape, and if I ever find out who it was, you will regret
doing it. I personally guarantee that! And if that person happens
to be reading this... SAY IT TO MY FACE, YOU GUTLESS JERK!
Please!!!

[NOTE: To those of you that had nothing to do with this...never
mind.]

Michael
(I stop reading Usenet and only post occasional announcements

1828. Major Atari Sale!

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-20 00:00:00 UTC
From: sripkowski@my-dejanews.com
Message-ID: <6rg4e5$5uj$1@nnrp1.dejanews.com>
Source record: 60594

I am selling the following Atari stuff. All of it works and is in good shape!

Atari 130 XE Computer: $50.00 (w/power supply)
Atari 800 XL Computer: $25.00 (no power supply)
Atari 1050 Disk Drive: $25.00 (w/power supply)
Atari 1010 Tape Drive: $10.00 (in box with everything it came with)
Indus GT Disk Drive: $50.00 (w/power supply)
Indus GT Disk Drive: $50.00 (w/power supply)
Atari CX85 Keypad: $ 5.00 (w/programming manual)
Atari Deluxe Trackball: $ 8.00 (new in box)
6 Atari 3ft SIO Cables: $12.00 (quantity of 6, $2.00 each)
20 or so DSDD disks: $10.00 (hard to find, these are new)
Misc Software as follows:$15.00
Atari Writer Plus (normal/130XE version with disks and manual)
Atari DOS 2.5 (disk and manual)
Indus/OSS DOS XL (disk and manual with synchromesh)
Tons of game and demo software on diskette
User assembled documentaion in Atari 3 ring binder

All for $260. Will consider piecing it out if I am left with enough for a complete system to sell as one. Would really like to sell it all as one big package. Make a reasonable offer and I may sell it to you at that. Anything not sold will got to eBay for clearance so act now!

Buyer pays shipping. Shipping to US only unless prepaid. Funds in US$ only. Cashiers check, money order or COD.

Thanx!
Please reply to 'wade.ripkowski@DIESPAMpsc.bellhowell.com' and remove the DIESPAM from the address.

Nathan,
You can't start the machine w/o a DOS boot disk and then try to load files from the floppies. What is probably wrong is that you need a working DOS boot disk. Also check your cables and be sure the power to the floppy drive is on. These are the common problems when you get a boot error.
If you don't have one, post back and we'll see what can be done for you.

Do you have A.P.E. and the SIO2PC Cable? If so. locate one of the web/FTP sites and download a DOS bootable .ATR image or .DCM file. If you get the .DCM file you will need DOSCOMM32.COM to extract the disk information to a floppy. The floppy MUST be in a valid Atari drive. If you have a working .ATR image all you need to do is connect the SIO2PC cable between a PC and your Atari, run the Atari Peripheral Emulator and format a floppy on the Atari floppy drive.

A.P.E. is available at:
* * * Author of Imagic and APE - The Atari Peripheral Emulator! *
* *
* * * Turn your 8-bit Atari into a powerhouse with APE! *
* *
* * * Ape Homepage: http://www.nacs.net/~classics *
* *

I'm not sure if the SIO2PC cables (premade) are available from him but
instructions to build one should be.

> Marc

Marc,
Are you trying to make an Atari floppy from an ATR disk image ot trying
to boot an emulator from an ATR image or trying to boot your Atari
Computer with an ATR?
If you are trying to use an emulator (XL-It, as you mentioned), check
the command line syntax or menu instructions for using ATR disk images.
I don't have XL-It running here, so I can't give instructions on that
emulator. Some emulators (PC Xformer) uses a command line (c:\XFormer\>
xformer dos25.atr) structure to install an ATR image as a boot disk. In
the line above, DOS25.ATR would be D1: and boot with Atari DOS 2.5.
Atari800Win uses a requestor window to select which ATR image(s) you
waht to load and on which drive ID (d1:, d2:, ...)

uhm, in the hay-day of the use of my 410 some tapes wouldn't work after about 15 days, let alone years....I don't remember how many times I bounced a tape off a wall after spending days typing in the latest 'Compute!' game only to have it be roasted when I'd save it due to a tape problem.

A useless figure. It is not a question of how much is sitting
on your web site, but how it is used. If those 253K of ads
are used on each and every page, your actual commercial content
(that is, the percent of bytes actually shipped to the user)
will be well in excess of the .25% you quote.

> In particular, which of the early computers (TRS-80, Apple][, Atari,
> Amiga...) was the first to provide such a capability?
In the UK we have had Teletext since the mid 70's. This provides several hundreds of pages of info across different channels including news, weather, TV listings, humour etc. Some programs have subtitles for the deaf much like Closed caption in the US.

Teletext is like pages of colour ascii text with some basic graphics shapes and different character sizes. It's embedded in the first few TV scan lines as a data-stream. Some VCRs can pick up on the data and reprogram timer events if a program has slipped due to a newsflash or something.

All you needed was a teletext enabled TV - usually £100 more than a standard one but later on pretty much all TVs had teletext built in.

I say just leave the dude alone. He has every right to promote his business as we all do. It's not like his posts DON'T pertain to the news topics or anything...It's totally relavant. If you don't want to read his posts, then DONT CLICK ON THEM. Hell, I post that I have something for sale EVERY FOUR DAYS until I get it sold or traded....No one seems to bitch about that. Let him do his business in whatever way he feels is appropriate...It's honestly not hurting any of us.

-Tyler

PS> I have never bought, sold, or traded ANYTHING with this joker, but i have respect for his business.

In this case I was the father :) I had a USD 1050 when I picked up the 410
for my younger brother in laws. About 6 months later I got a happy 1050 and 2
other usd1050's and gave the kids a 1050.

I finally gave up on the 410 because the drive belts are worn and the cause of
all the problems. And I'm not in the mood to size rubber bands :) Besides I
just got a SIO2PC cable and quite a few atr files :)

Sigh. classic game overload :)
Mark

If I ever get around to finding rubber bands that fit the drive belt I'll get
it working again. They are kinda stretched. So I gave up.

Yes, I'm trying to boot a disk with DOS on it. I've done it before, but all of a sudden, I can't boot from any of my disks (which all had startup files before). Also, when I try to load programs from BASIC, I get an error #130.
Bye.

: so that i can run it of my PC with emulator.I also have atari 800. Can
: someone tell me if it is posible to copy cartridge and use that program
: with emulator and if so how can i do that!!

There are some PD/freeware programs out there that copies cart to disk,
but this is providing the carts aren't copy protected. Also, it takes
some tricky wiggling the cartridge in while the computer is on and the
program is running. It just takes some trial and error and patience, as
it's easy to crash the computer until you get the hang of it.

There are also some commercial based products that copies most cartridges
(except the kind with bank-switching, if memory serves).

Then all you have to do is upload the files to your PC and run it off the
emulator....

I'm heartened to see that despite your busy schedule of pulling the wings off flies and bitch-slapping retirees you are able to *make the time* to respond to rather mild complaints and amateurish flames with land mines, napalm and automatic weapons.

According to my calculations (flawed, I'm sure) at your current rate in a few weeks you will have pissed on/pissed off/generally abused the few score remaining 8-bit Atari enthusiasts, thereby negating the need to blanket us with your lengthy web-site advertisments.

By All Means, Proceed.

Mark Statzer

I'm on my way to the show tommorrow and wanted to put this up one last
time until I get back. For all those who ordered today(that's
thursday), I will confirm your orders on Monday.

ANNOUNCING THE OFFICIAL WORLD OF ATARI VIDEO!

It's the only one that can USE the name, show you the speakers, get you
behind the scenes, and more! That's right, this is the video to own.
If you can't make it to the show, than this will give you the
experience(compressed down to two hours - think of it as a Blipvert).
If you are going, than this is the perfect way to remember the show.
Here's what you need to know.

All the speakers will be present on the tape.

Auctions, dealer rooms, and the Atari Archives Museum will be on the
tape.

The BattleSphere Tournement will be on the tape.

Extras like direct feeds from the new games and software being displayed
at the fair.

AND MUCH, MUCH, MORE!

How does one get their hands on this tape? Easily! Just go here
http://home.earthlink.net/~santora/woav.htm
and fill out the form. It's that easy! After you receive a
confirmation, send off your check or money order to the address you will
be given and then that's it. Soon afterwards you will find yourself in
possesion of the only World of Atari Video!

ORDER YOURS TODAY!

http://home.earthlink.net/~santora/woav.htm

Keeper411,
Sounds like a bad connection in the SIO link. It could be a bad SIO
cable or SIO jack (probably at the drive end). This happens frequently
on XF 551 drives. The solder connections on the SIO port connectors in
the drive need to be CAREFULLY resoldered. This circuit board has very
thin traces that are easily broken or burnt off. All you need to do is
gently heat each pin of both SIO connectors and add just a small amount
of solder to each one. Don't worry about voiding any warranty. They are
all long out. Make sure you know where all connectors go to before you
remove any. Obviously, you have to disassemble the drive to do this
repair, then reassemble it.

From the description and appearance, this looks like the Instant TV product with the TV tuner removed (not a bad idea, provided is results in a significantly lower price; they seem to be a bit shy about mentioning that on the site).

Huh? If you can't boot from the pc, and you aren't using any other drives,
then how are you loading the cassette image? Or do you mean you can boot
from an image, but not from direct hard drive access?

Slightly confused,
Steven

1857. Does any emulator run Eastern Front? - easternf.atr (0/1)

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-21 00:00:00 UTC

I cannot get "Eastern Front 1941"
to run right on the emulators I
have tried. The best one (David
Firth's, as I recall) comes
close, but doesn't detect the
fire-button/spacebar combination
the game uses to clear the
previously programmed move of
the unit under the cursor. I've
attached "EASTERNF.ATR" for
anyone willing to help.

As a second request, does anyone
have a working FTP site where I
can get the "POKEY" emulator?
The author's site found via the
usual search engines and
referal/review pages has
disappeared.

Thanks in advance for you help,
and I apologize for my naivete'
on the entire topic of Atari
emulation.

>collecting today -- note they are not meant as rarity or price guides,
>but rather for TRUE collectors who simply want to know what is
>available).

HA HA HA HA HA HA HA HA

Let the people decide. Here is my Atari 8-bit list that has been on the
'Net for years and years.

http://www.execpc.com/~krieg/links/8bit.carts

Here is MJNJ's list which magically appeared months ago.

http://www.io.com/~vga2000/vgadkslc/vga-a8bt.lst

You're actually a couple revs behind Mikey. Better do your "research" and
get up to date.

I used to be a customer of yours until I found out how you steal lists,
manuals and screenshots from other sites with no credit given. It is my
right to boycott and to recommend others do so as well. Your ethics are not
the same as mine.

Questron had one of the best endings of any game. I played it, and
may still have it. I'll have to look around for it.

Yeah, Journey To The Planets, by Roklan Corporation. I'm looking at
the cartridge now. :) Very faded, and hard to read.

I would be very interested in how you solved one particular planet
that had lightning, and some kind of machine.

: Yeah, Journey To The Planets, by Roklan Corporation. I'm looking at
: the cartridge now. :) Very faded, and hard to read.

: I would be very interested in how you solved one particular planet
: that had lightning, and some kind of machine.

I think that sounds like the one planet which I never could solve. You put some rock or object into that machine tray thingy, and out came a stick. You took the stick, but I had no idea where to go from there. If you entered the door or went back one screen, and you were back to square one (where your ship was), without the object. 14 years later, and I still can't solve that one planet!

It wasn't one of Roklan's better assembled carts, admittedly. The plastic and ROM inside wasn't exactly sturdy, and the ugly yellow color and poorly faded label made it look like it was homemade. Still, it wasn't bad game; they seemed to emphasize gameplay over graphics, although I think they could have spiced it up a tad...

The 850 interface was/is used as an RS232 port for a modem, and printer ports, there are 3 other ports in the RS232 area will let someone else elaborate on these.

In other words you can hook any modem, or printer to your Atari 8-bit system, modem up to 19.2b printer depinding upon the handler could even be a laser printer?

Source record: 60633

Your problem error 130 is Unknown Device, in other words your computer does not recognize your disk drive as being online. What are you entering to reach the file? It should be something like.

load "d1:filename.bas

This is from basic, now if it is a bootable disk check your drive settings make sure it is on drive one (1). If it is not you will receive boot error, continuously.

Now your drive may be dirty, check the rails the head travels on if you see residue clean them up, check the head it may be dirty, but in this case you should have received boot error. If dirty clean it with a contact cleaner from Radio Shack or equivalent cleaner.

Back to the original post, your computer does not recognize your drive online, check the drive settings. ??

Source record: 60634

Thank you for enlighten me on the drive type. If he has in fact an XF551 disk drive and the computer does not recognize it then forget what I posted in the other message. Go to Radio Shack and buy a cheap soldering iron and a roll of solder. Take the unit apart and look at the traces on the SIO Ports. If there is any small circular units in the solder on these, you may have to use a jewelers magni fine glass or just a magni fine glass to see where the solder has been cracked, you need to either put another solder joint on top or place a wire from one section to the second SIO port. Typically common in the XF551 as the ports were not locked down by a rivet or bold..to eliminate the problem in the future, drill a small hole in both sides of the SIO port you see where they are and through the circuit board, no you won't hurt the board put a screw and nut in these will prevent future problems.

```
Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs
auction.

Rules: 1. Auction ends September 11th (no going once, going twice
stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. There is no rule 5.
6. Please send the number of the game you are bidding on (ie. 002
Berzerk)
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200
-----------
Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label)
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) min $5
010 Jungle Hunt
011 Kaboom (label wear)
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon
```

019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) Min $10

Atari 400/800

Minimum bid $1, Minimum increase .50

022 Alien Garden (label wear)
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling)
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) Min $5
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked)
039 Q-bert (no end label)
040 Sky Writer
041 Thunder Fox (Complete) Min $5
042 Wizard of Wor

Atari 2600
---

043 Double Dragon (PAL, New in Box) Min $5

043 Atari 2600 jr. (with power supply) Min $10

2600 Instructions (Minimum .50, Increases .25)

044 Combat (small booklet)
045 Asteroids
046 Missle Command (Multi-language)
047 Bowling (small booklet)
048 Bowling (small booklet)
049 Basketball
050 Defender
051 Sprint Master (small tear)
052 Moon Patrol (Multi-language)
053 Battle Zone (Multi-language)

Intellivision
---

054 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
055 Chip Shot Golf (with instructions) Min $5

1872. Re: DK-Utilites by Dan Knauff

Newsgroup: comp.sys.atari.8bit

From: BobKlaas <bobkla19@sisna.com>
Message-ID: <35DE0213.BC2A1829@sisna.com>
Source record: 60636

Sorry thought most were familiar with the use of DK-Utilities.

DK Utilities is a sef of utility programs intended for use with Sparta Dos, the Black Bos, and at least one hard drive. These Utilities can all be used from the Sparta Dos command line or from within batch files. A few work with any Dos. Those that do are so indicated in the documentation. SOme will work with the MIO as well.

One of the grest strengths of Sparta Dos is the ability to run batch files. Includes is Bootmenu.com which allows you to select one of up to 31 batch files when you boot up your computer.

BBFIG you can load and save the main configuration table of the Black Bos or MIO to/from a disk file. If you are using a black box you can print your black box configuration table from a disk file.

There are many uses for the Black Box and a MIO user, along with BBS Express! Professional (tm), Command files for both.

>(that is, the percent of bytes actually shipped to the user)
>will be well in excess of the .25% you quote.

You asked for it, you've got it. I'M BACK!

1) A totally valid figure, since those FS/T lists that everyone has a
stick up their ass about can be accessed from ONE bullet only
(on the main page). Nobody is forced to make that choice. If they
want to look they click the bullet and enter that section, and if they
don't want to look they DON'T have to do so.

2) the actual figure is less than 1/4 of 1% (253KB = 259072 bytes
and then 259072 / 110000000), and not ".25%", as YOU (not I) stated.

3) I'm glad to see that the trend on Usenet of commenting on
something/someone that you don't even know and have not
even checked out continues. It makes winning these little

debates you people start all the time that much easier. :)

Michael
(I stop reading Usenet and only post occasional announcements
for two years and they STILL attack me. You people are f'n sad!)

You asked for it, you've got it. I'M BACK!

1) there is no "perhaps about it". I did not even know until AFTER
I put my initial 32 lists (of 40) on-line on 07/19/98 that you even
did lists. Someone sent me e-mail telling me that your Atari 8-bit
list was better than mine and I said to him, "Andrew did lists? I
know him." I don't give a rat's ass if you believe me, because I
know its the truth.

2) no, asshole, I've already done one, AS I TOLD YOU. I have over
600 games in my personal NES collection (I'll bet you did yours from
ROM's, didn't you!) and the data on most of the ones I don't own.
Please learn to read. I also did an NES FAQ (at the same time) and
it went unreleased for the same reason given above. They will
eventually both see the light of day, after modification (both were
done in 1995 so the FAQ needs tuning and the list is, as I said, in
the ugly one line format I originally did that in). Again, I know
this is true, so what you believe does not matter.

3) I did not say that, and a quick read will prove that (go ahead,
I'll wait for you)... see. Again, I didn't even know you did lists
until AFTER I put mine on-line. What I said is that one line lists
are ugly because they cram information into a single 80 column
line. PERIOD. Thats why I took a multi-line approach. And thanks
for agreeing with me!

4) now I know who you remind me of...Andy Andy from Cheers!
You are insane! You act like anyone with the same data as you

MUST have stolen it from you!?! Earth to Andrew, other people own game collections too (and most of us don't base ours on ROM images).

And here is Dean Dierschow's list, which has been around a hell of a lot longer than yours, Andy Andy!

http://www.xocolatl.com/carts/at800.html

Any similarity indicates that we all three did lists for the same system.

Do you have lists for all of these? Does anybody (besides me)?

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Amiga (?Commodore?) CD32
Atari Jaguar / Jaguar CD
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
Turbographx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade
Colecovision
Emerson Arcadia 2001
Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2

Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

5) Thats right, you USED to be a customer. Then you decided to spread lies about me and attack me on Usenet. I have not stolen a DAMN thing from anyone. My screen shots are 100% original, every damn one, and I own the original software. Jealous, ROM boy! And just like EVERY video game magazine claims ownership over their screen shots (while stating that trademarks and characters are retained by their respective companies) I do the exact same thing (ditto). I spent the money buying the games (and equipment to take the screen shots), and spent the time sitting at my computer (with Snappy hooked to my game systems) "snapping" every damn one of them!

As for the manuals, I never said that I typed those in, in fact I clearly said that I did not. I did re-edit all of them, and I clearly said so. One more time, the manuals that people type in, no matter how well intentioned they are, do NOT belong to them. Type in a Tom Clancy novel and try to claim ownership over it. Good luck! And that goes for the manuals I will be scanning too. You software pirates have a REALLY warped sense of values! Check the FAQ section of my site. Original work is ALWAYS credited!

The truth is, *I* did those game lists. *I* worked HUNDREDS of hours on them, over several months. *I* pulled out my ENTIRE (very large) personal collection to work on them. When VGA business was slow (and since I'm mail-order only that does happen) I'd work on them for 20 or more hours a day. *I* gave up ALL of my free time. *I* even put in some 36 hour days, working only on the lists. By the time *I* decided to put them up if I finished 75% of them (30 out of 40 lists) *I* could hardly type because my wrists hurt so bad, and *I* was actually starting to have dreams about typing (I don't even want to know what that might mean)!

If I'd done what you claim I did, they would have been up in a week.

6) Thats probably why I'm so damn mad. I can't believe that I put in all that hard work, to give something nice back to the video game community and then a total asshole like yourself comes along and

attacks me, lies about me, makes unbelievable accusations and
then, THEN has the nerve to call for a boycott of my business!

7) You are right about one thing, Andy Andy, "your ethics are not
the same as mine". I would NEVER have made the kind of
statements about you in public that you made about me. If I
had concerns about you I would have talked to you first!

Michael
(I stop reading Usenet and only post occasional announcements
for two years and they STILL attack me. You people are f'n sad!)

You asked for it, you've got it. I'M BACK!

1) funny, if someone posts lies about me and attacks me then I
reply. If they don't then I can't. And if you don't like it, tough.
Stop, Matthew Gracie, and I won't have to defend myself!

2) as for the manuals, I never said that I typed those in, in fact I
clearly said that I did not. I did re-edit all of them, and I clearly
said so. One more time, the manuals that people type in, no
matter how well intentioned they are, do NOT belong to them.
Type in a Tom Clancy novel and try to claim ownership over it.
Good luck! And that goes for the manuals I will be scanning too.
You software pirates have a REALLY warped sense of values!
Check the FAQ section of my site. Original work is ALWAYS credited!

3) you can't use a calender, can you. Thats okay, I'll help you out
(I can't believe I'm going to do this):

from my update files (mostly)

07/1997 -- manual archive starts (late in month), ends early 08/1997
08/1997 -- I buy a scanner, I also start catching crap
from the manual archive. I put ALL plans to scan my
manuals on the very farthest possible back burner

12/1997 -- more original game screen shots added
01/1998 -- more original game screen shots added
02/1998 -- FAQ section is overhauled
02/1998 -- work starts on game lists (unannounced)
04/1998 -- more original game screen shots added
07/1998 -- HTML work done on site
07/1998 -- game lists released (as stated on site, I
decide to take some time off -- see below)

Of course I'm also running VGA and living my life
during this time period.

Thats NOT "at least a year and a half, now". As of
today (08/22/1998) its about a year.

4) I'm sure you are, and you just don't want to admit it.

5) my "pathetic retreat to name-calling"!?! There you go,
ignore the facts about copyrights and focus on the fact that I
called you a moron, AFTER you called me a name three f'n
times in your message! You are deranged.

6) well you aren't! You guys don't even read the damn
copyright laws (I put up links AND even quoted the
relevant sections so you'd know where to read) and
then you make idiotic statements and act like they
have some basis in fact. Opinions do NOT matter
here. It doesn't matter what you think or feel. This
isn't outcome-based reality!

7) I personally have a big problem with you. I think it's rather
underhanded of you to post about someone you don't know and
attack them / lie about them, all for the benefit of your second-rate
ego. Sure it bothers me a bit that you've got so little respect for
netiquette that you launch ad hominem attacks (by the way, the use
of pule makes the use of whine redundant) and fail to even look
up the copyright information (despite the fact that I did all the
"leg work" for you) yet feel that you can tell us all what the law is.

My screen shots are 100% original, every damn one, and
I own the original software. Jealous, ROM boy! And just like EVERY
video game magazine claims ownership over their screen shots (while
stating that trademarks and characters are retained by their
respective companies) I do the exact same thing (ditto). I spent the
money buying the games (and equipment to take the screen shots),
and spent the time sitting at my computer (with Snappy hooked
to my game systems) "snapping" every damn one of them!

And considering that you first posted to RGVC on 12/08/1997 and I
first posted there in 05/1994... oh, I'm sorry, you are the guy who
has a problem with calenders! 1994 was *before* 1997, just so you
know. And I only posted concerning you because you saw "fit to make
blanket accusations and denunciations" about me. Go check *your*

last message!

If anyone needs to sit in a corner, its you. As for paranoid, you again. I only reply to what others post (and only those who post). If you stopped, I'd get a lot more done around here (and I did, for two years). Delusional, you again. You don't even remember starting this between us. If this makes you happy, go ahead. I'll reply if you do.

The truth is, *I* did those game lists. *I* worked HUNDREDS of hours on them, over several months. *I* pulled out my ENTIRE (very large) personal collection to work on them. When VGA business was slow (and since I'm mail-order only that does happen) I'd work on them for 20 or more hours a day. *I* gave up ALL of my free time. *I* even put in some 36 hour days, working only on the lists. By the time *I* decided to put them up if I finished 75% of them (30 out of 40 lists) *I* could hardly type because my wrists hurt so bad, and *I* was actually starting to have dreams about typing (I don't even want to know what that might mean)!

If I'd done what people claim I did, they would have been up in a week.

Thats probably why I'm so damn mad. I can't believe that I put in all that hard work, to give something nice back to the video game community and then total assholes come along and attack me, lie about me, make unbelievable accusations and then, THEN have the nerve to call for a boycott of my business (Andrew Krieg)!

>Defend yourself as much as you want - via email.

This was started by others and in public (on Usenet) and it will
end there. If you don't like it, tough. My e-mail is for business.

>I've seen your site - neat. But I'm sick and tired of the huge waste of
>bandwidth you have foisted on us in the name of (1) advertising your
>site and (2) whining about others.

I'm glad you liked it. But I'm sick and tired of people launching
attacks on me and spreading lies. The only thing that bothers me
more than that is idiots who keep insisting that I'm to blame for the
whole thing once I start to defend myself. Get a f'n clue. I would
NOT have to post like this if people didn't start this shit. I have
NEVER started anything with anyone, ever! And there is no
whining, just the practice of self-defense.

And posting an announcement of useful FREE information once a
week is nothing to complain about. There are people who actually
do a lot worse things on Usenet. Look around some time.

>You have a website. As far as I can see, a good one. You have plenty of
>bandwidth to play with on your own. I, for one, would appreciate a
>smaller message with a link to the lists on your site instead of having
>to download the whole thing to my screen.

You don't have to download anything to your screen (unless your
Internet set-up is total crap, in which case I'd suggest you upgrade
your equipment/software).

>Multiple huge posts, followed by screaming flames (including this 9-line
>.sig in each) is not a very effective way to get people to visit your
>site. I'd rather talk calmly with the few Atari fans left than be forced
>to wade through your combination flames & Spam.

The posts are "huge" because I'm quoting back the attacks and
lies that others are posting about me (you know, the people who
started this). I do NOT flame. I reply to attacks and lies. Period.
Sig-file length is not relevant. I'd hope that people would want to
do business with someone who is honest and is willing to stand
up for themselves, especially when they are not wrong. I sure know
I want to do business with someone like that.

You are entitled to your opinions, no matter how wrong they are.

>We don't need the extra grief, and the few who 'attack' you don't need
>the endorsement a screaming fit from you gives.

And I need the extra grief from those who have nothing better to do
than attack and lie about people and then try and injure their
business!?! Again, seeing someone else in this position, doing
what I'm doing (as stated above) would put that person near the
top of my list of people I'd trust.

>Please just chill, and think before you type once in awhile, hah?
>
>Mark Statzer

I will not sit back and take this kind of abuse, and the fact that you
expect me to do so says a LOT about you. You should be posting
to them instead! I was gone for two years (see below) and I kept
getting e-mail from customers saying "they are attacking you on..."
and I let it go. Not anymore!

[MY SIG FILE DELETED]

And if you thought it was a waste of bandwidth, why the heck did you
quote it back!?!

> > stick. You took the stick, but I had no idea where to go from there. If
> To this day I've never figured that damn game out!! What happens when you
> win the thing?

That's the same planet that had me stuck for ages. Without going into
too much detail and spoiling the rest of the game.. take the stick to
the left, until you reach the flashing door/portal that takes you back
to where your ship is, but don't go through it. Stand at the top of
the hill on that screen, near the edge, where it drops down to the
door. Drop the stick, stand on top of it, and push the joystick
upwards... that should give you enough to finish that world (and the
game).

What happens when you win? Well, you go back home! Which I
think was the point of the game (memory is a bit fuzzy on that one).
There are still a couple of other bits you need to figure out before
you can finish the game, but they're not all that hard.

>
Since you mention batch files, I got a question on FidoNet that somebody
here might be able to answer.

The guy who asked vaguely remembered a German disk that was supposed to
provide a batch language for MyDos. He remembers that some of the commands
were preceeded by pound signs and that the disk had a special loader and
the directory was not in the customary place.

Does that sound familiar to anyone? The guy has since lost the disk and
would like to find another copy. He's got me curious, too.

In article <35DDF497.DD435756@sisna.com>, BobKlaas <bobkla19@sisna.com>
stated:

> Ebay may be fine for some. If you are offended by my posts which I do
> limit, then bypass them.

The problem may have been the use of "FS" in the header, rather than
"FA", which would defeat the purpose of having a filter set to delete
auction posts. (I sometimes buy via auction, but typically when I want to
buy, I like a fixed price, which is also why I skip any post that
mentions only "make offer").

Someone posting an auction item as "FS" is only a minor irritant to me,
however, especially compared to someone who posts an item as "FS" with a
good price, and then when you get into the message, you find not only is
it for auction, but that "good price" is either the current bid, or worse
yet, the minimum starting bid.

Does anyone have the Atari/Ingersoll newsletters from the 70s/early 80s when Ingersoll were marketing the VCS and 400/800 in the UK? I would like to put them on a webpage but, unfortunately, my complete collection is no more.

Gareth.

You know, since you've got an 'upgraded' internet setup, you should note that this posting and followups do not really belong in the newsgroups being cross-posted. With this internet setup, you could easily control that.

I have now set followups as to avoid comp.sys.cbm, and hopefully we all can live in peace. :)

I was going to stay out of this, but some of the things you claim are outrageous.
>Do you have lists for all of these? Does anybody (besides me)?
>Amiga (?Commodore?) CD32
How can you write a list for a machine you are unsure about the manufacturer? My CD32 quite clearly has Commodore written on it, and every single one of my games also has Commodore written on both the CD and sleeve. It must have been a great task for you to do a list (supposedly) looking through all the CDs without seeing Commodore once. For the record, a list of all CD32 software appeared on an LSD Docs disk, which are (surprise surprise) available on-line on the net at the Lazarus site.
>Commodore 64 / 128 computers
Now this makes me laugh. How can you claim what you claim below when your site has the entire same list as Martin Pugh's? Martin I know for a fact has tirelessly compiled a comprehensive list, and also indexing to a whole load of sites for disk images. He is a purist in the great sense, and I hear he even added intentional typing errors to see if you even bothered to check through the list before you copied it up. Unsurprisingly, this is exactly the case.
>I have not stolen a DAMN thing
>from anyone.
Liar. That's not even slander. It's truth.
>The truth is, *I* did those game lists. *I* worked HUNDREDS of
>hours on them, over several months. *I* pulled out my ENTIRE (very
>large) personal collection to work on them.
You must have a hell of a collection to have every single disk/tape/cartridge on every single system that you quote. Your house insurance must be huge.

Your petty attempts at justifying yourself, and lying further, impress noone. I would not buy anything from you and I would urge others to do the same. You *are* a plagiarist. If you use other people's lists, you should at the very least credit them for the list, if not link to it, and if you have any ounce of decency you should ask them *before* you go ahead and use it. And in your own name....

Stealing peoples' manual typeouts and not even leaving their credits
in it - that's beyond wussy, and you'll burn in hell for it.

Just thought I'd share that.

*** REPLY BEGINS ***

As for the manuals, I never said that I typed those in, in fact I clearly said that I did not. I did re-edit all of them, and I clearly said so. One more time, the manuals that people type in, no matter how well intentioned they are, do NOT belong to them. Type in a Tom Clancy novel and try to claim ownership over it. Good luck! And that goes for the manuals I will be scanning too. You software pirates have a REALLY warped sense of values! Check the FAQ section of my site. Original work is ALWAYS credited!

"Burn in hell"!?! You software pirates have a rather warped sense of right and wrong. Just thought I'd share that.

```
: That's the same planet that had me stuck for ages. Without going into
: too much detail and spoiling the rest of the game.. take the stick to
: the left, until you reach the flashing door/portal that takes you back
: to where your ship is, but don't go through it...

Thanks for the tip. I went back and finally won, 14 years after getting
the game. <sigh> Although, it took me over two hours to finish, as I
hadn't played the game in so long -- I had the darndest time passing the
planet with the gunslinger. I guess my reflexes aren't what they used to
be. That planet that had me stuck now seems like one of the easiest in
retrospect. Still, it was nice to actually see a conclusion and a "game
over" that was for real and not because I lost all my energy!

I just wish the finale on the home planet was a little more interesting;
after all that aggravation it amounted to nothing more than a slight pat
on the back...

Guarantee you if he/she has a XF551 disk drive the problem is not there
but in the Traces on the SIO port, unlikely but perhaps one of the drive
select switches is stuck, other than that bet on the traces.

But what heck try anything once if it works so much the better if it
doesn't then attack from a different angle.

I personally don't like auctions, have been to several and one tends to get in to the (feeding frenzy) as they call it and generally over pay for an item. Live computer auctions are a lot of good entertainment if you go check out the items set a price and stick with it. Then when bypassed just watch those caught up in the frenzy..

You can't have that I want it and I am going to get it no matter what!

There is a large Atari symble in Atascii graphics out and about perhaps someone has it on the pc and could send it to you, don't know if an emulator could reproduce it in pc format or not?

bob

Meanwhile will look for some larger images on boxes I have and see if I can scan it or video cam it to pc format?

bob

1903. Re:Your Web Sight

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-22 00:00:00 UTC
From: BobKlaas <bobkla19@sisna.com>
Message-ID: <35DF5220.35F6FF04@sisna.com>

I just visited your Web Sight and as you stated it is not elaborate as it could be or as many others are. It is a fast and easy to maneuver system.

None of the text files you have up are any different than those posted as game help files that use/still are up on the old Atari 8-bit system BBS's.

You have stated in your screens you have edited cleaned up ect. I personally don't see a problem with your sight. Game Hints (perhaps you should switch to this) Name as that is how they were portrayed on the BBS's, not actual docs. Many did not give complete info intentionally as they were suppose to be written by users of the game to help others get higher scores or even complete the games. Atari, and other Software Developers never gave any of the original BBS's SysOps any flack on what their users had posted. It is general knowledge that a game produced by Boarder Bond was theirs not anyone else's game!

You have spent a lot of time setting up a helpful sight and hopefully you will not be discouraged by a few. I am sure there are 100 to 1 who appreciate your efforts.

I don't usually visit this type sight but the continual harassment on you tweaked my interest to see just what you had available. Perhaps your hits will also be tweaked by the derogatory statements or others?

Hang in there and best of luck to you.

Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

```
Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends 12:00 am September 11th (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. There is no rule 5.
6. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200
-----------
Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label)
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear)
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon
019 Star Raiders (with instructions)

020 Football Play books Min $1
```

021 Wico Joystick (with Y-adapter and Box) Min $10

Atari 400/800

Minimum bid $1, Minimum increase .50

022 Alien Garden (label wear)
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede

Periodically, I use one end of a cotton swab dipped in alcohol to clean the rails the head slides on. Then, I put a couple of drops of *light* machine oil on the other end of the swab and wipe it on the same rails. Quiets the drive right down. I could be wrong, but it stands to reason to me that all that groaning it does when those rails are dry can't be good for it...

Source record: 60522

All disk drives need periodical cleaning. Depending upon where you are in the country/world. Different climates reak havoc on all drives some fair better than others. If one never has a problem in many years the so much the better for you. There are users across the world that have salt water in the air and it causes corrosion on the rails, or just corrupt build up on the head. These need attention. So if you live in a dry climate, no 100% humidity then you actually have very little problems with any drive..if the climate varies then so does your mainance on your disk drive. Only dessert climates work exceptionally well on disk drives but even then crap builds upon the rails and needs to be removed.

Good luck with your climate, and your drives.

OK, I've seen this go on long enough. You keep spouting off about all
the hard work you put in typing in those lists. And yet you also refuse
to acknowledge the individuals who did all the hard work of typing in
the manuals you have online. It was only after a raging flamewar on rgvc
that you conceded on your page that you did NOT type the manuals
yourself (granted, you never claimed you did the work yourself either).
And yet you still refuse to thank those individuals who did all that
work for you. It's a matter of courtesy.

Hello.

While I'm no lawyer, I think the above explanation misses the mark somewhat. Let's start off with an example: Someone named Mort types in a manual for a classic game, Archon.

He decides to post it on the Web for others to read, enjoy, use along with their ROM or disk image, etc. It is quite true that Mort does not own the copyright to the Archon manual that he just typed in.

But, copyright has slender reeds of ownership that one can attach themselves and accordingly be subject to a hierarchy of ownership. In this case, Mort formatted the Archon manual for internet WWW usage. Mort could claim copyright ONLY for the HTML formatting that he used for the Archon manual. However, Mort would still be subject to the original copyright owners of the Archon manual, as he does not own the CONTENT.

Of course, Mort has no defenses, if someone copies his manual and changes the formatting to that of 80 column text or whatever. Mort only has a fragile and truly slender reed of ownership only to the HTML formatting of the Archon manual. And his ownership could be easily negated by the person possessing the copyright to the contents of the Archon manual.

There is an another issue, which I think you totally overlooked. From repeated postings, I get the impression that you are running a commercial website. In short, you try to make some money off these classic games, etc. That's fine, as I have no problem with that. You also run a website devoted to the archive and reference of classic software works so that others can read and enjoy. Usually, there's no charge to view these works online. That's cool.

However, in doing so, and if it is proven that you are using other works that people have spent hours typing in, etc., you could be liable under U.S.'s unfair competition laws. Your website directly competes with other websites

offering such services such as archivial and reference works on classic software for classic machines. By engaging in such pattern of using these documents typed in by others who are basically your competitors, I believe that it is unfair competition.

Lastly, I have set follow-ups as to avoid comp.sys.cbm. :) Please, do not post further in these newsgroups, etc. Thanks.

-Todd Elliott

1927. JAM!! device update

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-23 00:00:00 UTC
From: lmcclure@ibm.net
Message-ID: <MPG.10498cbf524e0a259896d5@news1.ibm.net>
Source record: 60530

I did a bit of checking on the JAM!! device from AIMS Labs that Bob Malay mentioned in a post here. It appears my assumption was correct, that it is essentially their Instant TV, sans the TV tuner, and with a lower price. The price at one online source I found, Electronics Boutique's website, was just under $80 (about $20-$40 less than Instant TV).

For those of you who missed the original message, JAM!! is a device that converts composite video or S-video (chroma/luma) into VGA-compatible output (I.e., analog RGB at 31.5Khz horizontal scan rate).

Oh, boy, I've been looking for an on topic opportunity to use this line for some time. Our ole buddy, the ever vindictive M. Novak said:

>2) the actual figure is less than 1/4 of 1% (253KB = 259072 bytes
>and then 259072 / 110000000), and not ".25%", as YOU (not I) stated.

Do the math.

1/4 of 1% = .25% Your exact formular above comes to 0.00235. Rounding to four places makes it 0.0024, with is close enough to .25% that for "casual" conversation, it is the same. And by the way, if you are going to get so picky on exact memory sizes, give of the precise memory size of the entire web site, same as you did on quoting the memory usage of the "commercial content."

You realize that if this were being used in any kind of legal case, you have so many flaws in your "defenses" that even a newly barred lawyer could pick them apart.

Its a full possibly copy protected image made with Steven Tuckers
excellent APE pro system software and hardware (cable). It reads most /
all types of disk protection in and makes an image of it on the PC..

Bad news is that it can only be reloaded onto a real Atari via the APE
software. So no emu use....

Steve, could the emu's be made to read a pro image in? Just wondered.

1932. FS: Big Atari 8 Bit Sale

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-23 00:00:00 UTC
From: sripkowski@my-dejanews.com
Message-ID: <6rpjr1$d6p$1@nnrp1.dejanews.com>
Source record: 60535

I am selling the following Atari stuff. All of it works and is in good shape!

Atari 130 XE Computer: $50.00 (w/power supply)
Atari 800 XL Computer: $25.00 (no power supply)
Atari 1050 Disk Drive: $25.00 (w/power supply)
Atari 1010 Tape Drive: $10.00 (in box with everything it came with)
Indus GT Disk Drive: $50.00 (w/power supply)
Indus GT Disk Drive: $50.00 (w/power supply)
Atari CX85 Keypad: $ 5.00 (w/programming manual)
Atari Deluxe Trackball: $ 8.00 (new in box)
6 Atari 3ft SIO Cables: $12.00 (quantity of 6, $2.00 each)
20 or so DSDD disks: $10.00 (hard to find, these are new)
Misc Software as follows:$15.00
Atari Writer Plus (normal/130XE version with disks and manual)
Atari DOS 2.5 (disk and manual)
Indus/OSS DOS XL (disk and manual with synchromesh)
Tons of game and demo software on diskette
User assembled documentaion in Atari 3 ring binder

All for $260. Will consider piecing it out if I am left with enough for a complete system to sell as one. Would really like to sell it all as one big package. Make a reasonable offer and I may sell it to you at that. Anything not sold will got to eBay for clearance so act now!

Buyer pays shipping. Shipping to US only unless prepaid. Funds in US$ only. Cashiers check, money order or COD.

Thanx!
Please reply to 'wade.ripkowski@DIESPAMpsc.bellhowell.com' and remove the DIESPAM from the address.

Well, I'm tired and got home just a bit ago but I wanted to say few
things.

The show was great. Kudos should be put out to everyone involved
especially Richard Tsukiji,Keita Iida, Don Thomas, and John Hardie. They
all put on a most excellent show. Of which I was more than pleased to
shoot over eight hours of video to whittle down to a two hour video. The
speakers were engaging, the exhibits were interesting, and the
atmosphere was light. Everyone involved seemed to have a good time.

As for an indepth report, you can read it tommorrow at NGO.

As for the Video, I will update my page with some stills from the video
once I've logged the tapes and gotten some sleep. But here's what I can
tell you to wet your appetites.

Jeff-
Thanks for the info. As I read the info at their
site, I interpret that this device plugs into
the back of a PC into the VGA card,
allowing input of the composite signal to
the card, and the card sends the signal out
to the VGA monitor. So you have to operate
the PC to get the composite picture. (?)
This is really a question, since it doesn't seem
logical, but the info mentions "loopback".
Anybody got one of these critters? A
stand-alone would be better, but probably
much more expensive.
Larry

Ape is an invaluable tool for those that want to convert their old and
not so trusty disks to safe PC images. There is nothing that will make
your poor old Atari feel more happy to be linked to....

Its so easy to use and has an incredible set of features...Get it now!!

And register it if you can to support its dev, I will as soon as I can
get another job!! ..... sometime this century :(

I have to add to Mark's comments:

The show was great. The vendors had some excellent stuff for sale. The Jaguar System Test board I bought is great. Now I just need to figure out how to use it.

There were a lot of past Atari employee's (engineers and programmers, not marketing bozo's). Jerry Jessop, Dan Kramer (5200 trackball designer), Dave Stagus (my spelling is bad; programmer for Exidy's Venture arcade, Jaguar ROM programmer, 2600 programmer), Rob Fulop (2600 Night Driver & Missile Command, Night Trap and Sewer Shark programmer), and many more. They were all great individuals to speak with. They were happy to speak with fans and were right there the whole time enjoying the show with everyone else.

Curt Vendel had an excellent display of some very rare Atari stuff. The self-centering 5200 joystick, a early design of the 1450XLD, a 1400XL with the actual name plate on it (mine is missing that), cartridge prototypes, and much more.

They had a museum that was incredible. One of the neatest things I saw was a piece of hardware that was the actual court evidence used in the law suit against Coleco by Atari. It was a Colecovision 2600 adapter that was hooked up to a board containing basic resistor/inductor/capacitor and other components. This was used as proof that Coleco had copied the 2600 and that the Colecovision was not actually running the 2600 software, it was being used as a television interface. And that was just one of many rare items they had on display.

All kinds of arcade games to play that were set on free play!

Keep an eye out, because there should be another one next year. This is one not to miss!!!!

One question-- did you whittle down the auction footage as well?

The show was great, the speakers excellent, and the museum was wonderful.
However, 90% of the auction was either junk that someone should have known
better than to try to sell, especially at the minumum bid price, or things
that were outrageously overpriced.

It was great to realize that not all of us collectors have lost our minds and would pay any price just because something has a Fuji symbol on it.

A plastic Atari cartridge organizer for $50? I don't think so!

Mark

God, this is getting old.

I deeply and humbly apologize for anything that I may have said to
impinge upon your doubtless sterling charachter and business acumen.
Obviously I have met my verbal match and will simply bow out gracefully,
content in the knowledge that my hitherto favorite newsgroup has, at
your able hands, denegrated into verbal fisticuffs because - well I
really don't know. All I remember seeing was a few messages pertaining
to message length and past dealings, and when I complained about the
general lack of civility, it turned into a full-scale, four-alarm,
hair-pulling, teeth-grinding, name-calling Bitchfest.

> Where you do get this stuff from? You said that I engage in

You know, this is a rather large waste of my time as well. Which is why
you no longer need to bother yourself with my presence, as I will sign
off and wait a few weeks until the vitriol has settled and we can return
to talking about Atari's. (note ng name - news:comp.sys.atari.8bit)

> And as for your accusation that *I* am pissing people off,
> wrong. I'm the one who is now pissed off, and I'm the only

> who is being attacked and its my business that people are
> (based on the above false information) calling for a boycott
> against.

I may be completely out in left field here (I'm only a TV guy) but I
have trouble believing that this is kind of like...I'm looking for a
word here and I just can't place it...'rabid paranoia'? Isn't
this...counterproductive?

Do you really expect someone who happens onto this newsgroup, reads the
messages (*all* of them) to then say "This sounds like a business I need
to check out!"? I realize that business on the Internet is rather
different, but if I stop by a business, and before I step in I hear a
knock-down screaming fight (complete with cursing), I tend to shy away -
for my own health.

This is *similar*, except it feels like you came storming in here with a
massive chip on your shoulder (apparently initially generated elsewhere,
if I read your other posts correctly) and proceed to foam, froth, and
generally stomp over not only everyone who 'slandered' you, but
subsequently everyone else who bothered to make any noise afterwards,
including two guys with a fire hose
(http://work.ucsd.edu:5141/cgi-bin/http_webster?isindex=sarcasm&method=exact).

> If this stuff bothers you so much, and its such a huge waste of

> you did that, then I wouldn't have anything to post replies to!
> But no, you are too busy posting your own little attacks (funny
> how those are'nt a waste of bandwidth, you hypocrite).

Because I am an adult, and have learned that false accusations are only
defeated by either ignoring them, or answering the charges and proving
them wrong calmly and rationally. I've given up on the former, and
hoping for the latter.
My deepest apologies for wasting further bandwidth - this will no longer
be a worry for you, I hope.

> I have nothing against anyone on any of the newsgroups that

Son, not *everyone* is your enemy. I know this seems flippant of me to say, with <metaphor> the hounds baying at your door </metaphor>, but when all this started you could have simply stated your side of the argument calmly and rationally without kicking ass and all of this would have gone away.

> And one more time, for the record, those are announcements
> of FREE, useful information. I only post it once a week. If you
> don't like it, skip over it. Even a guy like you can exercise the
> little bit of self control required to do that.

You know, I'd seen those postings occasionally over the last year or so. I believe I've actually looked at the site once or twice. And yet, after this little tete' a tete' we've had here, I can't imagine anyone who has read these messages will read a message with your name on it ever again. It's not a mistake I expect to make ever again. I could be wrong - I often am. (<--here's that quote you wanted)

> the manual archive, to those who typed them in.

Hmmm... where did you put the thank you? I didn't see a single individual credited for their work. Not one name. That's how credit works, you see. You gotta name who you're actually showing appreciation to.

>
> 4) Wrong. After what happened on RGVC I capitalized the "thank you".

Since I don't have access to old revisions of your website, this will always be a matter of your word against mine. But I am quite certain that you made no reference to the labor of others or the sites you got the files from when this whole thing blew up last year.

> 6) Again, they were thanked, from the beginning, just not in
> the 'ass kissing, give credit where it isn't due for merely pirating
> a manual' way that they wanted. You see, I don't give in to
> blackmail or terrorist threats.

Oh, I see. We should all sympathize with you and appreciate your hard work for all the time you spent typing in those lists, but to hell with those who put in similair labor typing in the manuals? Nobody ever said you should credit them for creating the manuals, just for the labor they put in. Nothing more. I don't see how that amounts to terrorism or blackmail. (I take it you are referring to those who are 'boycotting' your business, and a boycott is neither terrorism or blackmail.)

BTW, my apologies to all the newsgroups that have been dragged into this. I am removing the TI and CBM groups from the header of this message in response to the many pleas from their members that this

thread disappear from their groups, but I suspect Mr. Novaqk will bring it right back to you. I'm willing to take it to e-mail, but he won't.

I have a feeling the r.g.v.c. "attacks and lies" (this phrase copyright 1998 by Michael J. Novak Jr) portion of Mr. Novak's posts will soon be expanded to include several other newsgroups. I wonder if I'll get my own "The Truth About" section on his website?

Hey Mark!

I agree with that! It was pretty funny how nothing sold, but I wish there had been a little more heckling at the prices. The lady who bought her 10-year-old son the Atari pin got bit on the ass. Hopefully people won't take that at the going rate and start upping their prices accordingly. Especially after the other pin went to Nowheresville at $25.

Without regards to the fact that newsgroups are international forums,
I'd remind you that in the good old U.S. of A we do have the right to
engage in rhetorical hyperbole.

Most of us here are even smart enough to recognize it.

If you decide to think for a second or two before posting another string
of tirades, perhaps you'll realize that you brought about most of these
replies with your own obnoxious, netiquette oblivious posts (such as
your stupid reply to this rhetorical hyperbole claiming that it was a
factual statement about you.)

Keep replying this way and you'll get people to believe the rhetorical
hyperbole...

>
>What are you arguing about here? .014%? 1/4 of 1% IS .25%

Yes, you are correct. When I re-read that message above (in my
copy of Agent) I saw my mistake. We are arguing the same value, but
the point is that he is saying its more than .25% (or 1/4 of 1%, as I
wrote it) and I am saying that that is the actual number. My points
are all still valid, as nobody *has* to go to that section of my site.

Again, my mistake on not seeing that he was using the same figure
(just written in a different way).

This is the kind of thing that really disgusts me. You, someone I
don't even know, make a bunch of accusations about me, spread
a few lies around and just generally attack me for no reason and
then, if I choose to reply, you not only blame the whole thing on
me, but you make a whole new batch of accusations.

Where you do get this stuff from? You said that I engage in
"pulling the wings off flies and bitch-slapping retirees". And your
reason for saying this is...?

Then you said that I was replying to "mild complaints and
amateurish flames". They might seem like that to you, but
I think I've taken more than my fair share of totally unjustified
abuse at the hands of some of those on Usenet. I will not
take any more. I let this crap go for two years now, and the
fun is over because from now on, if I see it or hear about it,
I will reply. Its a huge waste of my time, but I'm not going to
sit back and take it anymore.

And as for your accusation that *I* am pissing people off,
wrong. I'm the one who is now pissed off, and I'm the only

one with a right to be. Its me who is being lied about, its me who is being attacked and its my business that people are (based on the above false information) calling for a boycott against.

If this stuff bothers you so much, and its such a huge waste of bandwidth, then why don't YOU tell them when they start it! If you did that, then I wouldn't have anything to post replies to! But no, you are too busy posting your own little attacks (funny how those are'nt a waste of bandwidth, you hypocrite).

I have nothing against anyone on any of the newsgroups that I've ever posted to (since early 1994), UNTIL they begin posting lies about me and attacking me/VGA. If you don't do those things then I'm my normal honest, polite self. If you do decide to engage in such activity, I'm the meanest SOB you'll ever want to meet and I will defend myself to the end. The choice is yours.

And one more time, for the record, those are announcements of FREE, useful information. I only post it once a week. If you don't like it, skip over it. Even a guy like you can exercise the little bit of self control required to do that.

You should have stayed out of it, since your claims are the
ones that are outrageous.

For the record, for the systems that I don't own, or don't have a large number of items for, I went to retail sites and downloaded their sale lists, merged them, removed the duplicates and then added any information I could find to fill in as many gaps as possible.

And as far as the CD32 goes, I had more information saying simply Amiga than I did mentioning Commodore, hence the question marks. They may have sold well where you are, but in this country they did not, and I have never even seen one, and have only just recently been offered games for one for the first time. I did that list in an effort to be as complete as possible.

Instead of stirring up trouble here on Usenet, you could have sent me information to make that CD32 file better! And I'm glad to hear that a better CD32 lists exists, especially since I couldn't find much data to put in mine.

I just took a quick break and loaded my browser. I went to Yahoo and searched for "C64" + "Martin Pugh". I have never seen this man's page or list before, and to the best of my recollection I have never even heard of him before. This is Dean Dierschow's list:

http://www.xocolatl.com/carts/c64.html

That list, which I credited, along with my collection and some other limited information formed the basis for my C64/C128 list.

Just as I told Andrew, any similarity is due to the fact that we did lists for the same system. This argument that because two such lists share similar data that one of them must have been done directly from the other is ridiculous.

No, you are the liar, and thats the truth.

I do have a "hell of a collection", and if you had bothered to even read that list (and all the other computer lists) you would have seen that I did CARTRIDGE ONLY. How you can sit there and feel that you can accuse me of stealing information (disk and cassette tape data) that is clearly NOT even in my list is beyond me.

Your petty attempts to lie about me and further attack me will probably impress a few people (hey, I'm honest). But, those who know the truth when they hear it will not believe you, nor should they.

I hearby advise all honest people to avoid dealing with this miserable little creep (I know I won't be). You *are* a liar. I credited the lists that I used (Mr. Dierschow's). Again, beyond that, the fact that two such lists for the same system contain similar data is only a reflection of the FACT that they are both for said system.

You should have thought about this *before* you posted. It would have been the decent thing to do.

As always, gutless wonder known as XK, I justify my actions
with the truth!

I have never, ever, not even once in my life done drugs. Of course,
a few times, back in the day, I sat behind some pot-head in class
(much like yourself), but thats the extent of it. I don't even drink
coffee.

Its great to see that in the "Land of the free, and the home of the
brave" people can spend their $20 and get an Internet account
and go on-line and make such false accusations though. Makes
you proud of the fact that your relatives have served in the U.S.
armed forces to protect the rights of such people as this piece
of trash! (who by the way was too gutless to post under a real name)

I really shouldn't do this, but...

You can stop trying to pick a fight with me, can you? Not to mention
telling the truth. You sure are bad at that.

I look forward to meeting you someday, as someone has neglected
to teach you the importance of both being polite and telling the
truth. I'll be happy to pick up where they left off.

You are, surprise, factually incorrect.

1) I wouldn't be "spouting off" if people weren't attacking me
and lying about me. Tell them to stop, and I won't have to
reply.

2) Those manuals are pirated (intellectual property of another
copied verbatim), and as such deserve no credit. Original work,
such as the lists (for the most part) or system FAQs has *always*
been credited.

3) I damn well did say "thank you" on my site, from the beginning of
the manual archive, to those who typed them in.

4) Wrong. After what happened on RGVC I capitalized the "thank you".
It was NOT added at that time. Its just that I found out that a lot

of those guys have bad eyesight, along with there many other problems (like telling the truth, attacking people for no reason, etc.)

5) You got that one thing right. I never claimed to have done the manuals. I claimed only that which I did, which was to re-edit them all and clean them up. Some of them had TONS of blank spaces and even e-mail headers and duplicates of the same manual (can you say "waste of bandwidth").

6) Again, they were thanked, from the beginning, just not in the 'ass kissing, give credit where it isn't due for merely pirating a manual' way that they wanted. You see, I don't give in to blackmail or terrorist threats.

7) It is a matter of courtesy, and that is what I said "THANK YOU" (changed from "thank you"). I'm sorry that you missed that.

Since I first encountered these little attack threads in comp.sys.cbm,
and since other are posting them there (as well as to other groups)
I will continue to post there too. Why you would change that so that
the messages go only to RGVC (since I haven't been involved with
that group in two years) is beyond me.

Nice try though!

Can anyone point me to a copy of mapping the atari either on the web or
as e-text? I haven't programmed 8-bit for years so I really need a good
memory map and a bit of a blurb about what location does what!!!
Thanks!

Many years ago I had to repair my Wico trackball, which failed in the same way. Radio Shack likely will not carry the part, which is called a slotted interrupter, or infrared interrupter. After disassembling it, you should notice a slotted wheel, which rotates within a black slotted doohickey which is the interrupter. Mine consisted of a pair of GE H21A1's, which are available from a number of mail order companies (Jameco, Mouser) for about $1.10 each. I have no idea if Atari's trackball is identical, but it is likely quite similar.

Thats funny. I logged onto comp.sys.cbm looking for something and
this was where I was being attacked... In fact, several of the attack
messages had ONLY comp.sys.cbm in the Newsgroup header. How
would you explain that?

And I don't care about your pathetic opinion. My e-mail is for
business, and I did not ask to receive that !crap!.

You didn't seem to care when the attacks against me were being
posted, just when I decided to defend myself. Funny that.

If the attacks are crossposted, then the replies to those
attacks will be crossposted. Tell the people who started
this to stop, and it goes away.

1) You will not be allowed to launch attacks on me in public and
then "take it to e-mail". You started it in public, and we will
finish it there. As such, this reply is also being posted, Matthew.
And should you decide to reply in e-mail, I assure you that I
will not see it (figure it out).

2) I love these guys who trash you in public, for no reason, and
then try and act all reasonable in e-mail. The reasonable thing
to do would have been to not attack me in public. I had nothing
against you until you did that. And if this "discussion" is wasting
bandwidth, its because of you, and a few others. The thing that
you guys didn't count on was me coming back after two years
to actually reply.

3) I hardly need your permission to post something that I did
not ask to receive in my private e-mail account that I pay for.

4) You posted about me, in what I felt was a negative way.
Questioning my ethics and integrity, and without even knowing
me. You gave me no chance, but yet felt you knew enough to
say why I did things and even to take those things out of context.
A reasonable person would have sent me polite e-mail asking
about something that concerned them. What you did was not
reasonable. And any apology you offer now seems to be, to me,
a little late.

5) The treatment I've received on Usenet since 1994 is all the
reason I need to have all that copyright stuff on-line. As for the

manuals, there was NO sarcasm intended. I originally said "thank you" and when I took crap for it I changed it to "THANK YOU". I do appreciate the work they did, but its not original and they have no right to say what can be done with it. Just like if I copy a CD or VHS tape and give you a copy. Why would I want my name on that? Its, technically, illegal.

6) I prefer my full given name. If you treat me with respect, Matt, then I will do that same. Always have, always will. But, when mistreated, I react in kind. You asked politely, so from now on, as long as you are respectful, I will call you Matt (as you asked).

7) I never said they belonged to me, Matt. They belong to the companies that made them originally. I put them in as close to original form as possible. I removed blank spaces, borders, duplicitive information, e-mail headers, duplicate copies of the same manual, etc. If these guys whose cause you champion cared so much about "dues", then why did so many of them leave the company name out?

Again, my site information at the top was added because, quite frankly, I have a real problem with people setting up unauhorized links to the files on my site. I pay for that storage (110MB) and its not cheap. This isn't a Geocities freebie site, Matt. And the funny thing about that is that I've always said, use the 1958 original screen shots, just ask first and tell me the site URL. Take the manuals, I don't own them (I just re-edited all 857 of them). Yet people still want to do what amounts to 'theft of service'. Why? As such, the beginnind was added so that people knew who was paying for said 110MB site.

As for the lines at the end, they are, as stated, an end of file marker. You don't have to like it, but thats the truth.

8) No, you probably aren't a software pirate. How does it feel to have someone jump to conclusions about you and say something about you that isn't true, Matt. Kinda pisses you off, huh!

9) It was (see above).

10) You would have a point, Matt, if I'd put "typed by Michael J. Novak Jr,", but I did not. In fact, I clearly said I didn't type those manuals. You don't have to "buy" the storage cost reason, but its the truth and since I pay the bills for my site, I make the rules. Anyone linking over from an unauthorized link should know who is covering the cost of the storage for the manual, or screen shot, or system FAQ or whatever else they are viewing. And what I said was to not link to the files, not that you had to download them. I see no reason why I should pay for storage and have someone else link to everything to make HIS site look bigger.

11) You skipped over the name calling part. I guess you went
back and re-read your original post and realized that you did
start it :)

12) You said something like "I never see you post useful
information to RGVC", and I was pointing out that I'd been
there, done that, and been gone before you even got there.
And again, if I was being sarcastic its only because I detected
that from you, and wanted to return the favor :)

13) I copied that block over so that the message was on-topic
(the header refers to the game lists, and it was those that the
initial attacks came from).

14) It sure feels like you are attacking me when you refer to me as
a "wanker", then say that I'm "stupid", and also mischaracterize
what I've done (and all in a very short message).

15) I don't have to "justify yourself as far as the manual archive is
concerned", but I have told you the totally honest truth anyway.

16) This apology I will accept, because I think that after reading
the entire message you honestly mean this one. I will say that
I was simply defending myself, and that anything I said should
be considered in that light. As such, I won't apologize (because
I did nothing wrong). If I had, then I would have apologized
(really). I had nothing against you, and I did not even know you.
I would suggest that you refrain from calling people names and
questioning their motives until you politely check with them first
next time.

Its this kind of thing that drove me from Usenet in the first place.
This may come as a complete shock to you, but I don't enjoy
doing this. I've been very productive in the last two years and
I don't relish the fact that its been necessary for me to return.

What if someone where to do something like this:

http://www.iquest.net/~khorton/parody/index.html

I found this web site scunging on an ancient file partition locked up in the
Dungeon of the Webmasters(tm). It will be appearing here for a little
bit before being removed again and moved to it's permanent home in the
bitbucket.

My spies are everywhere, jt! How dare you blame me when you are
responsible for starting whatever problem we now have. I don't
know you, and I had nothing against you, until you decided to lie
about me and attack me in public, on Usenet. You flamed me, jt,
I just replied to your attacks and lies.

And, if you are too lazy to get your auction updates done, just
admit it. I won't take the blame for that either.

> Oh, I see Paul, its okay for people to lie about me and attack me,
> but I'm not allowed to defend myself.

The problem most people are having is that your responses alone account for almost 50% of the crossposted material (at the moment, of 53 posts in this thread on my local drive, 25 are yours and contain over 114,000 bytes worth of data, including quoting). Nobody else has come close to *half* of that.

On most of the groups crossposted we don't know you and I expect most people just ignored the crossposts, writing them off as "nowt to do with me". But *you* are making a nuisance of yourself.

The person doing the most harm to your reputation on the crossposted groups is *you*

APE is a must-have if you want to get the most out of your Atari 8-bit. I've got it running permanently on an old "slave" luggable PC next to my 1200XL. The APE PC is hooked into my ethernet Basement Area Network, so I can get at files off a server from the Atari if I want. This is especially cool with the APE loader - I can keep all my favorites on my NT machine across the room, set my PC mirror drive as drive 1 and point it at the network share, and boot up from APE directly into an easy-to-use menu to launch programs. Way cool!

I also had Steven do the WARP+ OS on my 1200XL. Besides dramatically speeding up i/o, it also does cool things like allowing one to toggle on an '800 compatible' OS to play some of the old 800-only games, and a keyboard hard reset (hold down SELECT and hit RESET) to save wear 'n tear on the power switch.

Good stuff all - I can't imagine running my Atari8 without it! Check it out at http://www.nacs.net/~classics/apeos/index.html

In Go, it's a traditional warning that you're about to capture a group
of stones. Considered kind of old-fashioned.

Larry, What I got from the site, was that the connection to the pc vga card was so that you don't have to constantly change wires back and forth from your 8bit to your pc. I don't know of any vga cards that have any form of input. I think it says on the site that it will run standalone, just allows you to daisy chain it in from your pc to monitor to keep from having to dedicate a monitor. I don't have one, but am seriously considering it. I would want a switch so that I could flip back and forth from pc to 800 while they were running. That would be neat. Isaac

Darrin,
This comes up once in a while. Currently it is not available in
electronic form. The original author, Ian Chadwick, was here about a
year ago and said he was going to handle it. Since then there has been
no word on progress of the project. Unfortunately for us, this is a very
importand missing document that needs to be made available in this form.
Stay tuned. Maybe Ian is listening.

> To Lapis Philosophorum: I only heard of "Stein der Weisen" and was an
> german-only game...

There is an english version of Lapis Philosophorum, sold by a German
company for the Atari 8-bit. It was translated from german as I
understand, so it may be the same game as "Stein der Weisen".

Lapis Philosophorum is an adventure type game where you have to find the
Lapis Philosophorum, a substance which would convert any metal to gold
and cure any disease. You goal is to find it and take it to the
castle to save the King from his illness.

The game itself has a split screen, with graphics at the top and a few
lines of text at the bottom. Or you could switch graphics off and
have a full screen of text (white characters on a black background, in
a medieval looking font IIRC). I know it was sold here in the UK,
there is even a solution to it in one of the New Atari User issues,
but I can't remember which one (it was back when they used to sell the
A4 sized magazine rather than the smaller A5 which they sell now.)

> Does anyone here know the derivation of the tradename "Atari"?

I do, and I added this to the FAQ for the world to see.

Subject: 1.5) How did Atari get it's name?

Graham Thornton, mailto:dangermouse@prodigy.nospam.net types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are thiers, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong(r).

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design, and if you look at the middle logo [MLOGO2.BMP], you will be able to make out both letters.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Yes, good ol' Mt. Fuji. The urban legend of the logo's origin says that it's two people playing Pong. (Must've been a rumor started by the C-64 users or something...)

I remember doing this with my 800xl with the omnimon(sp?) just drop into
monitor mode and dump the memory location of the cart to disk.

Ah those were the days..

Alley Cat has to be my all-time favorite Atari game. Between the sound
effects, color, speed, music and humour, I couldn't get enough.

I remember a game called Bio Defense that also had speech synthesis.

You can email Brad Koda at Best Electronics for parts also. They have schematics for the trackball (both 8bit version, CX22, and 5200 version, CX53) and he should have all the parts for it. Here are some parts listed in his catalog:

CX22 & CX53 Trackball Optocoupler Sensor Module.....CO20290....$5.00
CX22 Service Manual (30 pages)...FD100660...$20.00

Contact them at bestelec@concentric.net or 408-243-6950 between the hours of 1pm to 5pm PST.

Source record: 60568

Here is also the text from Zap! The rise and fall of Atari, by Scott Cohen. This one adds a little more to the story of naming Atari.

Nolan, Ted Dabney, and Larry Bryan, another engineer from Ampex, agreed to put up $100 each and set up their own computer game business. The three sat around Nolan's house one night, trying to come up with a name for their new company. Larry, thumbing through the dictionary, came up with syzygy, meaning the straight-line configuration of three celestial bodies. Nolan looked at
Ted, who looked at Larry, and Syzygy it was. When it came to anteing, however,
Larry dropped out. Nolan and Ted more than made up for this and kicked in $250 each. Larry Bryan, now just afoot-note in Atari history, is probably still
kicking himself.

Nolan applied for the name Syzygy, but a roofing company in California already had that name. Bushnell and Dabney played around with B.D., Inc. and
D.B., Inc., but those names sounded too much like Black and Decker or Dunn and
Bradstreet. At the time Nolan was playing a lot of the Japanese game go, and it
occurred to him to list his three favorite go expressions--sente, the equivalent of
"checkmate" in chess; atari, which means "check"; and hanne, the word used to
acknowledge an overtaking move. Somebody in the office of the California Secretary of State liked the second name best, and on June 27, 1972, Atari was
officially incorporated.

```
i found an atari 600xl at a thrift store
powers up and i can do some basic
programming
but i want a storage device and other peripherals
what i'm mostly wanting is games
what carts work with this computer
and are interchangable with other
8-bit Atari computers
anybody have any games?
thanks
sean k.(atari 8-bit illiterate)
e-mail me ------theSpectator@webtv.net

2006. TEMPEST'S AUCTION UPDATE #2

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-25 00:00:00 UTC
From: Tempest <reicher6@pilot.msu.edu>
Message-ID: <35E36DA8.C89@pilot.msu.edu>
Source record: 60572
Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

Ok, This update has been a little late in coming (two days late!). This
is due to computer problems, but everything fine now. So here's....

Tempest's Auction!

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label)
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear)
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon
019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) Min $10

Atari 400/800

Minimum bid $1, Minimum increase .50

022 Alien Garden (label wear)
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling)
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) Min $5
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked)
039 Q-bert (no end label)
040 Sky Writer
041 Thunder Fox (Complete) Min $5

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works!) Min $5

Atari 2600
---

043 Double Dragon (PAL, New in Box) Min $5

043 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

044 Combat (small booklet)
045 Asteroids
046 Missle Command (Multi-language)
047 Bowling (small booklet) .50 Lexus
048 Bowling (small booklet)
049 Basketball
050 Defender
051 Sprint Master (small tear)
052 Moon Patrol (Multi-language)
053 Battle Zone (Multi-language)

Atari 7800
----

054 Midnight Mutants (complete) Min $3

Intellivision
----

055 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
056 Chip Shot Golf (with instructions) $6 Peter Pepper

2008. 2600 Games - Ocean City Defender and Frontline

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-25 00:00:00 UTC
From: Richard Smith <rsmith@planeteer.com>
Message-ID: <6s0170hcc1@nntp2.uunet.ca>
Source record: 60574

I have two games (Frontline and Ocean City Defender) that appear to be rip offs of Combat and Atlantis. Are these pirate games, or are they licensed versions ? Their packaging appears to be very simple, and does not have a manufacturer's name printed on them.

Any information on them would be appreciated.

Thanks,

Richard.

<ai123@FreeNet.Carleton.CA> stated:

> Is this an external dodad or does it still run in a PC slot? I missed the
> original post, is there a URL for it?

Totally external, no PC required. You can hook a PC to it, but that is
purely an option, and is to provide for switching between the PC's
display output and that of the JAM!! device on the same monitor.

Jeff Potter posted the URL in his message, but for any who missed it,
here it is again:

http://www.aimslab.com/Products/JAM!!/jamhome.htm

It's a great software. I use it in a Compaq notebook, and run it from within Windows95. I have all my classic games on a CD, and APE works fine with it.

Try te demo version. If you like, register it, so you have access to more powerful features.

2016. Re: atari 600xl help

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-26 00:00:00 UTC
From: 8bitz@my-dejanews.com
Message-ID: <6s11eu$2ou$1@nnrp1.dejanews.com>
Source record: 60394

The 600xl only has 16k memory. It can use the disk drive but doesn't have
enough memory to do much. Try to find a cassette recorder. But the 410 is
finicky. I'm not sure how the 1010 is though.
98% of the cartridges will work. They are the best reason to have an atari :)
You can find most common carts for it for 3 to 5 bucks. All the activision
games are great. And the atari games like ms. pacman and pole position and
millipede are just classics and everybody should own them :)
Take care
Mark

2023. My fault entirely, I jinxed this newsgroup!

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-26 00:00:00 UTC
From: Alan Sharkis <asharkis@erols.com>
Message-ID: <01bdd133$9859c840$1fc3accf@asharkis.erols.com>
Source record: 60401

Well, I won't take total blame -- I leave that to the guys that started the Novak, etc., mess. I don't even read messages in that thread any more.

But a day before it started, I was trying to interest people in the 8-bit echo of FidoNet in setting up a cross-post with a mailing list like Info-Atari8 or Atari8-l. It would be tough, because the Fido echo is moderated, but I shot off my mouth and said that self-moderated discussion groups like the mailing list _AND_ csa8 are really models of propriety where it comes to following rules without the aid of a moderator. I gave credit to the 8-bit community for the maturity and good manners it takes to do that. I hope I wasn't wrong.

The message is simple: It's not difficult at all to take something to e-mail or some other forum if necessary, and we all know when it's necessary.

I always liked the name Atari, and the fuji logo (not the original) is an absolute classic too. Shame it didn't have the owners to match, most of the time.

>J.

Well, getting the .pro format documented is probably the first step towards
getting it in an emulator.

Doesn't anyone make a PC disk controller that can read Atari Single Density,
and maybe C64 and Apple disks too, for that matter. That'd be worth $50
to me to use with the emulators.

>
> You can't have that I want it and I am going to get it no matter what!

I know what you mean Bob. I've seen people pay 90% of full retail for a used item, and 150% retail for a new item. It boggles my mind. For those of you who want to buy via an auction - set an upper limit of between 50% and 75% of the value of the item and don't go above it. My upper limit is usually 50%, but I will NEVER pay 100% of the value of an item when bought through auction. (If you are going to pay 100%, why not just buy it from a store? :)

2028. Duh... How do I run program from 800 disk drive

It's been 16 years since I had my first computer, and Atari 800. Many years, many systems later, I can't remember anything about it !

I bought an 800 and a disk drive, and a bunch of games were included. When I boot from one of the game disks, it comes up into DOS. I can do a directory and see the game I want to play listed as

CAVERNS0EXE 0073

How do I get out of this DOS screen and run this damn game !!
Thanx
Mike

I have an Atari 800XL, and was wondering which monitors are compatible with it (to avoid tying up the TV). I remember some people used to use the old Commodore models but I have no idea which ones. I would appreciate any help anybody could give me, then I would do the rounds of the local thrift stores to try and pick one up.

Thanks in advance,

Richard.

You can use any of the 170x, 180x and I believe there was also a 190x series of monitors. I use a 1701 and a 1702 on my systems, have had them since '85 and both are still going strong. The 180x series are not as reliable or as long lasting as the 170x series. They look best if you get the real cable and use the monitor output on the 800xl into the rear connections on the Commodore. There are also RCA phono plug sound and video connections on the front and a switch on the back that allows you to hook 2 systems into each monitor and use the switch to select which system you are viewing - I have 13 Atari 8-bits and 4 ST's so this comes in handy. I also have virtually every book manual and software release for the 8-bits, although I am currently in Regina and quite a bit of my reference material is still in storage in Calgary. I have been doing hardware and software support for Atari's since 1980, so if you have any questions I might be able to answer, feel free to ask here or email me from http://www.hatchcom.com/horizon where I intend to start an Atari section when I get the other 3 websites I have to build done.

Take care!

Buugers now i'm earning and in a position to go to one of these things
they move it...

I would have thought Wetherby was easier to reach than Bolton being
right next to the A1 and, being as small as it is, a lot easier to
find you way around.

2035. 850 manuals

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-26 00:00:00 UTC
From: chrisw@srv1.thelanlab.com
Message-ID: <35e38661.8839089@news.alterdial.uu.net>
Source record: 60577

I'm looking for a source (online?) for the 850 interface technical
manuals.

I must be doing something wrong because from my C code, I can open R1,
configure baudrate, and go into concurrent mode, and continue running
fine until a key is pressed at which point I lock up. I wonder if
it's an interrupt issue or a memory conflict of some sort.

I've been muddling along with on the "System Reference Manual" and
"Your Atari Computer", but neither have been much help with this.

thanks,
chris

Again, my apologies for my part in the start of this. Since Mr. Novak
refuses to discuss anything in e-mail, I've moved "my" portion of the
argument into rec.games.video.classic, as it's the only newsgroup I could
think of that's even marginally appropriate. So, unless someone else
decides to cross-post it back, it shouldn't trouble you again.

Fair enough?

: manufacturer's name printed on them.

: Any information on them would be appreciated.

One guess: These were the versions that was licensed to Sears. Sears put
out the VCS (as well as other Atari games) under their own brand label.
I forgot what it was called (something like the Home Arcade Machine, or
something along those lines). Sears also sold Intellivision the same
way, but it was known as the Super Arcade Machine (?). It's been so long.

Or maybe those were knock-offs. There was quite a bit of that going on
back then...

The connection to the VGA card is just to allow switching between the PC's output and that of the JAM!!. It is not required in order for the JAM!! to operate. Not only does your PC have to be, but you do not even have to have a PC.

They cover this in the FAQ on their site, but oddly, the review from "Game Fan" that they have reprinted on their site also implies a PC is required. I e-mailed AIMS Labs' sales department and queried them as to whether it was a good idea to post the review without noting the error. While they confirmed it was indeed in error, they did not really give a satisfactory explanation for not pointing it out in on the same page as the review.

Hi
Anybody know where I can get an action programming language cartridge?
I have this strange urge to write some code for the 800xl :)

I also have a few cartridge circuit boards with working games on them. I noticed most of them are pink circuit boards except centipede which has a normal green board but the two chips are socketed. Is this normal? And does anybody know where I can get some empty cases or anybody have any dead carts they want to trade?

Any info greatly appreciated.

The best is the commodore 17xx or the 18xx. I have had a 1702 for 13 years and it still works great. The 1802 were not made as well but you can probably get them now for 30-40. And get a video cable with seperate luma-chroma video. You can use composite video but it's not as good.

Not really. It's almost impossible to get to by train, and it is a
hard to get to area. From what I know of the new shows location, it is
covered by bus, rail and coach... And is close enough to the M62 to
find.

Source record: 60344

You can get empty carts and unpopulated ROM boards from BEST and other sources. For making your own carts, you'll need some sort of EPROM programmer. Mapping The Atari explains the six byte table needed for carts to boot properly - run, init addresses along with one other which slips the mind.

Good luck

2055. Tempest's Auction Update #4

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-27 00:00:00 UTC
From: Tempest <reicher6@pilot.msu.edu>
Message-ID: <35E5F473.48EA@pilot.msu.edu>
Source record: 60347
Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

Heres the latest update. If I dont get anymore bids soon I my just wrap
this thing up early and try again some other time. To all who have bid
already, please send me your e-mail addresses!

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label)
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear)
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix

018 Space Dungeon
019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) Min $10

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear)
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) Min $5
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked)
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer
041 Thunder Fox (Complete) Min $5

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

044 Atari 800 (Keyboard flaky but works!) Min $5

Atari 2600
---

045 Sorcerers Apprentice (end label a bit grimy) Min $4
046 Double Dragon (PAL, New in Box) Min $5

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids
050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus
052 Bowling (small booklet)
053 Basketball

054 Defender
055 Sprint Master (small tear)
056 Moon Patrol (Multi-language)
057 Battle Zone (Multi-language)

Atari 7800
----

058 Midnight Mutants (complete) Min $3

Intellivision
----

059 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
060 Chip Shot Golf (with instructions) $7 Peter Pepper

2056. ".GZ" Decompression Blues

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-27 00:00:00 UTC
From: Nick Chionilos <CHIONILOS@Megahits.com>
Message-ID: <35E5FD2E.993E25E5@Megahits.com>
Source record: 60348

Can anyone help me decompress files with the .GZ extension?

I downloaded a few programs off of Yogi's site (or a mirror) and the stuff seems to be compressed. I thought WinZipcould handle this file type, but it claims the file is bad. I can't believe that ALL the files I downloaded are bad... maybe I have a version problem?

Can someone send me a de-arcer?

Also, I'm running Windows 95. Can anyone tell me how to get a program that will compare two files and tell me if they are identical? Something like the DOS COMPARE command? I have a billion copies of autoduel, looking for a complete working set of ATRs and I'm afraid to delete any versions. Please help!

-Nick

>think of that's even marginally appropriate. So, unless someone else
>decides to cross-post it back, it shouldn't trouble you again.

Sorry, normally I would've just continued ignoring this thread.

I'm afraid I'd had a BAAAAD day and was pretty narked when I found over three
quarters of the messages in "rec.games.vectrex" were to do with this
argument....

Heck, I know what it's like when you get dragged into one of these arguments,
especially when you do try and keep it in e-mail and the others insist on
cross-posting to newsgroups.

I'll continue keeping out of it, but could everyone involved PLEASE try and
move this to e-mail?

TTFN - Pete.

I believe dos has a "load binary" option. By convention, exe files are
binaries, though on the atari this extension is optional..

After selecting "load binary" simply type d:cavernso.exe

This of course depends on the version of DOS you're using (is it Dos 2?)
but there should always be something that resembles "load file" in every
version of Atari DOS

Also, one of the nice things about using DOS on the Atari, is that you can use wildcards, saving yourself typing out the full names. For example, if you did the load binary option and it asked if you for the filename, all you need to type is C*.* This, of course, providing there aren't any similar filenames, otherwise it'll load the first viable match. But this way, all you need to type in partial names. You could also do this with SpartaDOS, if I remember right. (Been awhile, as my 1050 died three years ago.)

Of course, the easiest way would be to set up the proverbial AUTORUN.SYS boot disk menu program, and load your binaries from there.

Actually, "Atari" means "I can capture a group of pieces on the next
move" and "Sente" refers to being in control of play, that is, you're
not forced to respond immediately to the other player's last move.

Cathryn,
Actually, there is a cable that allows you to connect an Atari floppy
drive to your PC. However, it is designed strictly for use with the PC
Xformer emulator. I haven't seen any this else that uses this cable. The
instructions for this cable as well as a free version of the emulator
are available at www.emulators.com. This may not be the best emulator
available, but it does work (in most cases). The thing I like about it
is that you can load/copy files directly from your Atari floppies onto
the PC with this. Unfortunately, you can't write to those floppies.
It's a nice feature, if you want to load files into the emulator w/o
copying them to disk images. Great for game disks!.

Sixosix,
It's been done with the SCSI Zip and the CSS Blackbox. I don't think
the ICD MI/O will do it. I haven't seen any drivers/access software
available though. You may not need any.
The closest I've come is via moving files to/from my PC with parallel
Zip attached. This could be done with the SIO2PC cable and A.P.E., but I
haven't thied this way yet. I just happen to have my 8-bit system next
to my PC.

: It is the equivelent of chess's 'check' in the Japanese game of Go.

Another translation is "Prepare To Be Attacked", which is also
the title of my band's demo :)

All,
I'm looking for Atari Interface Magazines (some issues) and more
especially the disks that went with them. Does anyone have these that
could be posted to an FTP site or could you e-mail file versions of
these disks. I can use any regular format of file.
If you want something in return I have loads of software and some
hardware to trade.

Don't forget about removing the basic cartridge if the games don't use it. So much easier on the XL with the option key :)

I have recently acquired one each of the above machines.
However i am in uk and these machines are from us.
As far as ican tell the only part of the machine that relies on us voltage
is the power pack itself.
What i want ot do is but a uk transformer and use this as the power for the
machines.
Is this viable does any know.
If not i will have to buy a step down power converter i suppose

I would also be interested in these if you find them - I have almost
every Antic and Analog issues that were published and possible every
disk issue of these.

I do this with my NTSC 130XE. I use the PAL power supply and there's no problem. I guess the monitor you use it on is more important, but you probably know that! Take care

>*half* of that.

Excuse me, the attacks were crossposted. I simply posted my
replys to the same place. Why pick on me? Why didn't you say
something when they started it? Do you also blame mugging or
rape victims as well? I wasn't posting until the attacks and lies
started.

>On most of the groups crossposted we don't know you and I expect most

Again, I would think that *you* should be more upset that some on
Usenet feel that they can say anything about anybody and that if
that person replies they are wrong. It bother me.

>The person doing the most harm to your reputation on the crossposted
>groups is *you*

I doubt it. *I* have been off Usenet again for a few days because I
was swamped with orders. I guess at least some people can tell
the difference between right and wrong. Too bad *you* don't. :)

Well, Kevin, you are proving with each attack that I am right (that
you and a few others feel you have the right to say anything you
want to about me and that I am not allowed to reply) and you are
a real piece of shit. No, I take that back. You give shit a bad
name.

1) you bought yourself a web page (I know you don't care, but its
going up anyway and mine will contain the truth, unlike yours),

2) someday, somewhere, we'll come face to face. I don't think
you will find this so fucking funny at that point you son of a bitch!

You live in Texas, right? Thats interesting, because I happen
to have a brother who lives in Texas. Maybe its time for a
visit... :)

sixosix-
This has come up several times. Please send
me a valid email address, and I'll send a file
with some tips that I put together. I've been
running an internal scsi ZIP for a year with
my Black Box, and it works great. If you have a parallel, I don't believe it
will work, and if you have an IDE ZIP, you will need an IDE interface.
Larry White

The 1902 and 2002 are also quite good... I haven't used a 2002, but I'm
told the picture is the best of the line.

Well, the show is over. By now you've heard all about it. But wouldn't it have been great to see and hear the speakers? Watch the BattleSphere Tournement? Play or even just SEE a working Computer Space Machine? What about Neutron Star, an Atari Pinball Machine? 5200 Tempest? Or how about hearing how Wiztronics is possibly going to release a stand alone lynx box for your tv(no lcd screen) that uses a Jaguar Joypad?

Worry No More! That's right. You can hear, see, and experience it all(minus tactile and olfactory feedback)! For $25 including shipping in the US, you can have it all. Just follow the link below!

And now for a production update. After a tough early week(my ide controller died on my new motherboard), I've logged 3/4 of the footage shot and will be hammering down this weekend to set up the outline of the tape and start editing. We're well into post production folks. Also, for those that need it, I can now get PAL copies of the tape.

-More soon.

Nick Chionilos <CHIONILOS@Megahits.com> writes:

>Can anyone help me decompress files with the .GZ extension?

.gz files are files compressed with the gzip program. This has become
pretty much the standard compression program for Unix systems. There
is also a DOS version. Do an archie search for gzip.exe.

>Also, I'm running Windows 95. Can anyone tell me how to get a program
>that will compare two files and tell me if they are identical? Something
>like the DOS COMPARE command? I have a billion copies of autoduel,
>looking for a complete working set of ATRs and I'm afraid to delete any
>versions. Please help!

You could bring up a DOS window under 95 and see if the command is there.
Under Unix, you would use the cmp command; I don't use Windows.

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask. I am open to reasonable offers on all items, please make all offers in U.S. Funds (buyer pays shipping). I am also be willing to trade for some shrink-wrapped or new cartridges (mainly rarer titles) for Intellivision, ColecoVision or various Atari systems as well as some rare Mattel and Coleco Handhelds.

If you are interested in any of these items, please respond to jim_lazarenko@NOSPAM.powersurfr.com (removing the NOSPAM section first).

Hardware Please make an offer
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 800XL No Power Supply
-Atari 600XL With Power Supply, RF Cable
-Atari 520 ST Missing all accesories
Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers Please make an offer
==========
-Paddles (multiple sets) -for Atari & Commodore units
-2x Suncom Tac Joysticks -for Atari & Commodore units
-2x Wico Joystick (Black handle with grey base) -for Atari & Commodore units
-1x Spectravideo Joystick with suction cup base -for Atari & Commodore units

Cartridges Please make an offer
==========
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
Miner 2049er
Missle Command
Moon Patrol

Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football
Robotron: 2084
Star Raiders
Tennis

Books and Manuals Please make an offer

I've had good luck unzipping ".Z" and ".GZ" files with WinZip, but I
think the support was just recently added, so older versions may not
like it.

Regards,

Tim Clevenger

(wants to compare two files, see if same.)
You said you're running Win95 and want something like DOS
comp to compare. Why not use DOS comp? It'll work in DOS mode
(or probably in Windows mode).
Second. Do a crc on the files in question. 99.999% certain
if the crc are the same, and the file size the same,
the files are the same.
Russ

My Grandfather was German, but I don't think that qualifies the IDE
interface.... <g>

I did a one chip interface that mounts internally in a 1200XL. To be
really clean, you need to use a programmable OS or a PBI based
interface, though.

This stuff was published in Atari Classics a while back. What are you
looking to do? What system are you using?

Bob

Get a life you Geeks. I mean really. It is getting tiresome. Novak
you loser just stop and I am sure they will too. At least someone has
to stop. Why don't you show everyone what a great fella you are and
just end the thread. This is my first and hopefully last response on
this matter. Be adults and if you can not do that then run to your
rooms and pout. Geeesh.

To all others who are just trying to read something INTERESTING I
apologize for creating yet another message to weed through regarding
this matter. I tried to just ignore it however when you have 77 unread
messages sitting in just one group and 90% of them were from this Novak
nerd I had to say something.

Once again I apologize.

Novak I have nothing against you or your page. The only problem I have
is your spam. Like I said this will be my only post so please if you
take this the wrong way leave me out.

Have a nice day! :-)

Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

Heres update #5. No much has changed, but I'm hoping for some major
action soon.....

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon

019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) Min $10

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear)
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) Min $5
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked)
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer
041 Thunder Fox (Complete) Min $5

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works!) Min $5

Atari 2600
---

043 Double Dragon (PAL, New in Box) Min $5

043 Atari 2600 jr. (with power supply and instructions) Min $10

hey gang,

I read a few, posts in various groups about JAM. its a NTSC to VGA converter, that allows composite video signal input. anyway, i bought one to try it out. I think its awesome, finally i can use one monitor for all my computers. it cost about 80 bucks. you can switch between your pc or Atari, or commie , with the touch of a switch, you don't need to have your pc on to use it, just the monitor; seems to switch in all modes. of course C128 80mode is out of the question, but everything else works great. No software is needed, picture is full screen. Works in any O/S and is completely external.I know a lot of people out there were asking for a way to use there old computers on modern monitors. I think this is a friendly and cool solution.

Have fun!,

In one of the World of Atari posts they said that they saw a 5200 version
of Tempest. Since the 5200 is practically identical to our 8-bits, I'm
surprised a version has not been leaked. (Or is there something I
should know about? :-)

Got me. Atari800Win did NOT do this to you. There is an icon associated with the Atari800Win executable, and Win95 does have an icon cache that has been known to get out of whack (there are a couple of freeware utils that will fix that for you), but there is no attempt by Atari800win to mess around with your IE4 settings.

This is the part that really cracks me up. Someone is getting
attacked, and instead of trying to stop the attackers, you tell
the victim they are to blame. Very funny!

He started it, and in public. You might have missed that,
but it did happen.

Do you always sympathize with the attackers?

I'd like for you to say that to my face :)

I didn't start a thing you piece of shit. And I never said the
world was out to get me. I don't post replies to every
message on Usenet, just the ones that lie about and
attack me. That includes your messages, dolt.

As much as you know, you already have seen me 10, 20, 30 times and not even have known it. Because this is Usenet we communicate via type-written words (if you haven't noticed yet). Threats such as these do not amount to much, and makes you look very lame... I will attach the Standard Usenet Bonehead Reply Form to end of this.

>My mistake. Its Indianapolis, Indiana. I was thinking
>of two other jerks. :)

If you are having problems keeping your list of "bad" people in order, maybe you should re-examine your own position. And yes, I *do* live in Indy, but my phone number is not listed, and neither is my address. You will have a fun time just trying to find it. But not to worry, you are lame and love to make "Big Boy" threats to people. I bet I could glean many of these such bodily harm threats from Dejanews if I so desired.

>And if its not me, I'm sure someone will eventually grow
>tired of your crap. The world is a funny place, and things
>have a way of balancing out in the end. But I see you
>already know about that. ;)

Well, please enlighten me as to what "crap" you are talking about. I think you're just pissed 'cuz the parody page looks a bit better than your real page. :-) Other than that page I have not "Attacked(tm)" you in any way.

***

Standard Usenet Bonehead Reply Form

I took exception to your recent _N_ posts to __comp.*, rec.games.*__ (newsgroups)

It was (check all that apply):

_X_ lame.
_X_ stupid.
_X_ much longer than any worthwhile thought of which you may be capable.

Your attention is drawn to the fact that:

___ you posted a "newgroup" message without Leader Kibo's permission.
_X_ you have a lame login name.
___ your machine has a stupid name.
___ you quoted an article/letter in followup and added no new text.
_X_ you quoted an article/letter in followup and only added _few_ lines of text.
___ you asked for replies via email because you "don't read this group".
_X_ you flamed someone who has been around far longer than you.
_X_ you flamed someone who is far more intelligent and witty than you.
___ you posted someone else's email address and then referred to them as your "friend".
___ your lines are 80 columns wide or wider.
_X_ you failed to check the "Followups-To:" line.
_X_ your .sig is longer than four lines.
(Mark only if above checked)
___ And your newsreader truncated it.
_X_ your .sig is ridiculous because (check all that apply):
_X_ you listed _1_ snail mail address(es).
(Mark only if above checked)
___ you listed a nine-digit ZIP code.
_X_ you listed _1_ phone numbers for people to use in prank calls.
___ you included a stupid disclaimer.
(Mark only if above also)
___ your pathetic attempt at being witty in the disclaimer failed
(Mark only if above also)
___ Miserably.
_X_ you included:
(Mark all that apply)
___ a stupid self-quote.
___ a stupid quote from a net.nobody.
_X_ a Rush Limbaugh quote. (e-mail addy close enough)
___ a Dan Quayle joke.

Furthermore:

_X_ You have greatly misunderstood the purpose of _comp.*, rec.games.*_
(newsgroups)
_X_ You have greatly misunderstood the purpose of the net.
_X_ You are a loser.
_X_ You must have spent your entire life in a skinner box to be this
clueless.
___ *plonk*
_X_ This has been pointed out to you before.
_X_ It is recommended that you:
(Mark all that apply)
___ stick to FidoNet and come back when you've grown up.
___ find a volcano and throw yourself in.
___ get a gun and shoot yourself.
_X_ stop reading Usenet news and get a life.
___ stop sending email and get a life.
___ consume excrement.
_X_ consume excrement and thus expire.

2130. For Sale--Atari 800 and stuff

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-29 00:00:00 UTC
From: reflash <reflashg@execpc.com>
Message-ID: <6s96gv$7hk@newsops.execpc.com>
Source record: 60385

I have for sale an 800 system with all the extras.
Have not used in a couple years, but all was working ok.

My main thing here is that I don't want to throw this stuff away, but also can't part with it for free. The sentimental value of this system is very high, but I can't stand the fact that it is going to waste in storage, I will probably never use it again, myself, as I'm deeply commited to my PC,. I would like to start an informal auction with bids starting at $75 + shipping. I will not sell items separately--all must go as a package(about 3 or 4 of them actually). I want all the stuff out of here.

I am compiling a list of everything this weekend, so if you're interested in the list let me know. Below is the general inventory.
Includes 2--810 drives
2--tape recorders
1--numeric keypad
4--16k ram module + whats in the unit
1--10k rom module + the installed one
1-- modem
tons of manuals/books.
software..cartridges, floppy stuff.
Misc. stuff such as tons of joysticks(some don't work, but there's so many, you can get a couple more working) a graphics tablet that was working but the case screws are out ..don't know the status of this.

Amdek color monitor
9 pin dot matrix printer--Star Micronics

2131. Re: Temptest Arcade game ever available for comps

Newsgroup: comp.sys.atari.8bit

I don't know about the original, but ANALOG had a decent rip-off called LiveWire (in #12, I believe). Tom Hudson wrote it. It supported joystick and paddle, and was one of those great hexadecimal loaders that drove so many of us to distraction (remeber debugging those? Hundreds of lines of hex code gibberish, all for a game. Those were the days - a single issue would keep me busy for weeks, as I typed in the games, looked for my mistakes, and then "improved" the games in a variety of ways.

>that is fact.
>
>Sorcerers
>

Thats not fact. Some on RGVC started this, a long time ago, and
have kept it up ever since. Thats fact.

I'll explain it as best I can (with the truth, as always).

I found rec.games.video.classic in early 1994. I was
fascinated to find people still played the older systems.
I still owned my Atari 2600 and games, as well as my
Colecovision and games. I thought I had found a home.

I lurked for awhile (only reading) and finally, after I felt
that I had the mood of the place down, I began posting.
After some time I made mention of the fact that certain
people would attack any newbie who asked a question,
which drove them away. The attacks on me started
shortly after that.

Some said I posted too often, or I quoted wrong, or why
didn't I shut up, etc. At first it was only a few people, but
pretty soon others began buying into the lies that the
few were spreading, and it was soon like a snowball
rolling down a hill. I was even attacked when posting
helpful information. Would you attack someone for
saying that he stores the board game pieces from
Odyssey2 board games in zip lock bags? Someone
did. And there are other examples of the same type
of behavior.

Of course, when the attacks took a shift to being more
personal, I would always reply to them. Bullies don't
like people who stand up to them, especially those
bullies who use computers and feel that they should
be able to say anything they want to you and about
you, and damn you for replying.

Anyway, I put up with that crap for quite some time,
then after continually hearing that if I would "shut up"
the attacks would stop, and having given it some
thought (and observing the behavior of some others,
such as JerryG) I decided to simply stop. Not just
posting, but also reading RGVC.

Over the next two years, I hardly posted there,
and then only announcements and (for awhile)
stuff FS/T. I received e-mail from time to time
telling me that people were still attacking me and
spreading lies. I just ignored it.

During that time, I was even attacked for posting
a warning about someone who had stopped payment
on a check after they *knew* that I had taken it to
the bank. Would you attack someone for that?
Several on RGVC did. That was one of the times
that I broke my silence for a day or so and replied.
And there was one other, but besides those two
times, I was gone for two years.

Then, about a week ago, I discovered by accident
that I was again being attacked (I was on Dejanews)
and after reading a few of them, I decided that based
on what was being said, I could not let it pass. I replied
where I first saw the attacks and lies (comp.sys.cbm)
and then the problem seemed to shift over here, so
I decided to come back. I'd been thinking about it
for awhile, so it wasn't a hard choice to make.

And then I saw your message... :)

To sum up the answer to your question (the short
version): nothing has changed, really. This group
has always been like this.

Source record: 60310

So I found this cassette tape at a thrift store the other day. It says "Atari(R) Educational System" on it and is lesson CX6016, Basic Electricity. I thought this came in with the Atari 400 I found, but other than having the name "Atari" in the title, there's nothing else on this tape that's typical of Atari (no symbol or trademark notice). And here's the interesting part...I put it in my stereo and out of the right speaker comes the voice of some guy yammering on about resistors and such, but out of the left speaker is a computer data stream. Anyone know what this tape would be used with?

I don't know the right name, but T. Karwoth wrote a batch-enhancement for
MyDOS.
I`m not sure, but it s possible, that a copy is on the "130 XE-Ass" disks -
a free assembler for RAM enhanced computers.

Maybe on Umich you can found a copy of it ...

It's for the Atari computers. The series about programming is the same (Introduction to Sound and graphics) While the computer loads the next quizes and infos the voice teaches you some stuff. Haven't used it in ages myself, but it was kinda cool. Dimension X cassette version played music while loading on that track, as I believe did Lone Raider. There was probably more. Oh, Moonbase IO used that track to good effect.

Take Atarian care

2148. 1050 help

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-30 00:00:00 UTC
From: "Stephen M. Stephens" <sstephens@AMERITECH.NET>
Message-ID: <35E95AF9.37ECC68C@AMERITECH.NET>
Source record: 60315

I have 3 1050's hooked up to a 130xe. I also have an 800xl that has
the same problem when used in place of the 130xe. The problem is I
can't get dos 2.5 to recognize either drive 3 or (if I change the
switches) drive 4. It doesn't matter which drives I setup as 1,2 or 3 I
still get the same problem when trying to take a directory
error - 160. (non-existant device) I don't change any of the diasy
chaining
cpu - 1050 - 1050 - 1050 - sx212
yet no matter which drives I set to 1,2,3 I still can't get a directory
for D3: I have NO PROBLEMS getting directories from D1: or D2: and the
SX212 responds without problem so I don't suspect a bad sio cable.

Anybody got any ideas???

There is a PC controller called the "Catweasel" (also available from the
same folks for the Amiga) that should be able to do it.

At least, the hardware should certainly be up to the task, but I do not
know if it includes the software to read/write Atari SD disks.

I believe it is close to 2X the price you mentioned it would be worth,
however. <grin>

Came across this on bit.listserv.coco:

==========
PT IDE802 - Single Chip IDE and Centronics Interface for 8 Bit CPU's
==========

Features:

IDE Interface incorporates all functions necessary to interface a
16 bit IDE drive to an 8 bit CPU, including address buffers.
Mimics Western Digital WD1000/1001/1002HDO Boards.

Centronics type parallel port with bi- or uni-directional data lines.
5 input, 4 output handshake lines.

Speaker or general purpose output.

On-Chip Interrupts for Centronics, ID and 1 general purpose.

Requires no external buffers, and little or no extra glue logic to
interface with most 8-bit CPU's such as 805x, 68xx or Z80.

Fast Operation: Adds only 75nS to IDE drive access time. This chip
has been successfully tested with an ST351 40MB Seagate
drive and a Z8S180 CPU at 20Mhz clock on zero I/O waits
using DMA transfer with an I/O Cycle duration of 200ns and
350 ns repeat cycle time.

==========

The post mentioned the chip was from a company called "PALMTECH"

There is a companion cartridge that goes with that cassette. It
is a educational system cartridge. You plug this cartridge into the
computer and use a 410 or 1010 tape unit with the cassette. The
cartridge will load graphics info from the tape to display on the monitor
while the voice narrator on the tape provides the instruction for
the particular lesson. You can visit B&C Computervisions web page
and see if he has any of these cartridges. His address is:

http://www.myatari.com/

Or, go back to that thrift store and see if you can find the cartridge.

Also, check with Best Electronics if B&C doesn't have it anymore.

If you want to play the real McCoy on a IBM PC, you need to get
MAME (Mulitple Arcade Machine Emulator). This will play nearly all
the classic arcades, including the vector graphic ones. Go to Yahoo.com
and try a search for MAME. If you can find Sean Kelly's web page, you
can find the program there (currently version 0.3). This is the best
arcade
emulator you will find for the PC, even better than commercial ones selling
for $30 (and it's FREE). The best part about this emulator is that it uses
the actual game rom code to play. This will give you all the original play
from
the game. Especially the cheat code that was built into Tempest.

Good luck,

Glenn Bruner

Hooked the Jam!! up today, and I'm blown
away with the excellent picture quality!
I use a 130 XE with the XE video upgrade
from AC. No grain, no smear, no RFI.
Excellent color saturation. Awesome. I
hooked up the composite video, not even
the S-video.

One drawback, the picture is now at least
25% smaller, but with clear, sharp 40 column,
the size reduction is no problem. I never
would have believed it could be this good!

Now, to try the XEP80...

Larry

The parallel port zip drive uses a subset of the SCSI protocol to
communicate, so you would have to implement SCSI on the Atari or your
embedded adapter to get it to work. I believe its already possible
to hook a SCSI zip to a black box.

Hooking the IDE version of the ZIP up would probably be trivial, since
the IDE interface is just a couple of registers you pump commands into
and read the data back out of, with a few control lines in there somewhere.

A uC IDE->SIO translator would be a start, or you could just weld it onto
the PBI if you wanted any kind of speed. Writing the drivers would be
the only interesting part ;)

Thanks to all who replied on the group and through e-mail!
I forgot about running setup on dos 2.5. You'd think that
atari was aware that we could have 4 1050's and would default
to leave them all active.
A default that limits a user is more microsoft's style, not
atari's

Hi everyone,

I have a huge Atari 800XL lot on eBay, complete with disk drives (one an Indus GT!), printers, tape player, modems, the P:R: Connection device for serial and parallel printers and modems, books and manuals, and also several carts and a BUNCH of disk software. There is a picture of everything on the eBay page below:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=27750336

Auction ends Sept. 3. Thanks!

I have the following Atari 2600 games for sale. They all appear to be pirate or re-release versions of legitimate games. For example "Frontline" appears to be a re-release of Atari Combat, and "Ocean City Defender" appears to be a re-release of Atlantis by Imagic.

I have the following games available:

Challenge
Sea Hawk
Laser Volley
Scuba Diver
Dragon Treasure
Survival Run
Spitfire Attack
Frontline
Ocean City Defender

All of the above have been tested as working. If you are interested, please email me with your offer.

Best regards,

Richard.

I not sure all are familiar with Dan Knoff!. He was at one time a Atari programer who dedicated his total being to our needs. He was a logger who do to his profession lost his ability to program/think ect. Was hurt in an logging accident several years ago and last I heard lives with a relative in a camper shell on a pickup in the drive way of the relative.

A logging accident made him incapable of programing anymore. I bought his rights to what he produced. I donate the proceeds to Dan and his needs. To date have not sold many of his items, but oh well a few $$ in his area are truely appreciated.

bob/dan!

I read you have tons of books on the Atari for sale, I'm interested in the
"Atari BASIC Source Book" by Bill Wilkinson ISBN 0-942386-15-9.
If by chance you sell this book then mail me.

I have the feeling I'm going to get flamed somehow, but here it goes.

__PLEASE__ STOP!!! I have been a member of the Atari 8-bit community
for ten years now, and everybody's always been warm and fuzzy...until now. I
am terribly sorry that this has all had to happen. I am by absolutely no
means intending to insult anyone by this message, but all this name calling
seems to be a bit silly. When I come to read the posts in this newsgroup, I
want to see meaningful things about my favorite classic computer, but it's
all being ruined by this flame war. I __BEG__ all of you in the name of good
sense, please stop the flame war. Don't ruin it for the people who _haven't_
insulted someone.

Respectfully Submitted,
Jason Hedrick

OK, so now I'm quoting and answering myself (and no, I don't have money in the bank<G>).

I went to UMICH and found the files that produce that batch language for MyDos. There are two .DCMs and an .ARC with a short blurb in it. Neither of the DCMs would un-Discomm, even after running through FileFix2. They both gave 129 errors, BTW.

I did get to Tom Hunt's Web site and found them there. I downloaded them. They worked. Tom even has .ATRs of this assembler package! Now I have a copy and my correspondent over at Fido will know where to get them. Thanks for the advice again, Matt.

P.S. the 44 disk sidea rea about 4 megabytes of data. My A8 has no way to handle this much, so I'm having to port it over to the ST to compress and then convert to mime for mailing. It will probably be at least 6 messages when done. Unless you can handle 1 meg floppies in ATR-8000 format :).

2175. Tempest Auction update #8?

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-31 00:00:00 UTC
From: Tempest <reicher6@pilot.msu.edu>
Message-ID: <35EB56B6.6061@pilot.msu.edu>
Source record: 60199
Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

Ok here's the latest update, I've lost track of which update this is!
Two new items....2600 Taz (holes on end of main label) and Starmaster.

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon

019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) Min $10

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $2 Mark
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) Min $5
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $2 Mark
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer
041 Thunder Fox (Complete) Min $5

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works!) Min $5

Atari 2600
---

044 Double Dragon (PAL, New in Box) Min $5
045 Starmaster
046 Taz (holes in end of main label)

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids
050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus
052 Bowling (small booklet)
053 Basketball

054 Defender
055 Sprint Master (small tear)
056 Moon Patrol (Multi-language)
057 Battle Zone (Multi-language)

Atari 7800
----

058 Midnight Mutants (complete) Min $3

Intellivision
----

059 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
060 Chip Shot Golf (with instructions) $7 Peter Pepper

You posted this article in comp.sys.atari.8bit and some other
newsgroups, good, but also in comp.sys.atari: this group doesn't exist,
it's bogus, you should warn your newsmaster so he can remove the group
from the server. Relaying bogus groups is not a good thing, as some
persons not knowing it could post there a question and wait for a never
comming reply...

Bye. Bruno.

PS: Is your email address a real one? You seem to change it frequently
and my mails don't seem to reach you...

Aaaaah, but in this case the default preserves precious chunks of
your 64K of RAM be limiting the number of file buffers to only what most
users would need.

DOS 2.5 (and 2.0) only allocate the first two drives. If you want to use D3:
and D4:, you need to run the setup utility that comes with DOS 2.5 and tell
DOS that you want 3 or more drives. This uses more of your memory, so take
it easy.

Bob

My name is John West. A long time ago when Antic was around, I wrote a program that got published in the magazine. I can't even remember the name of the article, but the program was a TSR that converted the IBM carriage returns in files to Atari carriage returns for easier printing to Atari printers. Again, it will have my name (John West) by it, in whatever issue it's in (I'm guessing sometime in '89.)

The reason I post this is 1) I don't have any copies of the magazine and 2) I'd love to buy a copy of the issue in which my program appears from someone

Please, if you can find this issue and want to sell it, or will at least make a copy of the article and send it to me, I'd really appreciate it! I'm even looking for multiple copies of the issue if possible.

Thanks a lot. You can reach me at johnw@intelli.net.

2184. Antic Magazine Issue Desperately Wanted

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-01 00:00:00 UTC
From: johnw@intelli.net
Message-ID: <6sfp3p$7f5$1@nnrp1.dejanews.com>
Source record: 60202

I wrote a program that was printed in Antic Magazine some time ago. I think the issue was published in '89, although it might have been '88. I don't remember the title, but the program was a TSR to convert IBM carriage returns to Atari carriage returns on the fly when the user printed a file. It has my name, John West, as the author so it should be easy to find.

Anyway, the reason I want a copy of it is sentimental. I don't have a copy, and I didn't have any way to try to find a copy before I thought about trying the newsgroup. If you can help me get a copy, or multiple copies if possible, I'd really appreciate it. Thanks a lot!

John West

I recently bought an Axiom AT-846 parallel printer interface for my Epson LX800 dot matrix
printer. The problem that I'm having is that the printer won't do a carrage roll at the end of
a line. The printer works fine on my PC, so I know it's ok. I need to set up the printer
to accept carrage-return only and not wait for line feeds. Any and all help will be greatly
appreciated.

I remember having a canon printer in 86 that didn't have dipswitches. I had to send an escape sequence before doing any printing.
I don't know the exact switch setting but it's cr=cr+lf
The printer needs to see a cr and a linefeed when the atari just sends a line feed.
Mark

If you don't have it, I have Ian's URL in the "Whatever happened
to...." area of my ARD site

http://www.geocities.com/SiliconValley/Peaks/6320/whatever.htm

I've also got a copy of it, so if he gives you permission, perhaps it
might be more efficient if we split the workload.

Message-ID: <6sip4h$h8i@news2.tds.net>
Source record: 60220

Hi, I'm reconfiguring the 'Browse Links' section on my ARD site, and
I'd like to ensure that no Atari users experience any problems with
the new format:

http://www.geocities.com/SiliconValley/Peaks/6320/bl_per.htm

Actually, there is only one entry up, in the TT Specific section (the
old Browse Links will remain available from the ARD until this gets
going) but you should be able to see if you're going to experience any
problems.

In addition, I'd really love to get some more 8-bit links up, so if
you have a site, please consider filling out my "Add a link" form at:

http://www.geocities.com/SiliconValley/Peaks/6320/addlink.htm

Thanks!

I have an LX-800. Nice printer, crisp NLQ print. Just don't let it get exposed to lightning. I lost my first one that way three years ago. This one cost me all of $4 at a garage sale this past May, and works like a champ.

You need to change one of the DIP switches on the back. You'll find them near the cable connector, one set of 8 and another of 4. Epson calls the first set 1-1 to 1-8 and the second 2-1 to 2-4. You need to put switch 2-4 to the ON position, or UP. If you have the manual, check Appendix D.

Ok, Heres the latest update. There have been a few new bids....

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

It's not a speed issue. I've been meaning to ask Steven about this for a while, I've just been busy working on other stuff (state saving or "snapshots", primarily).

Since Steven sells the APE product commercially, there a bunch of questions here only he could answer - would he be willing to share the format with us, being the primary one. I'd completely understand if he said no, since it's possible it would dilute his user base (users get Atari800Win that can read .pro disks, they find .pro disks on the net, they feel no need to order APE from Steven).

But assuming I had a full description of how .pro works, it wouldn't be difficult at all to support it alongside ATR/XFD/DCMs in the emulator. I'd love to do it, so I could have full disk images with intros, and have games in their original form without being all hacked up with crack messages etc.

You could always use the composite mono output on pin 7 of the RGBI port.
<grin>

Somewhere around here I even have the plans for a circuit to provide
composite color output from RGBI. The problem here is that since you
would still be squeezing the bandwidth through the composite pipe first,
resolution would no doubt suffer.

: think you have to reconfigure the DOS. It works with MYDOS I guess. Take
: Atarian care

MyDOS only has file buffers,not disk buffers.So you can have 9 disk drives
without actually having to have 9 disk buffers.You can use the "O" command in
DUP to configure the number of open files.But remember that each buffer is 256
bytes instead of 128.This is probably the reason why Atari released the 1050
(128bps) drive and not the 815 (256bps) drive.The normal value is 3 file
buffers,which is needed to copy files.

(one for the source file,one for the destination file,and one to read the
directory of the source disk/sub-directory)

I read that you can only have 2 drives in DOS 2.0 and 3 for 2.5.The extra was added to make room for a RAM disk.Of course you can increase that limit by descreasing the number of file buffers from the default of 3,but then you can't copy files.The limit is because any more and you'd over-write DUP in memory.

But I remember using 4 disk drives before.

: I went to UMICH and found the files that produce that batch language for
: MyDos. There are two .DCMs and an .ARC with a short blurb in it. Neither
: of the DCMs would un-Discomm, even after running through FileFix2. They
: both gave 129 errors, BTW.

How did you download them?

If you use Gopher,then you can't download DCM files.The Gopher (or Gopher-FTP gateway) doesn't understand that DCM files are not text files.Any extentions not in it's limited list are considered text files.It's like downloading via FTP and forgetting to type "TYPE I".

If you use Lynx,then you need to put "DCM" in to your "mime.types" file.
disk-img/diskcomm dcm dsk dc3
It really doesn't matter what you put,as long as you put something to tell Lynx that it's not a text file.That MIME type simply seem to make sense.Many MIME types I see seem to be arbitrary.And you'll have to edit your lynx.cfg file to tell it to look in the corect place for your mime.types file.The general rule is that if it's FTP or Gopher,use RETURN to download the file.If Lynx just displays the file like it was text,then you can't download it with Lynx until you edit/create the mime.types file.If you can't do that,the alternative is to simply view the file as text,then press shift-g to edit the current URL,and append ";type=i",which will force Lynx into "I" ("Image") mode.Shift-G only works in newer versions of Lynx.

In Netscape,you used to be able to do the same trick with the "mime.types" file but they took that (and "mailcap") support out in Netscape version 4.You'll have to configure Netscape directly if you have V4.(and V3?)

: I did get to Tom Hunt's Web site and found them there. I downloaded them.
: They worked. Tom even has .ATRs of this assembler package! Now I have a
: copy and my correspondent over at Fido will know where to get them. Thanks

Why do you have a "4" with the high/8th bit set in place of a apostrophe?
It comes out as "B4" (one character) on a VT100 terminal set for 8-bit ASCII
codes.It's a "4" on terminals that ignore the eighth bit.

And a option byte that tells the OS whether to boot DOS (or whatever),whether
to auto-run the cartridge,and whether it's a diagnostic cartridge.
(diagnostic cartridges get run before the OS is initialized)
There's also a byte that reads zero when a cartridge is inserted.

: solve it =-)

If that's the one with the machine gizmo and the lightning, this was actually brought up a few weeks ago. That, too, was the planet that had me stuck for so long (over 14 years!). But someone gave me a partial solution, and I was able to figure it out from there.

Here's a couple of tips. You will need both items. When you put the black box in the machine thingy, out comes a stick thing. Take that back the screen where you see two doors (the one on the right is one where you came from after the ship), and drop that at the top of the stairs. Stand on top of it, and push the joystick up. This will give you at least a head start without saying the rest of the solution. If you are familiar enough with the problem solving techniques of the other planets, then should ring a bell.

When you complete all the planets, return to your planet of origin (where the game begins). This is where you pick up your last treasure, and it also requires some problem solving. After that, you fly back to your home world. The conclusion is anti-climactic, alas. Whether or not you crash or land successfully there is a bit moot, since the game ends all the same.

Yes, I see the possible concern now. I would love the code to be added
as I do have a large image collection but also have a large original
collection that I would love to be able to use if my poor old 130XE died
etc etc....Not imaged them as yet in .pro since they still work..

2228. 810 Disk drive repairs

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-03 00:00:00 UTC
From: "C.J. Herr" <cjherr@xnet.com>
Message-ID: <6smohn$7i$1@flood.xnet.com>
Source record: 60246

I have 2 810 disk drives. One is a straight 810, and it never stops spinning at startup. The second is Happy enhanced, and sometimes it will do the same thing, and others it will stop, but the has trouble reading disks (out of alignment, maybe?).

What causes this? It's not like I abuse these drives. Will they go sour if they *aren't* used for a period of weeks? Where can I get them repaired? Any suggestions welcomed.

Thanks,
-CJ

I always got stuck on a particular planet (can't remember which one--the color cyan comes to mind) and couldn't pass it because whenever I touched down, the computer locked up.

Was this game released on cartridge?

Regards,

Tim Clevenger

Funny. I use Netscape, not even 4! I've downloaded lots of stuff from UMICH with it, including DCMs, with no problems. I've also downloaded from other sites with it, including DCMs, again with not problems.

But your message has some very valuable info, and I'm saving it and printing it out. I do have LYNX access through my public library account, but they don't (as yet) allow downloads in any form. They even stated that they'd probably get rid of LYNX, PINE and the whole non-graphical end within a year.

But that was before most of the local members of my user group, who use Atari 8-bits to log on, signed up ...

Dunno. I'm using Microsoft Internet Mail and News. Maybe that's it.

BTW, and admittedly off-topic, since you're a LINUX user, I'd be curious to
know what flavor you use?

Thanks.

Alan

2232. Welcome to comp.sys.atari.8bit!

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

2234. FS: Atari 8-bit items

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-03 00:00:00 UTC
From: Jason Whorton <jason@microxl.com>
Message-ID: <6snklr$8t8$1@supernews.com>
Source record: 60252

Hello. I have a few Atari 8-bit items that are for sale. All prices do not include shipping. All sales are in the USA only and are by money order only. Shipping is by US Postal Service, 1st Class or 3rd Class, your choice. If you have any questions, please e-mail me.

Atari 410 tape recorder/player $2
It looks good, but the door has one broken latch that makes the door open oddly. I am not sure if it works or not. I hooked it up to my 800XL and tried to get it to work. I don't know if I was not entering the right commands or if it doesn't work right. I am guessing it doesn't.

Atari BASIC cartridge $1.25
Atari Pac-Man cartridge $1.50

Thank you,
Jason Whorton

2238. OFF TOPIC: Anyone having trouble with @Home?

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-04 00:00:00 UTC
From: Tom_Hunt@my-dejanews.com
Message-ID: <6socip$5f0$1@nnrp1.dejanews.com>
Source record: 60256

Note: Slightly off topic. But I do run an Atari 8-bit site so it's somewhat on topic.

While going over the logs for http://CloserToHome.dyn.ml.org/index.html I noticed a consistant problem for someone that uses the @Home cable modem service, The Home Network of Redwood City, CA. I have saved the logs just in case this person would like for me to forward the logs to them so that @Home can diagnose and fix the problem. I've never used their service but from what I understand they use a custom web browser, so I suspect that there might be some bugs in it. Basically, the browser is putting garbage in the the browser's GET command.

If you are the person using this service and having trouble getting to my site, let me know and I'll try and help.

Daniel,
A Plug-in is a helper program for you browser so you can use on-line
files not normally supported by your browser. The one mentioned above is
the Real-Player from Real Audio available at www.realaudio.com.

2241. Video Question? JAM device or 170x, 180x monitors etc.

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-04 00:00:00 UTC
From: Brian Hutchinson <hutch@ena-east.ericsson.se>
Message-ID: <35EFDBAF.DDB353EA@ena-east.ericsson.se>
Source record: 60259

I've seen posts about the new JAM device and about various monitors used with the 8 bits. I'm trying to get enough information so I can decide to just use JAM with a old VGA monitor I already have or if I should so the video mod to my 800XL and use a 170x, 180x, or some other monitor that has separate luma-chroma inputs.

Is separate luma-chroma the way to go for best picture? I kind of gather this from some of the other posts.

Is S-Video a format all its own or is it just separate luma-chroma signals? Can I some how pipe the 8 bit signal into the S-Video port of the JAM?

If a monitor is the way to go who sells them now? Are the Commodore monitors better than the Atari monitors?

I'm setting up a room where I can have all of my Atari computers out and hooked up all the time. My Falcon now uses a old SVGA monitor. I don't think I can do ST Low with it. I have 3 8 bits, 600XL, 800XL, and now a 130XE. I also have a Jaguar in the room. I'd like to have one or two monitors that will work well with all of the machines. I'm planning on adding a 1040STE in the future as well.

Any advice or direction from anyone who has faced a similar situation would be greatly appreciated.

Thanks,

Brian

Lynchburg, VA

2242. tcp/ip packages for ATARI XL?

Newsgroup: comp.sys.atari.8bit

It does contain the original (for Jag) I have one... and if you scrounge
around, you could probably find it cheaper than the Saturn (also, if you
use MAME, you can use Tempest Tubes, new, different layouts from the
original) Also, you might have to dig in the bargain bins... but i know
that T2K was also available for the pc... (i have a demo around
somewhere, and it's almost certainly available for download somewhere)

You pondered about clogging up the group with a FS but decided flogging an
ATARI BASIC cartridge was such a major event, you just had to do it- twice!

For use
>with console keyboard.

Doesn't it require a computer then? I'm impressed ;-)

>Minimum bid is just one dollar and there is no
>reserve!

One dollar?! Was it really worth all the time and hassle involved in
announcing this to the world? Perhaps you hope some gullible person will bid
you 30 dollars to relive their programming glory days?

> For more details and a picture, see

A picture... what use is a picture of a cartridge?!
(Then again, he/she didn't say that's what it was... it could be a porno
;-)). Is it boxed? Rev A, B or C? Condition?
Sigh

I'm looking for an old Sierra game called Grog's Revenge. It was a sequel to BC:Quest For Tires. Has anybody ever seen a copy of this game? Sierra had it in a catalog, but soon dropped the Atari line from their list and refused to answer my questions. Yeah, I've been looking for YEARS for that damned game. John Hart, creator of the BC comic strip, is a local fellow, and I've always been a Grog fan, so I'd like a copy of the game for sentimental reasons.

Thanks for the reply. Here's an example of my http server log entry that is normal:

24.3.63.51 - - [04/Sep/1998:00:02:04 +0500] "GET /index.html" 200 26230

Here's an abnormal log entry:

24.3.63.51 - - [04/Sep/1998:00:03:24 +0500] "GET /sorry%2C%20you%20cannot%20remove%20the%20frames%20with%20this%20page%20in%20view%20because%20it%20resides%20on%20a%20different%20web%20server./nclick%20home%20or%20go%20back%20first." 404 242

The text in the above log entry is actually the javascript that is in the index.html page. The web browser "echoed" it back with it's GET request. This page has a non-javascript section and a non-frames section, plus I've tested it out with lynx, so I don't think that's it's because of an error on the page.

-with UltraSpeed roms?
-with XEP-80
-with any particular terminal program

Video Upgrades
-Adding chroma video signal to 600XL/800XL/1200XL

What is APE?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE 800XE XE Game System

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor. The Atari 800 was code-named "Colleen"; the 400, "Candy."

The following are most of the team who originally designed the 400/800.
Credit for providing this information for the FAQ goes to:
Doug Neubauer (by way of James Finnegan, mailto:finneganj@delphi.com)
Jerry Jessop, mailto:jjessop@ix3.ix.netcom.com
Scott Emmons, mailto:scotte@center.uscs.com

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"
Lawrence D. Emmons - Also one of the creators - Partner in "Cyan Engineering"
Joe Decuir - ANTIC and system and creator
???A French guy - ANTIC logic designer
George McLeod - CTIA and GTIA logic design

Doug Neubauer - POKEY logic design
Mark Shieu - POKEY chip design
Steve Stone - POKEY layout design
Steve Smith - Technician for ANTIC and GTIA
Delwin Pearson - Technician for POKEY

OS PROGRAMMERS:
Larry Kaplan
David Crane
Bob Whitehead
Al Miller

1979
The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop, mailto:jjessop1@home.com writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirment had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were 400's to Sears followed very shortly by 800's."

These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 128 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 8 graphics modes and 6 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The 800 can be fitted with 1-3 of the following two RAM modules:
CX852 8K RAM module, CX853 16K RAM module
and must be fitted with a ROM module:
CX801 10K ROM, CX801-P 10K ROM for PAL machines

1981
November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop, mailto:jjessop1@home.com adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The

GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Buss Interface (PBI), providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the 1064 Atari Memory Module.

1984
Warner Communications sells Consumer Electronics and Home Computer divisions of Atari Inc. to Tramiel Technologies on Monday, July 2.

Atari Corporation is formed by Tramiel Technologies and its products marketed under the Atari brand.

(
Atari Games Corporation is also formed from the former coin-op division and markets coin-op games under the Atari Games brand.

Today Atari Games is an indirect, wholly-owned subsidiary of the Midway Games division of WMS Industries.

Atari Games Corp.: http://www.atarigames.com/
Midway Games, Inc.: http://www.midway.com/
WMS Industries, Inc.: http://www.wms.com/
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus the FREDDY chip, supporting the unique (but rarely used) ability for the 6502C and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface (ECI), continuing the powerful feature of direct memory access. European 65XE's include the ECI port.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

The 800XE, a 130XE with just 64K, was released at some point in eastern Europe. [WHEN???]

1992
Atari officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996
On July 31, 1996, Atari Corp. became a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which is a subsidiary of Hasbro, Inc., for $5 million in cash.

Hasbro Interactive, Inc. is a leading all-family interactive games publisher, formed in 1995 to bring to life on the computer the deep library of toy and board games of parent company, Hasbro, Inc. (AMEX:HAS). Hasbro Interactive has expanded its charter to include original and licensed games for the PC, the Sony PlayStation(tm) and for multi-player gaming over the Internet. Headquartered in Beverly, Massachusetts, Hasbro Interactive has offices in the U.K., France, Germany, Japan and Canada.

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his/her computer platform was developed years before the IBM PC or Apple Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a popular alternative in today's home computer marketplace.

Subject: 1.3) What are the some of the performance features of the 8-bit Atari?

Some of this text by mailto:nbs@sonic.net (Bill Kendrick).

CLOCK SPEED:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

SCREEN REFRESH RATE:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

ANTIC AND THE DISPLAY LIST:

ANTIC Mode #	CIO/BASIC Graphics #	Display Type	Resolution (full screen)	Number of Colors
2	0	Char	40 x 24	1 *
3	-	Char	40 x 19	1 *
4	12 ++	Char	40 x 24	5
5	13 ++	Char	40 x 12	5
6	1	Char	20 x 24	5
7	2	Char	20 x 12	5
8	3	Map	40 x 24	4
9	4	Map	80 x 48	2
A	5	Map	80 x 48	4
B	6	Map	160 x 96	2

D	7	Map	160 x 96	4
E	15 ++	Map	160 x 192	4
F	8	Map	320 x 192	1 *
F	9 +	Map	80 x 192	1 **
F	10 +	Map	80 x 192	9
F	11 +	Map	80 x 192	16 ***

* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16
luminances x 16 hues = 256 colors. (Four registers are for player-missile
graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video
incarnation, are totally redefinable.

PLAYER-MISSLE GRAPHICS:
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:

All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was (fortunately!) rerouted through the normal audio output, and the keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following four paragraphs were written by Chris Crawford and appear in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. The text been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

CTIA ("Color Television Interface Adapter") / GTIA ("George's Television Interface Adapter") is a television interface chip. ANTIC directly controls

most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

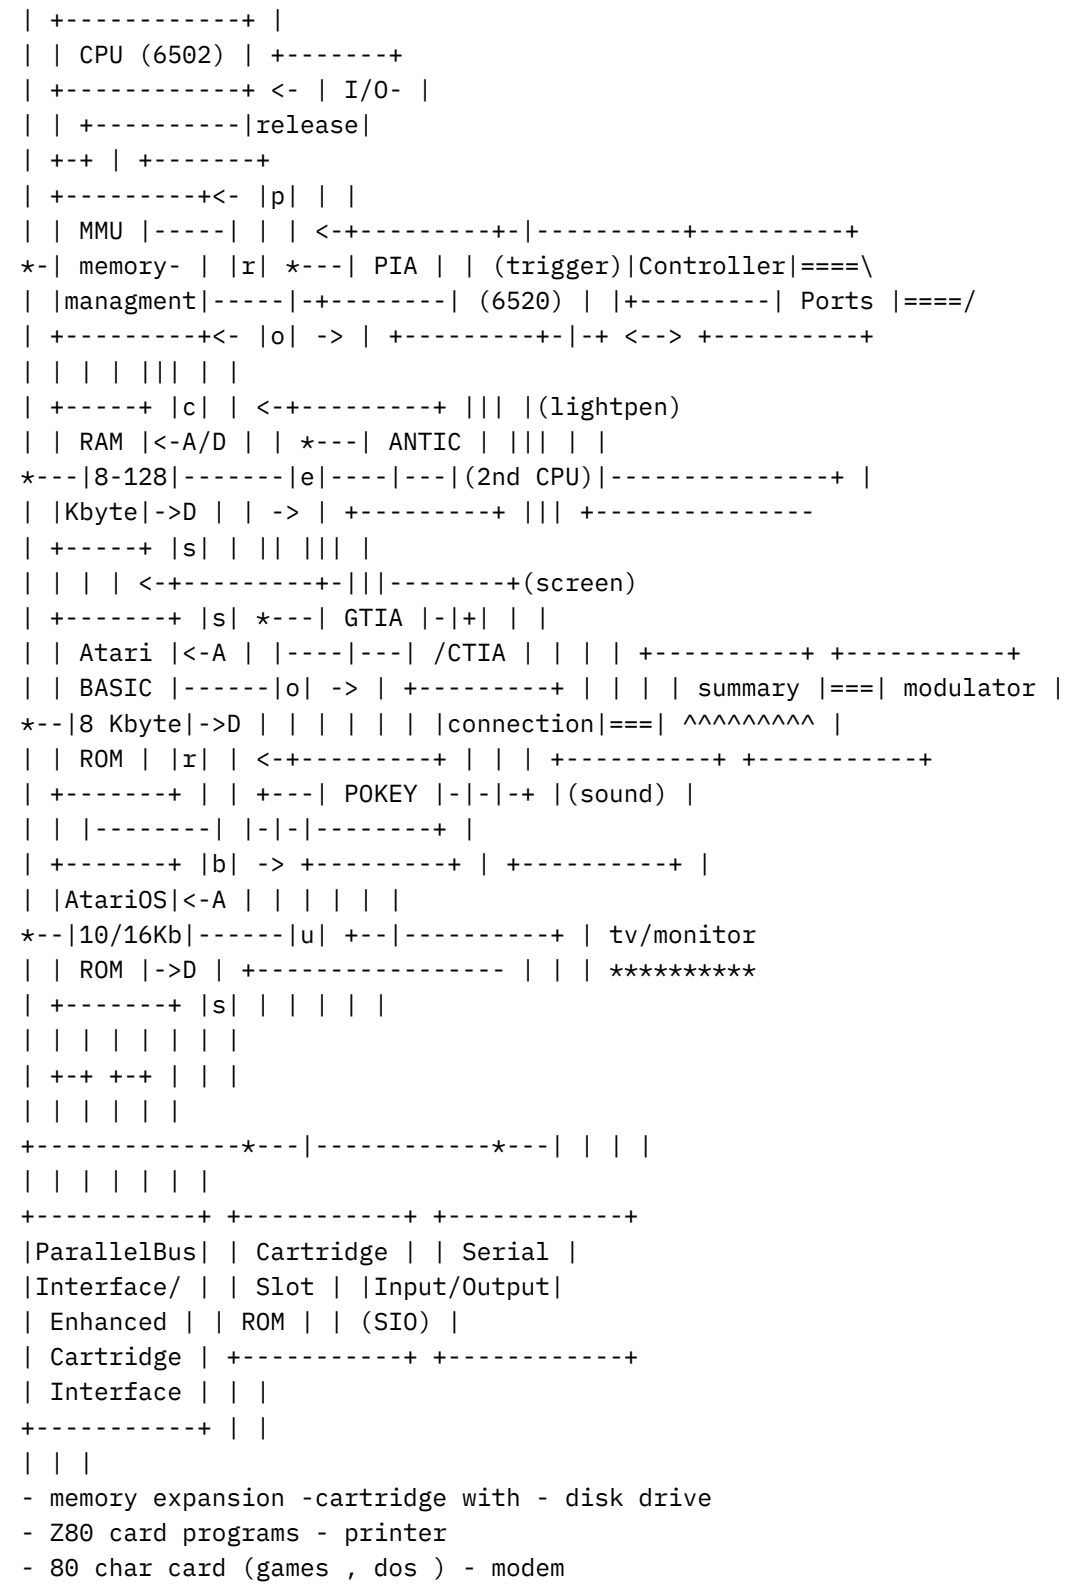
While the 400/800 models contain a generic 6502 CPU, all of the XL/XE models contain Atari's customized 6502C chip. Manuel I. Gloria, Jr., mailto:mani@pworld.net.ph writes:

The difference goes something like this: On the Atari, there are two microprocessors, ANTIC and the 6502 or 6502c. To allow them to coexist, ANTIC must shut off the 6502/6502c, a process called DMA. The 6502 supports DMA, but in Atari's implementation, it required 4 chips. The 6502c has this additional circuitry built-in.

The 130XE and XEGS contain a small additional LSI called FREDDY, a RAM address multiplexer. According to mailto:sup8pdct@mail.cth.com.au (James Bradford), "FREDDY is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDY also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDY but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDY, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDY for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDY does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDY) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.handshake.de (Thomas Havemeister))

->
+--------------------------------------+



- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800: 8K, 16K or 48K standard
600XL:16K standard
1200XL/800XL/65XE/800XE/XEGS: 64K standard

130XE:128K standard
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Subject: 1.5) How did Atari get it's name?

Graham Thornton, mailto:dangermouse@prodigy.nospam.net types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are thiers, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong(r).

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends'

solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design, and if you look at the middle logo [MLOGO2.BMP], you will be able to make out both letters.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion about the Atari 8-bit family of computers, including the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE and the XE Game System!

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

Large binary posts do not belong in unmoderated discussion groups like comp.sys.atari.8bit. If you wish to share PD/freeware/shareware, use alt.binaries.atari and alt.binaries.atari.d or upload the software to the University of Michigan Atari Archive.

To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

Subject: 2.2) What other Usenet newsgroups cover the 8-bit Atari?

news:comp.sys.atari.advocacy
Attacking and defending Atari computers. Unmoderated.

news:comp.sys.atari.announce
Atari related hard/software announcements. (Moderated). Dead newsgroup?
Moderated by Yat Siu, mailto:lexicor@world.std.com

news:comp.sys.atari.programmer
Programming on the Atari computer. Unmoderated.

news:rec.games.video.classic
Orphan home video game systems. Unmoderated.

news:comp.emulators.misc
Emulating one kind of computer on another. Unmoderated.

news:comp.emulators.announce
Announcements related to computer emulators.
Moderated by Qualcomm, mailto:emulators-request@qualcomm.com

news:alt.binaries.atari
uuencoded software for Atari computers. Unmoderated.

news:alt.binaries.atari.d
Descriptions/discussions on software posted on alt.binaries.atari. Unmoderated.

news:alt.binaries.comp.atari8bit
uuencoded software just for the 8-bit Atari. Not widely available.

Subject: 3.1) What is INFO-ATARI8?

INFO-ATARI8 is an e-mail list for discussion about the Atari 8-bit family of computers.

To subscribe to INFO-ATARI8, send a message to:
mailto:listserv@vm.marist.edu
that says:
subscribe info-atari8

Owner= HARRY@MARIST (A Harry Williams)

comp.sys.atari.8bit postings no longer appear in INFO-ATARI8.

INFO-ATARI8 was created on December 9, 1986.

Subject: 3.3) What is ATARIPL?

From: Wojciech Hartman <harti@waw.pdi.net>
Date: Saturday, March 15, 1997 3:51 AM

I am proud to announce that there is a mailing list "ataripl" for all
polish-speaking Atari users and enthusiasts.

To subscribe the lists you have to send an email to
mailto:majordomo@piwo.bl.pg.gda.pl containing a line "subscribe ataripl".

Subject: 3.4) What is ATARI8-L?

atari8-l mailing list

created especially for discussion about ANIX project (unix for atari8),
but any atari 8bit related threads are welcome. english language only.

to subscribe, please mail a message to
mailto:majordomo@zwieracz.pse.pl

containing a line:

subscribe atari8-l <mailing address you'd like to receive the list to>

in the body (not the subject) of your message

there is also mail2news gateway that translates all postings on the
list to easy to read usenet articles, available read-only to everyone at:
news://zwieracz.pse.pl/listserv.atari8-l

if you get any problems, please report to
maciej grzeszczuk, mailto:krap@zwieracz.pse.pl

Subject: 3.5) What is ATARI8PL-L?

any atari 8bit related threads are welcome. Polish language only.

to subscribe, please mail a message to
mailto:majordomo@zwieracz.pse.pl

containing a line:

subscribe atari8pl-l <mailing address you'd like to receive the list to>

in the body (not the subject) of your message

if you get any problems, please report to
maciej grzeszczuk, mailto:krap@zwieracz.pse.pl

Subject: 4.0) What is XL Search?

XL Search is a new and growing search engine created and maintained by
mailto:nbs@sonic.net (Bill Kendrick), designed to provide much-
improved access to the various PD/freeware/shareware Atari 8-bit software
archives available on the Internet.

XL Search is located at: http://www.sonic.net/~nbs/xlsearch/

You can also access XL Search via e-mail! Send mail to:
mailto:nbs@sonic.net with the subject "xlsearch" for details.

mailto:nbs@sonic.net (Bill Kendrick) himself writes:

http://shareware.com/ , c|net's FTP-site search engine, now includes
the Atari 8-bit files at UMich!

Unfortunately, being under the previously-existing "Atari" category,
the files are now pretty mixed in with the ST stuff. I've talked to them
about fixing that. No reponse yet (they're really slow that way)...

Anyway, so now you can use http://shareware.com/ to find Atari stuff..
just be careful what directory you pull it out of! :)

Remember, you can ALSO use MY MINI VERSION OF SHAREWARE.COM!....

XL Search, the Atari 8-bit FTP site search engine!
If anything, it's much less cluttered than Shareware.com! ;)

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Bill Kendrick, mailto:nbs@sonic.net (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

Mirror web sites:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
http://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://pmftp.cs.vu.nl/pub/atari8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file and mail it to mailto:nbs@sonic.net
(Bill Kendrick).

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no (Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

A mirror of Kevin Atkinson;s ClarkNet Archive, kept by Jason Duerstock: ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.7) What is the Atari 8bit FTP Archive in Slovakia?

This FTP site contains demos, games, utilities, zines and other useful stuff from all the world. Also, you can download big amount of slovak and czech programs for 8bit Atari only from this archive. And finally, because this site is created and supported by slovak computer group GMG, most of our products can be found right here.

If you want to place here your program, just send it to me (with some comment) by e-mail and I will do the rest.

If you have some problems or questions, please contact me at this address:

mailto:mchorvat@econ.umb.sk (Marek Augustin Chorvat)

ftp://svs.scsss.sk/pub/atari

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

Internet access to the Cleveland Free-Net (Cleveland, Ohio, USA):

telnet://freenet-in-a.cwru.edu or
telnet://freenet-in-b.cwru.edu or
telnet://freenet-in-c.cwru.edu

Type "go atari" at any menu.

Contact:
mailto:xx004@cleveland.freenet.edu (Atari SIG)

The Cleveland Free-Net now has a home page:
http://cnswww.cns.cwru.edu/net/easy/fn/

Subject: 5.2) What is the National Capital FreeNet Atari Users SIG?

Internet access to the National Capital FreeNet (Ottawa, Ontario, Canada):

telnet://telnet.ncf.carleton.ca (Type "go atari" at any menu) or
gopher://gopher.ncf.carleton.ca or
http://www.ncf.carleton.ca/

Contact:
mailto:ac382@freenet.carleton.ca (Jack Kitowicz) or
mailto:aa728@freenet.carleton.ca (Blair Dea)

Subject: 5.3) What is the Victoria Telecommunity Network Atari Users SIG?

Internet access to the Victoria Telecommunity Network (Victoria, British Columbia, Canada):

telnet://freenet.victoria.bc.ca (Type "go atari" at any menu)

Contact:
mailto:ua558@freenet.victoria.bc.ca (Gordon Hooper) or
mailto:ud264@freenet.victoria.bc.ca (Ted Skrecky)

Subject: 6.1) What is FidoNet?

[NOTE - Michael didn't write this section. If you know who did, I want to give that person proper credit!]

FidoNet is a system not unlike the Internet in that it consists of BBSs linked together. Each discussion group (there are nearly a thousand) may or may not be carried by an individual BBS as the sysop chooses. Discussion groups are called echoes, and each echo must be moderated. There is an Atari National Echo which is 8-bit, and several (I believe) ST echoes. BBSs are also free to have local discussion groups that may or may not be echoed nationally.

To access FidoNet, you need to find a FidoNet BBS that carries the echo or echoes you wish to read, and then abide by the rules of both that BBS and the echo. Some of these BBSs require annual membership fees. Some are supported by voluntary donations. One such that can also be reached by telnet is Doc's Place BBS. I'm not even sure of its location, but I think it's Clearwater, FL. If you're coming in via an ordinary ISP and either Netscape or IE, you simply type:

telnet://docsplace.dyn.ml.org

mailto:krap@zwieracz.pse.pl (maciej grzeszczuk) adds:

all fidonet backbone echoes are carried by zwieracz.pse.pl, and they are available read-only via any newsreader. zwieracz itself (2:480/70, 2:48/70, 2:48/700, 2:2/3009) is the main polish fidonet-internet gateway. i gateway many usenet groups onto fidonet echoamil bidirectionally, so fidonet users here in poland can easily read and post articles. this group is also available at my system via EMSI over TCP or standard modem dial-up connection (emsi over tcp ports are 60177 - for telnet, and 60179 for raw socket).

try url: news://zwieracz.pse.pl/fido.atari and you'll reach national ATARI group.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

Paul Clark offers this tip:

I think Dalnet carries #atari8, do the following;

telnet://telnet.dal.net

At the login prompt, type;

dalnet

If prompted for a password, just hit enter. You should
be able to navigate to #atari8 from there.......

==> #rgvc - Classic Games and Systems Collectors. "Rec.Games.Video.Classic"

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers

fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:76702.1076@compuserve.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 9.5) How can I make my commercial boot disk (tape, cart) into a load
file or disk image?

Russ Gilbert, mailto:russg@en.com writes:

The disk image part is a matter of taking a copyable boot
disk and making an atr, xfd, dcm or other disk image type
file out of it, usually for use with an emulator. Before
emulators, the Bob Puff .dcm format was used to

store/archive/retrieve boot disk images.

Almost all commercial software for the A8 is/was copy protected. For boot disks, this usually involved a large number of special formatting that couldn't be copied using ordinary sector copiers. Usually the boot process involved checking to see if a certain sector error occurred, then proceeding. If the error did not occur, the disk was a copy and would not work.

For carts, usually the method of protection was to write to the cart area of memory and see if the value changed. If the value changed, the cart program was in RAM, not ROM and would fail to operate.

For tapes, again a fair number of schemes were used. Some varied the speed at which the tape loaded. I'm not familiar with tape protection schemes.

With all software media (cart, tape, disk), there may be program encryption, which must be decrypted before the program can run. This to make more difficult disassembly of the program.

There were/are a number of products to defeat copy protection/allow copying of protected software for the A8. The most common way to defeat copy protection was to disassemble the software and revise sections of code so that the copy protection was defeated. A software with defeated copy protection is called a 'cracked' software. The basic procedure is to understand how cart/tape/disk software initializes, loads and runs. Usually make a file out of the software and 'follow the code', starting with loading of the program, to decryption to the actual running of the program. Today, it is unnecessary to copy original commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type

of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product. The APE Pro system, by Steven Tucker, in the registered version of this shareware allows making disk images called 'Pro' images. APE (Atari Peripheral Emulator) requires a cable, called the SIO2PC cable, that connects the A8 13 pin serial port to a serial port on the IBM PC clone. To make 'Pro' images, a special adapter cable is needed, not just the 'standard' SIO2PC cable. The 'Pro' image can 'capture' the copy protection of an original commercial disk. The 'Pro' image can then be loaded into an A8 using the APE registered version software, thus backing up your original disk software. Note the 'Pro' image will only be of use to person(s) owning registered APE software and 'Pro' adapter cable.

Subject: 9.6) How can I convert my commercial boot tape into a cassette image file?

mailto:ernest@pi.net (Ernest R. Schreurs) writes:

For those of you that like ALL classic Atari software, there is now a way to store all software that has been recorded on cassette tapes on the hard disk of your PC. I have written a program that is similar to the SIO2PC utility written by Nick Kennedy. But this one is intended for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free
disk space to work with. The sound card should be able to sample sound
at a sample rate of 44.100 Hz mono. The sample must be recorded into
a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file.
The .cas file is a digital cassette image file that only contains the
data that is on the cassette tape. Once you have that, you can throw
away the .wav file. The .cas files are typically 16 to 64K, so they
are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette
image) you do not need a sound card. You do need a SIO2PC cable or
similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives
of Umich by now. They have been put together in one zip file
wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file
format as of version 1.15 of APE. It looks real neat, so try that out
too! Thanks to Steven for adding a nice user interface for these
cassette images. He did a nice job. I am hoping other using are
willing to write some programs to get more enjoyment out of this
underrated storage medium.

My stuff is available totally free for personal use, so I hope you
enjoy it. Read the docs about the conditions.

Keep those XL's/XE's humming.
If you have any questions feel free to E-mail me: mailto:ernest@pi.net

---

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel, mailto:itayc@hotmail.com
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
http://www.geocities.com/Hollywood/Lot/4205/

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)

Konrad Kokoszkiewicz, mailto:draco@mi.com.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo, mailto:ssilicon@lax.net sums it up this way:
So a basic rule of themb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Apparently 2.07 is buggy.
Anadisk 2.06 is available at: http://ch.twi.tudelft.nl/~sidney/atari/

Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first

portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 11.5), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin
port.)

The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'
side, 12 holes on the 'short' side. The numbers go from
#1 on the right to #13 on the left on the 'long' side
and from #14 to #25 from right to left on the 'short'
side. #25 is closest to being under #13. A male
connector is the mirror image of this.

Most terminal programs allow a null connection, without a
carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about
30 feet long, is to use two female DB25 connectors and

some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.

```
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o o
25 14
```

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed but also pins 4 and 5 as well as 6 and 8. Or better yet, make a true 25 wire, straight through cable and use a commercial null modem. A commercial null modem is just a small device with the correct lines already crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 11.5) What is SIO2PC?

Original text by Dave Paterson, mailto:davepat@total.net

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la
K-Products
US Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives
are faster than any others (except Ramdisks and PBI interface drives).

Several different designs for the SIO2PC hardware are floating around. Best
contact the author for the latest details.

SIO2PC 4.16 is shareware by Nick Kennedy, mailto:nkennedy@cswnet.com

---

SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- UltraSpeed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps

- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- UltraSpeed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 67000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2001 "California Access"
SS SD/ED/DD 19200 bps or 38400 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2002 "California Access"
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.

Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilobytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: MYDOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary; full-compatibel with the SDX)
- UltraSpeed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades (CSS)
- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF351 or XC35
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need to obtain one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Rare.
Fast but still relatively slow I/O, kludge through joystick ports for 800.

==> KPI Hard Disk Drive Interface (formerly Supra)
from K-Products (bobkla19@mail.tcd.net - Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (ftooned@crl.com - Mike Hohman)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Black Box
from Computer Software Services (CSS) (76702.1076@compuserve.com - Bob Puff)
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability
o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

==> MSC IDE-Harddisk-Controller
created by Steve Birmanns and Matthias Belitz in Germany
mailto:stefan_birmanns@ac.cybercity.de
mailto:matz@kawo2.rwth-aachen.de
http://www.kawo2.rwth-aachen.de/~matz/atari/
* real device for the parallel-port of the Atari XL-Series
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at
one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration

* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* access of ATAPI-CDROM with additional software

Subject: 12.4) What kinds of monitors can I use with my Atari?

In general, you either need a Composite Video monitor, or a standard TV.

Television:
You'll need a video cable (not detachable on the 400/800), and a TV Switch Box. Used with VHF Channel 2 or 3.

Monitor:
The 8-bit Atari produces a color Composite Video signal, plus separate chroma (color) and luminance (brightness) signals which the best composite video monitors can take advantage of. Popular examples of such monitors include the family of monitors produced by Commodore.

The pinout of the Monitor port is in the pinout section of this FAQ list.

Gotcha's:

-the 400 and North American 600XL lack a monitor port entirely. They can only be used with a TV.

-the XE Game System provides an RCA-style jack in place of the Monitor port; so it provides Composite Video but lacks separate chroma\luma signals

-the 600XL, 800XL and 1200XL lack separate chroma signal (can be added via hardware modification)

-the XEP80 Interface Module produces a monochrome Composite Video signal via an RCA-style jack. This higher-resolution signal produces crisp, clear 80 column text on 80-column monochrome composite video monitors.

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

"The best monitor for an Atari 8 bit that is readily available today would be a television with an S-video input---these tend to be large and high-quality, so the s-video input is the deciding factor there. You'll have to build the cable yourself, and if you have an XL you'll want to do the Super Video upgrade that Ben Poehland published in Atari Classics a few years ago---this puts the chroma signal back on the pin that it should be and cleans up the video signal enormously. It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are cheap-to-reasonable when you can find them."

mailto:bryede@emi.net (Bryan Edewaard) writes:

"Yes, the best choices are monitors that support "Separated Video" (sometimes called Commodore video on Commodore monitors), or S-Video. These monitors have separate color and luminance video inputs, which

give a sharper picture without cross-color artifacts - such as the colored fringes on text when viewed on a TV (although some games use these artifacts to get additional colors). If you have an XL computer, then it needs an upgrade to support these monitors due to the omission of chroma from the monitor port. the 800 and XE computers don't have this problem.

The 2nd best choice is a TV or monitor that has a "Composite Video" (usually called just "Video" or "Aux") input. This is a signal that has the color and luminance information combined into one signal. The picture will be a little less sharp, but still much better than using the "Channel 3" output.

>Where might I find one?

I've seen them a flea markets, garage sales, swap meets, ham fests, and in newsgroups like this one. Plus, many new TV's support S-Video and Composite video inputs.

>What are the advantages of using one of these rather than a TV?

Well, it's all a matter of how many stages the signal must go through.

1. The Atari generates video as a color signal and a brightness (luminance) signal. These are passed to the monitor port as Chroma and Luma signals (XL's have no Chroma output from the factory).

2. The signals are mixed together to make a standard video signal which is also passed to the monitor port as Composite Video.

3. Then the mixed video signal (along with audio) goes through the process of being "modulated" into a TV radio signal (channel 3 or 4). This step involves removing high frequencies from the video (blurring it) and sending it to the TV in a fragile broadcast form that's suseptable to all kinds of interference. Then the TV must (1) extract the video signal from the radio signal, (2) separate the Chroma and Luma components as best it can, then (3) divide the Chroma in R, G, and B. Any of these steps that you can eliminate will help your picture.

>Are there any other composite video monitors that anyone would recommend
>(and where might I find one)?

Maybe the 8-bit FAQ mentions these monitors. The most common one is probably the Commodore 1702 which has a very good picture and is quite reliable.

If you plan to use an XL (which I do), upgrading the video circuitry makes as big a difference as what monitor you choose. Ben Poehland has some excellent articles in Atari Classics magazines for improving the quality of the XL's video, as well as restoring the missing Chroma output."

Jerry Jessop, mailto:jjessop1@home.com explains why French Ataris produce fewer colors:

"I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in 80-84 sales of these items there were not possible."

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g and 3.2gx are disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS 3.3a and 3.3b were rewritten by Stephen J. Carden for use with BBS Express PRO!. SpartaDOS 3.3c is produced on disk or in a 16K ROM cartridge from K-Products.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2g)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Another popular, powerful DOS is BW-DOS, freeware by Jiri Bernasek.
BW-DOS 1.30 and all other versions are available via:
http://atari.boss.com.pl/files

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Home Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Home Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI (Europe: includes ECI)
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missile Command, detach keybd

XC12 Program Recorder
XM301 Modem -300 baud, w/ XE Term software. Permanent SIO cable
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package.
SIO & DB25 RS232 serial ports.external power supply

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800D (Developers Bus System)
600 600XL, all black case
1000 Sweet 16 Project, lower end model. Became the 1200XL

1000-X Sweet 16 Project, higher end model. Became the 1200XL
1200 1200XL internally, many slight cosmetic differences
1200XLS 1200XL Show prototype, top-mounted cartridge slot
800XLF late 800XL with a redesigned motherboard, plus the FREDDY chip
1250XLD Earlier name for the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL 1400XL plus room for 2 internal 5.25" floppy drives
1450XLD 1400XL plus 5.25" floppy drive
1600XL Amiga/Amiga-like????
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE/AMY sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1060 CP/M Add-On Module -Z-80 CPU, 64K RAM, CP/M 2.2 OS, 80 column display
1090 XL Expansion System-5 PBI slots, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XF351 -a 3.5" drive.
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari
components?

Thanks to Matthias Belitz, mailto:matz@kawo2.rwth-aachen.de for the European
data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this
information conflicts with the units you have.

The most important information is the voltage (in volts) required, and
whether you need a transformer (AC output) or an adapter (DC output). The
power (in watts) and current (in amperes) specifications of the original
equipment as presented here should be regarded as minimum values.
Higher-than-specified power and current capacities are entirely usable,
and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

N O R T H A M E R I C A: INPUT = 115-120 V AC, 50/60Hz

Subject: 13.5) What BBS software can be used on the Atari?

This section mostly by mailto:winston@merk.com (Winston Smith)

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the

great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were added the name was extended to FoReM 26M. Then, When OSS released BASIC XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported features such as intra-line editors. Unfortunately, the coding of the ABBCS was really poor. You could practically blow on your keyboard and crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston, Massachusetts, USA, area. I'm not sure whether his BBS for the Atari 8-bit has been placed into the public domain or not. This BBS was the first to support a RAMdisk, which Paul Swanson called a "V:" device for "virtual disk". This BBS was written in Atari BASIC and required a joystick hardware "dongle" device. This was notable as being one of the first Atari 8-BIT BBSes that could actually go for a week without having to be rebooted. Pointers to the message base were kept in an Atari "very long string" (for which Atari BASIC is famous). The BBS would only have problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of the commercial BASIC XE cartridge to run. This BBS program was very popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It expects to be running under a SpartaDOS environment. This was a problem until very recently, when the disk-based version of SpartaDOS was re-released as shareware. This BBS program uses a "modem clock string" rather than an R-Time 8 cartridge in order to retrieve the current time. It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE cartridge in order to run. It is in the public domain and can import and export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only, control ATASCII graphics are reserved for message data-structure bytes). FOREM-XE BBS is still currently in use as we speak, and may be reached via the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS, which is the Keith Ledbetter companion project of the EXPRESS!-TERM terminal program of days gone by. I am not familiar with this program. I

think that it is written in Action! and only supports XMODEM Checksum transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

o Carina BBS -- a shareware product of Shadow Software.

o BBS Express! Professional -- a product of K-Products. See Vendor List.

o OASIS IV -- a product of ???

o Forem-XE Pro -- by Len Spencer. http://members.aol.com/lenspencer/

Subject: 13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?

Atari BASIC:

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga, mailto:offen300@hio.tem.nhl.nl adds:

there's another good answer (IMO):

You can also take a look at the part numbers on the IC's
inside your Atari and compare them with the numbers from
the following table:

Part# Version
~~~~~~~~~~~~~~~~~~~~~ ~~~~~~~~
CO12402 + CO14502 A
CO60302A B
~~~~~~~~~~~~~~~~~~~~~

CO24947A C

CTIA or GTIA installed?

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the
GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Subject: 13.7) Which versions of the Operating System (OS) are there?

This section written by Freddy Offenga, mailto:offen300@hio.tem.nhl.nl

The following Operating Systems exist for the Atari 8-bit:

Rev. System(s) Models Size Part Nr(s)
~~~~~~ ~~~~~~~~~~~ ~~~~~~~~~ ~~~~~~ ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
A NTSC 400/800 10kB CO12499B, CO14599B, 12399B (*)
A PAL 400/800 10kB CO15199, CO15299, CO12399B
B NTSC 400/800 10kB (?)
B PAL 400/800 10kB (?) (*)
1 A NTSC/PAL 1200XL 16kB CO60616A, CO60617A
1 B NTSC/PAL 1200XL 16kB CO60616B, CO60617B (?) (*)
1 NTSC/PAL 600XL 16kB CO62024
2 NTSC/PAL XL/XE 16kB CO61598B
3 NTSC/PAL XE 16kB C300717
4 NTSC/PAL XEGS 16kB C101687

(?) more information or confirmation required

(*) these versions should exist, although I've not seen them.
If you have one (or more?) of these, please contact me.

NOTE:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

contributors to this section:
mailto:jlodoen@shell.portal.com (Jeff M Lodoen)
mailto:olavese@online.no (Vidar \"Hawk\" Olavesen)
mailto:pmulvey@erols.com (Pat Mulvey)
mailto:sposey@ioa.com (Steven E. Posey) (Party Quiz controllers description)

The following games support 4 player head-to-head play. Remember, only the
400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor,
Thorn EMI Soccer, Major League Hockey

The following support 8 players on the 400/800 or 4 on the other computer
models, using the 2 controllers-per-port CX30 Paddle controllers:
~~~~~~

Super Breakout, Worms?

The following supports 4 players on all machines, using special 4-button keypad controllers linked together with RJ-11 jacks (standard phone jacks) to a box with
2 joystick port connectors.

Party Quiz by Suncom

Subject: 13.9) Why should I disconnect the 810/1050 power supply before connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right, rear of the main board. A 14 pin DIL chip. Actually it is an array of 5 transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be ON on the CPU. The problem has to do with the secondary winding of the Power Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 13.10) What is Omnimon?

--This section was written by Scott Charles, mailto:scharles@blast.net

Omnimon is a add in board for the Atari 400/800 series of computers and a replacement OS chip for the xl/xe series of computers. The original Omnimon board fit onto the OS board in the 800 series and had a switch attached to it to disable the board. The 400 series required you to bend the circuit board into a right angle for it to fit inside the 400's case. (It was designed to do this.). The Xl/Xe version replaces the OS Rom chip inside the computer with one that contains the Omnimon code, and a revised OS to make the XL more compatible (no translator disks needed).

Omnimon itself is a machine language monitor residing from $C000-$CFFF, with a few variations. It was designed in 1981 by David C. Young (who also wrote Cartcopy, a copier for the right slot of the 800) of CDY Consulting in Texas. The first software revision of Omnimon had a few basic commands and was only 4K long, only for the 400/800. The second revision required the addition of a bank select switch, and was 8K long. Since it was addressed by the 400/800 as 4K, when you needed to use the code in the other bank, all the text on the screen flips upside down, you flip the switch and hit any key. The Xl and Xe

versions of Omnimon do their bank selecting through the normal XL port for this function, so it is seamless.

So what can you use Omnimon for? Its main claim to fame is its ability to interupt any running program by pressing and holding the SELECT-OPTION-RESET keys. Depending on the sequence you press determines what kind of warm boot the Atari does. SELECT+RESET does NO warm boot, preserving the stack and flag values of the 6502. OPTION+RESET allows a warm boot (as if you had just pressed RESET) and interupts the vector at $C (initialation vector).

I think you can see where we are going with this - Omnimon was developed as a machine language developer's tool, much in the same way that the Happy modification was developed for legitimate backups. I.E. far more people use both products for software piracy. If you have an Omnimon! in your machine and you try to boot up an Electronic Arts program, for example, you will get a message that says "REMOVE ROM AT $C000", and the program hangs. (Hence,the need for the disable switch on the 400/800 version. There is no way to disable the xl/xe version, just switch it to an alternative OS.) The 400/800 version, since the disable switch just deselects the mapping of Omnimon to $c000 area, can be switched on and off at will.

I myself did not know what Omnimon was used for until I was using a sector editor on a program called Pharaoh's Pyramid, from Master Control Software. On it is a sector that reads, "REMOVE OMNIMON YOU DIRTY PIRATE". This got me to thinking, what does that mean? After about 5 months of playing around with the Omnimon board, I figured out how to use it to pirate software. In fact, it can be used to make most boot disks into binary files, and remove copy protection from countless more.

At the risk of sounding melodramatic, I can safely say that Omnimon hastened the demise of the Atari 8 bit computer by 2-3 years, because of its power.

Subject: 13.11) What is the difference between NTSC and PAL machines?

Software written for NTSC (North America) will always work on PAL machines, but software designed on PAL machines (Europe) won't necessarily work on NTSC machines.

Wayne Booth, mailto:trek@ihgp15.ih.att.com writes:

The differences with PAL and NTSC have to do with the number of lines displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they refresh the screen 50 times a second doing 1/2 the lines each refresh so they effectively repaint the screen 25 times a second. NTSC is 525 lines/screen with a 60 times a second refresh - again only half the lines each refresh so a 30 times a second frame rate. This would change the amount of time available during vertical sync pulse, and the number of lines that need to be redrawn each time.

Graham Thornton, mailto:nero@chicagonet.net adds:

I use both a real PAL Atari 800 and a PAL-ANTIC 1200XL here in the US.

Replacing the ANTIC chip with a PAL version changes the screen refresh rate to 50Hz which allows most of the PAL-only European software to run. Your system will still report itself as a NTSC machine, unless you change the ROM (see the Nir Dary upgrade), but most software doesn't care.

The one problem you might run into is your monitor. Replacing the ANTIC will mean your North-American Atari is now generating an NTSC signal at 50Hz, instead of the usual 60Hz. Some people will tell you that modern TVs and monitors don't care but that isn't actually true. My brand-new Sony Trinitron 15" colour TV/monitor goes bezerk with the upgraded 1200XL, but my 15-year old 10" Texas Instruments color monitor (designed for the TI-99/4A) is fine.

You can also use real European equipment here in North America, provided that you have a PAL-compatible TV/monitor. The frequency of the power system is irrelevant, as I use my 800 with a 110V/60Hz 1050 power supply.

Subject: 13.12) Is the software for the Atari 8-bit computers "TV-standard dependent?"

{some PAL demos flicker, or won't run at all on NTSC machines}

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

This is because PAL machines have a vertical refresh frequency of 50hz (NTSC use 60hz) which translates into more vertical blanking time for demos and other computation-intensive graphics software. So PAL demos that won't work on NTSC machines are usually returning from a VBI (vertical blanking interrupt) too late. Some also attempt to use more vertical resolution ("longer" display lists) than an NTSC display can handle.

mailto:thor@math.tu-berlin.de (Thomas Richter) adds:

Yes, it is. Mostly because the frequency of the vertical blank interrupt is different (60Hz for NTSC, 50Hz for PAL). The old OS A was not clever enough to notice the difference, so all system timings like the keyboard auto-repeat function depend on the TV system. These parts of the OS have been corrected with OSB and the XL versions of the OS. However, as most games install a VBI, their timing does still depend on the frequency -> they will run slightly slower for PAL versions.

Another point is that the popular pseudo-colors used in the Antic-F (Graphics 8) mode are not colorful at all when displayed on a PAL TV, because of differences in the color encoding for the TV. The schematics of the Xl computers include however a hack how to change the PAL version to the NTSC version (the PAL versions include two crystals, one with 5/4th of the frequency of the other. One is used for the system clock, the other for the color clock), but I never dared to apply it.

Subject: 13.13) What programming languages are available for the Atari?

Revision : 1.0
Date.... : 4/20/1997

==========
!!!! This section is under construction - HELP WANTED !!!!

The goal is to give information about all available languages
for the Atari 8-bit computer. This information will include;
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Some resources:
- The Multi-lingual Atari, Analog magazine 45, August 1986
- Assembler Interchange Format, Project description
Version 2.2, 2-2-1997, Freddy Offenga

If you like to help or if you've something to add already,
just contact me. There's still a lot work to be done....
Freddy Offenga, email-to: offen300@hio.tem.nhl.nl
==========
There are quite a lot! To get some structure in this section it's
divided into the following catagories;
a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT
h) LOGO
i) All the rest

[D] = available on disk
[C] = available on cartridge

a) ASSEMBLER
- 130XE+ Makro Assembler v2.2, 1992 (Torsten Karwoth) [D]
Two pass 6502 assembler/editor. Supports extra RAM.
Highly compatible with Atmas II.
- Alfasm, Version 1.0, 1990 (Jeff Williams) [D]
Supports 65816 instructions (for the Turbo-816 upgrade
from DataQue Software). This assember is also known as
the Turbo-Assembler/16.
- Atari Assembler/Editor, 1981 (Atari) [C]
Two pass 6502 assembler/editor.
- Atari Macro Assembler, 1981 (Atari) [D]
Two pass 6502 assembler/editor.
- Atmas II Makroassembler, 1985 (Peter Finzel, Hofacker) [D]
Macro assembler with integrated editor and monitor.
- Bibo Assembler, 1986 (Compy-shop) [D]

- Datasm/65 assembler, Version 2.0, 1981 (DataSoft) [D]
Two-pass 6502 assembler.
- EASMD, Version 1.0, 1981 (OSS) [D]
- MAC/65 Macro Assembler, 1982 (OSS) [D/C]
Two pass macro assembler/editor.
- MAE, 1996 [D]
Supports 6502 and 65816 mnemonics.
- Nasm65 assembler, 1992 (Nat!) [D]
Highly portable cross assembler (written in C). Initially
made for the Atari ST. Highly compatible with MAC/65.
- PC-65 Assembler, Version 1.0 beta, 1996 (Jan Feenstra) [D]
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.
- Synassembler, 1982 (Steve Hales, Synapse Soft) [D]
Two pass 6502 assembler.
- ST-65 Assembler, 1991 (A. Stauffenberg, F.Offenga) [D]
A cross assembler for the Atari ST (written in 68000 asm).
- 6502 Cross-Assembler "xa", 1997 (Andre Fachat) [D]
written in GNU C.

b) BASIC
- Advan BASIC Compiler (Advan Language Designs)
- Atari 800 Basic, Version 1.0, 1981 (Microsoft) [D]
- Atari BASIC, Rev.C, 1983 (Atari) [C]
- Atari Microsoft BASIC II (Atari) [C]
- BASIC A+, Version 3.05, 1981 (OSS) [D]
- BASIC XL (OSS) [C]
- BASIC XE, 1985 (OSS) [C]
- Turbo Basic XL (Frank Ostrowski, Happy Computer) [D]
Interpreter, Version 1.5, 1985
Compiler, Version 1.1, 1985

c) C
- ACE C (John Palevich & Ralph Walden) [D]
This is a newer version of 'Deep Blue C'.
- C/65, Tiny C (OSS)
- C65
- CC65, 1989 (John R. Dunning) [D]
This public domain package includes; compiler, linker,
assembler and object librarian.
- CC8
- Deep Blue C, Version 1.2, 1982 (John Palevich, APX) [D]
Drawn from Ron Cain's public domain C-compiler.
- DVC C, Version 1.01, 1985 (Ralph E. Walden) [D]
- LightSpeed C, Version 1.08, 1986
(Clearstar Softechnology) [D]

d) PASCAL
- Atari Pascal, Version 1.0, 1982 (APX-20102) [D]
- Draper Pascal, Version 1.5, 1983 (Norm Draper) [D]
- Kyan Pascal, 1986 (Kyan Software) [D]

Package includes; compiler, linker and assembler.

e) LISP
- INTER-LISP/65, Version 2.1, 1981 [D]
(Special Software Systems, DataSoft)

f) FORTH
- ValForth (Valpar International)
- Extended fig-Forth (APX-20029)
- fig-Forth, Version 1.1 [D]
- fun-Forth (APX-20146)
- Grafik-FORTH
- QS Forth (Quality Software)

g) PILOT
- Atari PILOT, 1980 (Atari) [C]

h) LOGO
- Atari LOGO, 1983 (LCSI, Atari) [C]

i) All the rest
- Action!, 1983 (OSS) [D/C]
- Quick, Version 2.0, 1990 (Raindorf Soft) [D]

Subject: 13.14) What is the Atari XEP80 Interface Module?

This section written by: mailto:raukamp@dame.de (Thomas Raukamp)

Since the development of the Atari 8-bit line of computers in 1979, users wanted better text displays than the default 40x24. There has been some attempts to satisfy this need, like the Austin-Franklin board or the Ace 80/80xl cartridge. For more informations about these modifications read The Atari 8-bit Hardware Upgrade FAQ from David A. Paterson.

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It lets a XL, XE, 400 or 800 computer system display a full 80 columns across your monitor screen. The XEP80 provides a 256-character wide by 25-line display window. Up to 80 characters are displayed horizontally at once, and you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file, which is the XEP80 handler. If you want to use the module with an application that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.

Subject: 13.15) What makes some XL/XE software incompatible with the 400/800?

Konrad M.Kokoszkiewicz, mailto:draco@mi.com.pl writes:

XL/XE software won't work on 800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Subject: 13.16) What games run only on the 400 and 800 models?

The following are reported as incompatable with models other than the original Atari 400/800. Most probably do work on XL/XE's if you use a translator to run the original 400/800 OS on your XL/XE.

Alley Cat Synapse
Apple Panic Broderbund
Aquatron Sierra On-Line

Subject: 13.17) How do I type a tilde (common character in Web URL's) on my Atari?

The Shadow, mailto:The_Shadow@spnt.com writes:

The question is: "How do I type the tilde or squigly line which is in most web addresses? I don't have a key for it..."

Answer: The tilde is an inverse backspace on the Atari 8-Bit which can be very hard to type depending on the term program you are using, however you can insert the hex equivalent very easily, which is %7e in place of the tilde and it will work just perfectly. Do not put a space either before or after the %7e.

I (Michael) add:

Some advanced Atari software supports the tilde character natively. E.g., you can type a tilde in Ice-T with the Atari Logo/Inverse Video key.

Subject: 13.18) What's the difference between ASCII and ATASCII?

David Moeser -- erasmus att iglou dott com -- produced this nice translation table.

ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)
==

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." Available via:

http://www.faqs.org/faqs/atari-8-bit/vendev/

and Usenet FAQ archives everywhere.

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

Trevor Holyoak, mailto:trevor@holyoak.com maintains the "Atari BBS List."

http://www.holyoak.com/atari/

Subject: 14.3) Where is my nearest 8-bit Atari user group?

Rich Tietjens, mailto:atari@teleport.com maintains an Atari computer user group list at:

http://www.teleport.com/~atari/ugbbs.htm

Subject: 14.4) I'm new to the Atari. How do I use this thing?

"The Atari 8-bit New User, Emulator Help FAQ" is maintained by
mailto:nbs@sonic.net (Bill Kendrick). Bill and his FAQ are
excellent sources for information on basic usage of the 8-bit Atari, and for
information on the 8-bit Atari emulators which run on other computing
platforms.

See: http://www.sonic.net/~nbs/atari/info/emulatorfaq.html

If you'd like a text-only copy, simply send e-mail to
mailto:nbs@sonic.net with the subject:

send emulator faq

Subject: 14.5) Can I use an emulator to run my old Atari software on my new
computer?

"The Atari 8-bit New User, Emulator Help FAQ" is maintained by
mailto:nbs@sonic.net (Bill Kendrick). Bill and his FAQ are
excellent sources for information on basic usage of the 8-bit Atari, and for
information on the 8-bit Atari emulators which run on other computing
platforms.

See: http://www.sonic.net/~nbs/atari/info/emulatorfaq.html

If you'd like a text-only copy, simply send e-mail to
mailto:nbs@sonic.net with the subject:

send emulator faq

Subject: 14.6) What hardware upgrades, modifications and add-ons are available?

The Atari 8-bit Hardware Upgrade, Modification and Add-On FAQ is maintained by
David A. Paterson, mailto:davepat@total.net or see:

http://www.geocities.com/SunsetStrip/Alley/1878/hard_faq.htm

Subject: 14.7) What is the HARD-Interlacing-Picture (HIP) format?

HIP is a new method to displaing pictures on small atari...

HIP stands for HARD-Interlacing-Picture and was found by
Members of HARD Software, Hungary in June, July 1996...

It enables to display 160 x 240 Pixels with 30 shades without
nearly all flickering (depends on the source-picture you use)...
HARD stands not for HARD or HEAVY Interlacing, just for the
inventors...

For more information, see the HIP-FAQ, located at:
http://www.uni-karlsruhe.de/~Marek.Tomczyk/Atari8/hipfaq.html

or contact HeAvEn at mailto:nadkar@fh-pforzheim.de

Subject: 14.8) How do I access Usenet, FTP, Gopher, and WWW by e-mail?

The Accessing the Internet by E-Mail FAQ is maintained by "Doctor Bob" Rankin, mailto:BobRankin@MHV.net or see:

http://www.faqs.org/faqs/internet-services/access-via-email/

2255. Auction: Atari 410 Program Recorder, 800XL, 1050 floppy, Atari programming book

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-05 00:00:00 UTC
From: Barton Oleksy <boleksy@nait.ab.ca>
Message-ID: <35F16DF4.D9F91110@nait.ab.ca>
Source record: 60273
Cross-posted to: comp.sys.atari.8bit,rec.games.video.classic,alt.atari,rec.games.video.marketplace

Looks like new! Check it out at this URL:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=28892817

Also check out my other two auctions ending Sept. 8th (AM):

Atari 800XL System unit only (no cables) - current bid $1:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=28306677

Atari 1050 Floppy drive (also no cables) - current bid $3.25:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=28307063

Graphics and Animation on the Atari (400/800/600XL/800XL/1200XL)
hardcover:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=28856244

2256. WTB-Atari M.U.L.E. disk version

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-05 00:00:00 UTC
From: swanee0523@aol.com
Message-ID: <1998090522202100.SAA14455@ladder01.news.aol.com>
Source record: 60274

Does anyone have the Atari disk version of M.U.L.E. for sale? Original or copy is fine. After 15 years my disk is shot and boots about 1 in 5 times. Soon it will probably not work. Just spent $30 to buy a used 1050 drive because it died last month. Please drop me an email if you have M.U.L.E. for sale.

Thanks
Carl

Your posts for the 410 recorder with shipping included has a problem as you can not sent it via the Post Office book rate for $2.00 because it weighs too much...I have sent a lot of stuff both U.P.S and Postal and can not come up with anything near your rate..?? Please tell me how you are doing it so others can save $$$$ also.

bob

Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

```
Sorry this update is late, I didn't have access to a computer this
weekend!

A few things have changed here. I've traded off a few things...

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200
-----------
Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
```

017 Qix
018 Space Dungeon
019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) TRADED!!!!

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $2 Mark
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) $5 LEXX
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $2 Mark
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer $2.50 JerryG
041 Thunder Fox (Complete) $5 Harvey

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works! no shift key!) Min $5

Atari 2600
---

044 Double Dragon (PAL, New in Box) Min $5
045 Starmaster
046 Taz (holes in end of main label) TRADED!!!!

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids
050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus

052 Bowling (small booklet)
053 Basketball
054 Defender
055 Sprint Master (small tear)
056 Moon Patrol (Multi-language)
057 Battle Zone (Multi-language)

Atari 7800
---

058 Midnight Mutants (complete) Min $3

Intellivision
---

059 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
060 Chip Shot Golf (with instructions) $7 Peter Pepper

2264. Eidolon for atari emulator

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-06 00:00:00 UTC
From: Schulz.Norbert@t-online.de
Message-ID: <6sth0s$49g$1@news01.btx.dtag.de>
Source record: 60089

Does anyone know where I can get a disk image of
the game Eidolon (Lucas Arts). My 800XL recently died
and I still like to play this game sometimes.The copy
protection of the disk made it impossible for me to
get it working on an emulator like Xformer.

Thanks,

Norbert

2265. For Sale: Atari Books - Forth, Basic, Programming Tips

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-06 00:00:00 UTC
From: Richard Smith <rsmith@planeteer.com>
Message-ID: <6t1a04$n2d$1@nntp2.uunet.ca>
Source record: 60090
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari

I have a number of each of the following Atari books for sale:

Atari Basic - Learning by Using - Written by Thomas E. Rowley and published
by Hofacker
Forth on the Atari - Learning by Using - Written by E. Floegel and published
by Hofacker
101 Programming Tips and Tricks - Written by Alan North and published by
ARCsoft Publishers
Inside Atari BASIC - Written by Bill Carris and published by Atari

All of the books are new and unread. Each book is $3 plus shipping.

If anybody is interested, please drop me a line.

Thanks,

Richard Smith.

2266. Looking for...

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-06 00:00:00 UTC
From: rick@mindspring.com
Message-ID: <6ssrnf$4fm$1@nnrp1.dejanews.com>
Source record: 60281

Having owned an Atari 400, 800 and 5200 in my early teen years, I was excited to find the atari emulator for the PC.

I'm looking for sites containing game downloads for this emulator.

Specifically, I'm looking for:

1. Crystal Castles
2. Marble Madness
3. Guantlet
4. Spellunker

Thanks
Rick

2274. JAM!! with S-Video

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-07 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <1998090703553400.XAA10546@ladder03.news.aol.com>
Source record: 60092

Hooked up the JAM!! with S-Video from my 130XE, and there is good news and bad news. The good news is that display is slightly better. It is slightly sharper, with slightly less artifacting. But the emphasis is on "slightly". The bad news is that at least with my hardware, the display is unstable. The picture was perfect for maybe a minute or two, then it would black out. In order
to get the picture back, I had to turn the JAM!! off for a few seconds then back on
or turn off the Atari. Someone with more electronics knowledge than I have will
have to try to duplicate and/or diagnose this, but it suggests to me that the JAM!! is being overdriven by the S-Video from the Atari. (???)

Is alleycat the game where your a black cat and you have to jump
around on a fence, some garbage cans, go into an apartment ect?
If so, its definatley been ported to the PC. I used to play the hell
out of that game back in the 80's on my Tandy 1000 EX.
I bet I still have it on 5 1/4 disk around here somewhere, one of many
great games obtained from good o'le Rusty and Eddies BBS.

2285. Help running .rom on PC emulators

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-07 00:00:00 UTC
From: bigbernie@hotmail.com
Message-ID: <6t0ug4$i25$1@orthanc.reference.com>
Source record: 60103

I've recently discovered several PC atari emulators (atari800win ect).

I'm having some problems running several .BIN files that I've downloaded. According to what I've found, bin files are either cartrige roms and need to be set up as cartriges. Otherwise, they need to be run from an atari dos.

I've found several DOSes but I can't get any of these to run. (and since I never had a DOS...)

I've also read that you can convert these to .ATR files but I haven't found a program to do so...

HELP!!!! Please email me with any suggestions.

That's really great that you found those programs there, but that is for the
Atari ST which is not compatible with the 400/800 etc.

2289. For Sale: Atari Books - Forth, Basic, Programming Tips

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-07 00:00:00 UTC
From: Richard Smith <rsmith@planeteer.com>
Message-ID: <6t1bi0ngg1@nntp2.uunet.ca>
Source record: 60107

I have a number of each of the following Atari books for sale:

Atari Basic - Learning by Using - Written by Thomas E. Rowley and published
by Hofacker
Forth on the Atari - Learning by Using - Written by E. Floegel and published
by Hofacker
101 Programming Tips and Tricks - Written by Alan North and published by
ARCsoft Publishers
Inside Atari BASIC - Written by Bill Carris and published by Atari

All of the books are new and unread. Each book is $3 plus shipping.

If anybody is interested, please drop me a line.

Thanks,

Richard Smith.

I have the WinSTon emulator that takes ST and MSA files.
I found some ATR files that I would like to use.
Can WinSTOn use them or can they be converted?

Rick

I had a dream the other night about my old Atari 400 which I grew up with but hadn't seen for over 10 years. Behold my parents storeroom. Even moving two times they packed the thing around and still had it and all the disks, books, and carts, I ever bought for the thing. All still in the boxes, in mind condition. Totaly amazing. Now all I need to do is find a suitable display for the thing. Has anyone used one of those TV cards for the PC and plugged an old 400 into it to get a display under channel 3? Let me know if this works. I suppose I'd have to but a fitting for the video out cable to screw onto the coax on the card. Has anyone tried this with success?

Thanks
Phil

2296. Re: JAM!! with S-Video

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-07 00:00:00 UTC
From: rwoolley@postoffice.pacbell.net
Message-ID: <35F49CEC.21B6EF5F@postoffice.pacbell.net>
Source record: 60114

I hooked up my JAM and it has a significantly better display than anything I have ever seen before. I am in the process of cutting up the SONY cable supplied with JAM to use on the Atari...

The device appears to set up video levels during the first few seconds of video sync - turn on JAM and then your computer. Mine is rock solid on all modes and models. S-Video on the 130XE is superb.

If you are following directions and are wired properly, it works great. Maybe your unit is defective.

Another thing, is there any possibility that the next time you
modify your CGI scripts that you have them recognize Atari computers?
There are a number of browsers available for the Atari platform, and
they all send the appropriate information, but being such a small
segment of the market, no one has bothered to include recognition.

<l.favard@france2.fr> stated:

> i'm an Atari Falcon user, and i would like to connect an Atari
> touchtablet to a joystick port.

As I recall, the Atari touchtablet used the POT (paddle) inputs on the Atari 8-bit controller ports. As the standard (DB-9) controller ports on the Falcon (as with all of the Atari 680x0 range) lack analog capability, interfacing them there is essentially out of the picture.

The Falcon, however, does provide for analog input on the enhanced (HDB-15) joystick ports on the left side of the machine. Interfacing the tablet there should be a simple matter of building a cable, although you would need to write your own software to read the port.

In article <35EFDBAF.DDB353EA@ena-east.ericsson.se>, Brian Hutchinson
<hutch@ena-east.ericsson.se> stated:

> I've seen posts about the new JAM device and about various monitors used
> with the 8 bits. I'm trying to get enough information so I can decide
> to just use JAM with a old VGA monitor I already have or if I should so
> the video mod to my 800XL and use a 170x, 180x, or some other monitor
> that has separate luma-chroma inputs.

VGA monitors typically have better dot pitch than a 170x or 180x monitor.
Typical dot pitch for VGA monitors is 0.28mm for 14" sizes nowadays,
although older ones were sometimes 0.31mm, and a few cheapos went up to
0.39mm (and I even saw one way back in '90 that was a frightening .51mm,
which is actually about the same as a 170x/180x series monitor).

> Is separate luma-chroma the way to go for best picture? I kind of
> gather this from some of the other posts.

Yes, chroma/luma reduces interference between these signals that occur
when they are carried as a composite signal. One caveat is that some
games depend on this for artifacting, giving colors that would not
otherwise be there. For anything else, especially text, chroma/luma is
much better. For the SupervideoXL 2.1 mod from "Atari Classics" magazine,
check out my web page at:
http://members.delphi.com/lmcclure/svxl/index.html

> Is S-Video a format all its own or is it just separate luma-chroma
> signals? Can I some how pipe the 8 bit signal into the S-Video port of
> the JAM?

Same signal, just a different connector (a 4-pin mini-DIN for S-video vs.
two RCA plugs or jacks for chroma/luma). Perhaps the most simple way to
build the appropriate adapter is the buy an S-video cable, cut it in half
(so you can save the other half for a future project, or in case you
really mung things), and wire that directly to a 5-pin DIN to plug into
your Atari's monitor port, or if you already have a chroma/luma/audio
cable, to a couple of inline RCA jacks. The S-video pinouts can be found
on the menu at:
http://lwp.ualg.pt/docs/hwb/menu_Connector.html

I believe you will find the Atari 8-bit monitor port pinout there as
well.

> If a monitor is the way to go who sells them now? Are the Commodore
> monitors better than the Atari monitors?

Atari never made any monitors that work with the Atari 8-bits. The SC1224 and SC1435 were analog RGB only, the SM124 was strictly for the ST (and the Falcon, with a proper adapter), and the other monitors were either for the TT or for PC's (CGA, EGA, or VGA). AFAIK, you will not find a single monitor with an Atari badge on it that supports color composite or chroma/luma. There was an XC-series monitor planned for the 8-bits, but I do not believe they got as far as the engineering prototype/sample stage.

> I'm setting up a room where I can have all of my Atari computers out and
> hooked up all the time. My Falcon now uses a old SVGA monitor. I don't
> think I can do ST Low with it.

Actually, you can do all ST resolutions, using line-doubling (I.e., 320x200, but scanned as 320x400), but programs that hit the hardware directly can cause problems by setting the output back to "true" ST resolutions and scan rates.

> I have 3 8 bits, 600XL, 800XL, and now a 130XE. I also have a
> Jaguar in the room. I'd like to have one or two monitors that
> will work well with all of the machines. I'm planning on
> adding a 1040STE in the future as well.

The best single monitor solution would be a 15.75Khz multisync (I.e, original NEC Multisync, Multisync II or 3D, Mitsubishi AUM-1381, etc.), with a JAM!! device to interface the Atari 8-bits (the Jaguar can output analog RGB, and could be cabled directly). A more modern SVGA monitor would require interfacing the Falcon via composite as well, to handle those troublesome games that hit the hardware on the Falcon, but would give you access to higher resolutions with one of the software or hardware res expanders available for the Falcon.

BTW, if you do shop around for a 15.75Khz-capable multisync, two newsgroups to check out frequently are comp.sys.amiga.marketplace, and misc.forsale.computers.monitors. The Amiga group is where you are more likely to find such monitors, while the more generic monitors newsgroup usually has better prices. Most of the monitors for sale in the latter group are from PC owners, and to a modern PC owner, a 15.75Khz-capable multisync makes a rather poor SVGA monitor, as their typical upper scan limit of about 38Khz (vs. 48Khz for almost any current 14" SVGA) makes them a rather poor SVGA monitor (but great for the JAM!!, and even better for devices needing TV-compatible scan rates).

If you see a Mitsubishi AUM-1381, keep in mind these have one advantage over the NEC Multisyncs; it has a composite input, in addition to RGB/VGA (no S-video or chroma/luma, however). I have two of these, and I do not think you will see me parting with either one anytime soon.

```
Heres the latest update.....

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200
-----------
Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon
019 Star Raiders (with instructions)
```

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) TRADED!!!!

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $2 Mark
023 Atlantis
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) $5 LEXX
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $2 Mark
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer $2.50 JerryG
041 Thunder Fox (Complete) $5 Harvey

042 Atari 800XL w/ power supply (break and inverse keys broken) Steve $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works! no shift key!) Min $5

Atari 2600
---

044 Double Dragon (PAL, New in Box) Min $5
045 Starmaster
046 Taz (holes in end of main label) TRADED!!!!

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids
050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus
052 Bowling (small booklet)
053 Basketball
054 Defender
055 Sprint Master (small tear)
056 Moon Patrol (Multi-language)

057 Battle Zone (Multi-language)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix

017 Qix
018 Space Dungeon
019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) TRADED!!!!

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $2 Mark
023 Atlantis $2 Actigmr
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) $5 LEXX
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $2 Mark
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer $2.50 JerryG
041 Thunder Fox (Complete) $5 Harvey

Minimum increase is $2 for the systems!

042 Atari 800XL w/ power supply (break and inverse keys broken) Steve $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works! no right shift key!) Min $5

Atari 2600
---

044 Double Dragon (PAL, New in Box) Min $5
045 Starmaster
046 Taz (holes in end of main label) TRADED!!!!

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids

050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus
052 Bowling (small booklet)
053 Basketball
054 Defender
055 Sprint Master (small tear)
056 Moon Patrol (Multi-language)
057 Battle Zone (Multi-language)

Atari 7800
----

058 Midnight Mutants (complete) Min $3

Intellivision
----

059 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
060 Chip Shot Golf (with instructions) $7 Peter Pepper

2305. FA (ebay): (40) and (14) Atari 8-bit game packages

Are there any 1400xl or 1450xl 's out there in the world? I'm kinda interested in collecting 8bit stuff since my first (and still functioning) computer was the Atari 800 w/48k.

So far I've found 600xl, 800xl, and 1200xl, but the 1400 / 1450xl's are hiding.

Thanks

Tom

> channel 3?

While I have to admit to not trying this with the tuner input on my All-in-Wonder card, there is no reason it shouldn't work. All you should need is a RCA-to-"F" connector adapter, which you can pick up at your local Radio Shack.

Would you be interested breaking the items to sale. I might be
interested in purchasing one complete system. (i.e. 800xl, 1050,
printer, and a few cartridges).

I have my 130XE connected to my ATI All-In-Wonder card through the standard RF switch box (and a 300 ohm to 75 ohm converter). Works just fine. Some day, I'll put together an Atari-to-S-Video cable to get an even better picture.

Current high bidder for my Atari 800 system at $125...
This sale closes 9/15/98.

I want to be sure everyone understands this system is used, working, but used. The books alone are probably worth my original asking price, however, and does include quite a bit of software as well.

I also have most of the Antic magazines...no disks...they are in fairly good shape, and will throw those in as well....also a bunch of Compute magazines...in pretty rough shape but useable. My main objective here is to find all my Atari stuff a good home :)

Atari item list---August 29, 1998 For Sale

HARDWARE

Atari 800--48k installed--non-modified system
CX853 16k memory module------4
CX801 10k operating system---1
810 disk drive---------------2
Tape Players-----------------2--one somehow has interface cable missing
Numeric Keypad
Amdek Color1 Plus monitor--this has a glare shield on it but has a small tear...you can pull it off, buy another, hey, its your choice.
Touch Tablet-Atari--case screws removed..I don't know if this works.
Misc. joysticks, paddles, printer interface,cables, etc.
Some of the joysticks/paddles work, some don't...a real grab-bag...you'll have to test them, some can be used for parts, whatever.

BOOKS

Machine Language for Beginners---Compute
The Atari Assembler- Don & Kurt Inman
Compute's First Book of Atari
Compute's Second Book of AtaRI
Compute's Third Book of Atari
Compute's First Book of Atari Graphics
Compute's Second Book of Atari Graphics
Computer Art and AnimaTION-USING aTARI lOGO
Mapping the Atari---Compute
yOUR aTARI cOMPUTER--oSBORNE/mCgRAW hILL
Atari Basic--Albrecht, Finkel
Atari Sound and Graphics, a self teaching guide
Operating System Users Manual-Atari
Operating System Source Listing-Atari
De Re AtARI--Chris Crwford, etc

Hardware Manual--Atari--has schematics, etc

SOFTWARE

Tape based--working?? don't know for sure. If you've ever used the tape drive system, you know how difficult and painful loading this stuff can be.
Moon Shuttle-Datasoft
Blue Max-Synapse
Zaxxon-Datasoft---one of my all time favorites
Juggles Rainbow-Atari
Target Practice-Gentry
Stratos-Adventure International--another great one
Pool-Thorn
Darts-Thorn
cribbage/dominoes-Thorn
An Invitation to Programming 2 and 3- Atari

Floppy

Sands of Egypt-Datasoft
Temple of Apshai-Epyx
Curse of Ra-Epyx
Sargon III-
Zork I-Infocom
Mickey in the Great Outdoors-Disney
Deadline-Infocom

No Boxes-but all original disk(not pirated)

koronis rift-lucas
rescue on fractulus
bruce lee
fantastic 4
survivor
spider man
cranston manor adventure
orileys mine
caverns of mars
genesis
shadow world
dimension x
zeppelin
maniac miner
summer games

misc stuff--a couple of Antic disks, some copied stuff, etc

Carts

Jumbo Jet Pilot-Thorn
basic computing Language-Atari---2 of these
Pac-Man-Atari
Atari Artist-used with above tablet

Pole Position-Atari
Super Breakout-Atari
ET Phone Home-Atari
Star Rai ders-Atari--THE classic
Qix--atari
Basketball-Atari Compare this to NBA Live 98 :)
Return of the Jedi-Lucasarts
Joust-Atari---another great one
Missile Command-Atari---Classic yet again
Computer Chess-Atari
Donkey Kong-Atari---I'm getting nostalgic
Centipede-Atari--Many hours on this one
Music Composer-Atari

2315. ANNOUNCE: Atari800Win 2.4

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-09 00:00:00 UTC
From: rich@cstone.net
Message-ID: <pgpmoose.199809090659.22837@bureau42.ml.org>
Source record: 60133
Cross-posted to: comp.sys.atari.8bit,comp.emulators.announce

I have updated Atari800win at the usual home page,

http://www.cris.com/~Twist/atari800win

Atari800Win is an Atari 8-bit emulator for the Win9X/NT environment.
It emulates the Atari800, 800XL, XE series, and 5200 systems.

Here is what is new in version 2.4:

09-08-98 Ver 2.4 - large update, some beta features
* A request: I am looking for an image of the 8-bit Epyx game
"Hellfire Warrior". I'm not sure if it was available for the
Atari, but it was for the Apple][. I own this game, but only have
the TRS-80 disk image.If you can help, please e-mail
rich@cstone.net

* Big feature: support for save states (also known as "snapshots").
You must have ZLIB working (the DLL supplied with Atari800Win must
be in the path) to use this. Saved states saves _everything_ about
your Atari itself, the entire contents of memory, where you are in
a program, etc. A save state does NOT save your display, input, or
sound settings. When you load a state save, the Atari will be
paused on a black screen. Hit F9 to start the saved state. Saved
state file sizes will vary based on the machine type and what it
was doing / had loaded.

Use the File menu to access the Load/Save state features. There
are two types of save: normal and verbose. Verbose is ONLY
necessary if you have patched ROMS that somebody else wouldn't
have. Verbose saves are larger.

Save states should be considered a somewhat beta feature. Changes
might affect the format as other Atari800 ports adopt it, making
the current format obselete. Keep in mind that even if you
snapshot a program it may still want to access the disk later; and
save states do NOT save disks. If you know a program accesses the
disk, you will have to keep the disk handy with your save state to
resume later. Save state are machine independent; they will be
useable on other ports of Atari800.

* Machine language routines here and there; small speed difference.
I spent considerable time rewriting some large sections in
assembly, and found there was little speed increase in them even
when heavily optimized.I'll continue investigating asm for things
like Antic though.
* Atari crashes are much less dramatic now, as you don't have to

exit Atari800Win. The screen will simply go black, you then have
the opportunity to change settings, and there is a new
Atari/Restart menu option to fire the machine up again (Ctrl-F5
will also work).
* Added 512x384 mode. Should help those on slow machines without 320
modes. Shows full overscan and on most cards has that "scanline"
feel.
* Completely rewrote the keyboard handler, many changes include:
- A few layout changes; see README.TXT
- Insert/Delete work correctly (char normally, line when shifted)
- Clear character now on the Windows Home key
- Option/Select/Start can be held down in combinations,fixes some
demos
- When holding a regular key, pressing then releasing a second key
will have no effect (the first key will stay held).
- Hold down a regular key, hold down a second. Release the first
key.The Atari will register the second key as being held down
after exactly 1 frame of no keys.
- F1-F4 exist only for XL, returns no keyboard code for other
machines.
- Help returns no code for non XL/XE machine
- With CTRL + SHIFT held, the following keys do NOT work on
purpose:
J K L ; + * Z X C V B F1 F2 F3 F4 and HELP
In many cases the new behavior my seem more limiting than before;
but it is now highly accurate compared to the real hardware. Many
hours in testing with a real XE back this up. Since there is
considerable new code there may be an errant key here or there;
please e-mail me if you find keyboard oddities (or if you find
things fixed!)
* Keyboard templates option added (Options/Keyboard.. menu). This is
a complicated feature for expert users, consult the README for
details.Do not mess with it if you don't understand the purpose.
Briefly, It allows you to remap almost the entire keyboard to
anything you wish to define. Helpful for games that use whacked
out directional keys like the Ultima series or if you want to
exactly duplicate the Atari layout.
* Keyboard joystick reworked. Now handles combination keys (numpad4
+ numpad8 = diagonal up/right). Ignores your Windows key delay /
repeat settings and works right off the keystroke (instant
feedback).
* Checkbox for "use AGP memory", which controls whether a surface is
allocated as "local video memory" in Ddraw terms. This is
basically for DDraw windowed modes, and could be faster, musch
slower, or no change on any particular card - you'll just have to
try it and compare.
* Fixed a problem with small graphics selector dialog used in 320
modes.
* All full screen modes clear their backgrounds.
* Bolder, more ambitious icons, less filling but taste great. Any

icon artists out there?
* Machine type and speed shown in window title (status bar in full
screen)
* Finally remembered to add keyboard click. You will notice a slight
delay between the keystroke and sound, can't be helped at present.
* Fixed a display bug that had crept in when in windowed mode with
the display partially off the desktop
* If you exit while running full speed, the next time you launch
sound
will be (correctly) disabled until you switch back to normal speed
* Pause shows paused text on Atari screen (for full screen modes)
* Fixed crash bug that sometimes occurred changing artifacting
modes.

2316. Atari Terminal Emulator Wanted

Newsgroup: comp.sys.atari.8bit

Message-ID: <35F75232.C82ABF5F@home.com>
Source record: 60136

I recall seeing an article about an 8 bit program that would allow one to control a model railroad with the Atari using the joystick ports as well as an Analog article on the Radio Shack Armatron.

I'd like to use my Atari as a control for a bunch of mechanical Halloween props(skeleton arms, etc.)...using relays.

Can someone point me to online versions of these articles and or the programs that went with them and anything else that might help with this type of project?

Thanks

-Lance-

> the differences between the JAM over the Atari Classics modification
> of the 8-bit ? In other words, which one should I make ?

These are two different things, although they go quite well together
as far as i know.

The Atari Classics Video uppgrade is a modification of your computer
that will improve the way the Atari creates the video signal. Which
in turn will make the croma/luma signal out of the Atari much better.
(croma/luma is also known as S-VIDEO).
The info can be found at:
http://members.delphi.com/lmcclure/svxl/index.html

Jam is a device that allows you to hook any video source to a standard
PC VGA monitor. It is made by AIMS labs. Their web page is at:
http://www.aimslab.com/

Hope this helps.

Regards Olav Queseth

2320. the number of colors Atari has

Lance,
Analog magazine was famous for their projects. I believe that is where
you saw these articles. However, I have no clue as to which ones theye
were. On the other hand, there is a really great resource for this type
of thing. There is a book w/disk called "Your Atari Comes Alive" by
Richard Leinecker and David Burd (Alpah Systems) This book is available
through B&C Computervisions www.myatari.com. It shows you how to make
almost any kind of control/data acquisition interface, from very simple
to rather complex. Additional info is available in the Radio Shack
project books (small 20-50 page booklets). These are very inexpensive
too.

```
The 8-bit machines (800/XL/XE) can display up to 256 colours (16 hues
* 16 levels of brightness) but you have to resort to trickery.
Standard BASIC can give you a max of 9 true colours, or 16 colours of
the same brightness, or 16 levels of brightness of the same colour.

Don't remember seeing any posts re the update(s) being released, anyway
the new version is out with save state added. Works a treat too :)

Lots of other bits and bobs, grab it from Daves classics or Emu news as
Rich has bandwidth probs.

Rich, any news on the Monitor addition ?

Can't get used to the new keyboard thing where it seems to swap keys
after pressing the Crtl F1 to load an image, after that the START,
SELECT & OPTION keys and the shift F5 to reset stops working till the
Crtl key is tapped ??

This in 800B mode too ??...Is it me only..Win 98 up to tricks ?

Source record: 60150

Does anybody else feel that the instructions for the various RAM upgrades for the 8 bit out there aren't very good? All of the reviews in Antic that I read about say how terribly easy it is and how the instructions are very clear. I'm guessing that most of the 256k upgrades are all done basically the same way, and that all should be pretty easy. But why can't I figure it out?

Maybe I should just stay away from the iron, but perhaps somebody could put together a nice html doc or something. I know it would help me, and perhaps even all of the new faces I've been seeing. (yeah, I know I never post, but that's because most of this stuff is over my head.)

I'd be willing to help in any way that I could....

Eric

I've decide to extend the auction until monday night due to the fact
that I will not have computer access this weekend.

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 14th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender
007 Dig Dug
008 Frogger
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon

019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) TRADED!!!!

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $2 Mark
023 Atlantis $2 Actigmr
024 Battle Zone (Complete) Min $5
025 Basic (version C)
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) $5 LEXX
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $2 Mark
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer $2.50 JerryG
041 Thunder Fox (Complete) $5 Harvey

Minimum increase is $2 for the systems!

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works! no right shift key) protoman $7

Atari 2600
---

044 Double Dragon (PAL, New in Box) Min $5
045 Starmaster
046 Taz (holes in end of main label) TRADED!!!!

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids
050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus

052 Bowling (small booklet)
053 Basketball
054 Defender
055 Sprint Master (small tear)
056 Moon Patrol (Multi-language)
057 Battle Zone (Multi-language)

Atari 7800
----

058 Midnight Mutants (complete) Min $3

Intellivision
----

059 Night Stalker (ShrinkWraped, box slightly crushed) Min $3
060 Chip Shot Golf (with instructions) $7 Peter Pepper

> Anybody knows Atari Basic binary file format? I.e. format of .BAS files.

Every Basic Command is saved as a token. If a Statement need parameters,
then the parameters are stored at the following Bytes (Just like
assembly-
language). AIAK the BAS files are a memory dump, but I am not sure.

I have an German Book playing, leraning and working with Atari
(original Title: "Spielen, Lernen und Arbeiten mit dem Atari")
The Tokens are described there.
I also have an simple Disassembler wrote in BASIC.

If you need something, post to this group.

(I will try to scan some pages, if you need them)

There is no simple answer to this question for the Atari 800/XL/XE series.

"The exact number of colors" depends on the graphic mode and whether player/missile graphics (sprites) are used (more colors). Excluding the two 16-color modes (which have restricted palettes--either one hue or one luminance--and rather wide pixels), and without using advanced programming tricks, the most you can get is 9, from a palette of 128 possible colors. Using advanced programming techniques, it's easy to get 128 colors on screen at once, or up to 256, by changing colors on-the-fly in one of the 16-color modes. It's even possible, using very tricky techniques involving switching rapidly between two different pictures, to get even more colors (up to 4096, I believe).

Message-ID: <35F87427.EE0BAA75@sisna.com>
Source record: 60155

I several years ago bought the Rights to the Supara Hard Drive Intercace for the Atari 8-bit computer. I was told that this was the better of all as it could interface all and any, cd rom, ect? Perhaps I was missinformed?. But not only on but several programers have stated the same remarks, If I had purchased the rights to any then this was the way to go???

I have had programers come and go. I have sepent $$$$ on an upgrade board ect to make it compatable with the MIO/BB.? and today I still have all rights to the board and programs issued by Supra in earlier years.

The, interface is available for $80.00, s/h 8.00 comes with disk documentation to change the ROM or I can do it. Original Supra ROM was 20 mg, can change that and open up sectors not availabole to 112 mg on a scsi drive that will read/write 212 bytes per sector on either an Adabtec 4000, 4000a,or 5500, or an Ompti Scsi to MFM board.

If, you have a high copasity Scsi drive, above 20, then let me know and will build a ROM for your drive same price.

I have set up and Internet Special for a BBS program for the Internet Users, I have received requests for SIO to PC compatable.???

Never tried it. Never used the software?

This program requires an Atari 8-Bit system along with a Hard Drive system. Does not matter if it is a Black Box or a Mio or a KPI, but the program will not run on 1 Atari 1050 disk drive...The minimum it possibley would run on is an Atari 800xl computer, a setup of 4 atari dounble density disk driver, or 4 double density double sided disk drives.(ran that mysely) before I bought the right to the program but is performs better with a Hard Dive!!!

Message-ID: <6t9sf9$m5a$1@nnrp1.dejanews.com>
Source record: 60158

I've working on a proxy server that someone might be interested in playing with. When it's finished, you will be able to use your PC as a go-between, between your A8 and the web. It should even work with dumb terminals as well, like VT's, etc. On the PC side you'll need it's internet connection, a 2nd COM port, and a null modem cable. On the 8-bit side you'll need BobTerm, and a serial interface. I don't have things set up to test it out on the 8-bit side, and I would like for someone to test it out. You can get it at:

ftp://closertohome.dyn.ml.org/ftp/pub/Atari_8bit/New/Proxy.exe

<If> it works, you will see html come across the 8-bit screen from the net. That's what I need to know, is if the proxy-to-serial part of the code is working correctly. I've got the winsock part all worked out. Thank you.

I've got the format from another person from this group. The decompiler
works ok for all files except one. It has those 7 pointers at the start
and then 32 bytes of free space.

So that I need only correct description of these pointers. They're
copied to $80-$8D.

> Atari 2600
> Atari 5200
> Atari 7800
> Atari ST
>

All the 8 bit Atari home computer systems (Atari 800/XL/XE/GS etc.) have a pallet of 256 colours (actually 16 different colours each had 16 shades/levels of brightness [16*16=256]). Very early 400 and 800 machines had only 128 colours (I think they had only 8 levels of brightness for each of the 16 colours.

The very early Atari's had a video chip called CTIA (128 colours), this was replaced in mid production with a chip called GTIA which could display the extra colours (256 total). I would guess 99% of hardware around now has GTIA.

In Normal Basic programming ALL Atari's could display between 2 and 4 colours, from the pallet of 256. Once GTIA was fitted you gained some extra graphic modes (9, 10 and 11 I think). These modes gave;
a) 16 colours of any one of the 16 levels of brightness
b) 16 levels of brightness of any chosen colour
c) 9 independent colours (brightness and colour)
*PMG colour register used see below

As I said above, standard graphic modes could display between 2 and 4 independent colours. If you used PMG's (Player Missile Graphics [Sprites]) you could add these to the graphic mode displayable colour. To used PMG would require a few Poke's in memory to set them up and define there shape and position, but is perfectly possible from basic. The colour registers for the PMG were used by GTIA in one mode to display the extra normal colours. This meant you would have to be shared with the register with PMG's a normal drawing.

Incidentally you had 3 OS/hardware generated GTIA modes, but you could turn GTIA operation on in any graphic mode, either of the 3 modes of operation

Going beyond basic you could use machine code to interrupt the screen drawing processor, change the colour registers to new values, and then let the graphic processor carry on where it left off. Doing this you could easily display the whole pallet of 256 colours on the screen at once.

There were bit's of software out there demo's and commercial, that claim to display far more colours than the hard ware was supposed to be capable of displaying (HIP demo's, Technicolor dream by red rat software). This software uses very tightly times Machine code to give to impression to the human eye there are a lot more colours. however I think that if you froze time the instant the screen was draw, you would not find more than the 256 limit on the screen.

The Atari 2600 was the for runner to the 400 and 800 xl/xe et al. As such I think you will find it was only fitted with a CTIA so I guess only 128 colours are available.

The 5200 has similar capabilities to a the home computers
Colours: 256, 16 on-screen
Resolution: 320x192
this is the machine that replaced the 2600. emulators such as rainbow, and atari800win seem to support this system by just running up with the require OS/ROMs, so I guess it cannot be that far off a standard 4/800/xl/xe/...

I am unsure on the 7800, I have seen some very impressive screen shots.

There is a faq on the Atari game consoles at
http://www.cs.colostate.edu/~dzubera/2600faq.txt
it dose cover 2600, 5200 and 7800.
--

The ST had a pallet of 512 colours in standard mode you had 16, 4 or black and white colour modes

The STe was the same but had a larger pallet of 4095 colours

Also I seem to remember the TT/030 had 256 colour standard mode, and the Falcon could display true colour images. (No machine code required)

Both the STe and ST could use machine code programming to do tricks to display more that the standard number of colours in either 16 or 4 colour mode. The machine code tricks did pretty much the same as on the old 8 bit range.

ST range computers had no hardware sprites.

You could also fit 3rd party graphic cards to ST's which could give higher resolutions and many more colours, but none of these took on as a standard.

Hope this helps

Do you *need* it for the Atari 8 bit.

The reason I say this is you can get two CD roms with *ALL* the infocom text adventures on. The CD's will run in either MAC or PC, and you get all the paper work as well.

I tell a slight lie "Leather Godess of Phobos" is missing from the collection. If you want though, you can send off for the the PC version on floppy.

BTW in the UK the CD's cost me £30 each. Which is what one game used to cost in the good old days.

2345. Atari 400 Video/JAM?

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

The 400 outputs RF to a TV. All the classic systems output RF. Starting with the NES you were able to output composite video and audio or RF. The playstation and the saturn no longer have RF they are composite or S-video only. You need an RF Modulator to get RF output. But since most new tv's have direct A/V you don't need RF anymore. Besides RF is subject to interference.

The JAM only works with direct video like composite or S-video.

: the paper work as well.

Yeah, this is a far more preferable way to be playing the games in that
whenever you want to restart a game, it's quick and easy; you don't have
to reload two sides of a floppy every time. I remember that was
particularly maddening when I played "Planetfall." It took me like forty
attempts before I was able to finish was basically amounted to was like
the last three steps of the game! Take took like an hour!

I have a few minor complaints, however. Some of the versions (in terms of
bugs or problem solving techniques) don't always correspond to the Atari,
even though all platforms were supposedly identical. An example: In
"Zork III," you could put the torch in the chest (which was water-tight)
and take that with you to that dark room where the key was. The PC
version, as found on the CD-ROM (don't know if previous versions allowed
this alternate solution), you only have to rely the anti-grue spray can.

<thijs.aaten@xs4all.nl> stated:

> Where can I find info on how to build the JAM! ?

You do not have to build the JAM!! - it is a retail product sold by AIMS
Labs. Electronics Boutique is one place that carries it, and you should
also be able to find it at Best Buy, among other places.

> And what are exactly the differences between the JAM over
> the atari classics modification of the 8-bit ?

Which Atari Classics mod are you talking about? There was more than one.

Assuming you are talking of the SuperVideoXL 2.1 mod, if you have an XL,
you should do this if you plan to hook your Atari up to the S-video input
of the JAM!!, to get the best results.

You can find the SVXL 2.1 mod at:
http://members.delphi.com/lmcclure/svxl/index.html

Eh, I might have let that slip. Corrected it at one point, but had to revert some code in between and might have lost it. I'll check into it tonight and fix it if so, in the meantime use the menu to avoid any trouble.

Hi Rene,

Long time, no type! :-) Sorry about the dns resolution problems. I'm having trouble with my regular name server at ml.org. Here's an alternate URL you can try:

ftp://cth.tzo.com/ftp/pub/Atari_8bit/New/Proxy.exe

If you need the VB5 runtime, you can also download it at:

ftp://cth.tzo.com/ftp/pub/Atari_8bit/New/msvb50.zip

Or just surf the site at:

http://cth.tzo.com/index.html

BTW- I'm just trying out tzo.com for 30 days as my name server. I haven't made up my mind if I'm going to stick with ml.org or switch over to tzo.com yet.

Regards,
Tom

There are a couple people here locally using it w/ a PC-TV card that
displays the Atari output in a little window on the desktop. Works
pretty well, except artifacting does not look right in gr 8 games.

I havent tried JAM! but I imagine it does something similar.

Good man...knew it was, will it be in the same format as the dos version
ie some of the way you input bytes is diff to the normal or a standard
bit like :-

S 0000 10000 a9 00 8d

for search between 0 & 1000 for those bytes, seem to remember the dos
one worked another way..

That's if you have even had time to think about the monitor side as yet.
:)

I believe the 400 is the only Atari 8-bit model that has no composite
video output, only RF output which you connect via a "tv/game" box to the
antenna terminals on a tv. It won't work with JAM without some kind of
composite signal output.

2365. Reading Atari disks on IBM

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-12 00:00:00 UTC
From: "Jonathan S. Gould" <outback@mhonline.net>
Message-ID: <35FB353E.BB6AE56E@mhonline.net>
Source record: 60040

Can someone point me to a program that will allow my IBM clone to read
Atari disks? I know that programs like this exist (or at least used
to) It would be great if I could also write to the disks so the Atari
could read them.

Most of my disks are Atari 1050 format, but I also have XF551 drives
now...

Thanx

>What is the correct terminology for the Video Signal coming out of the
>400/800?

800 had composite monitor output. 400 had
RF (TV) signal only. But, if you have a 400
and feel adventurous, a monitor output can be
grafted into the 400. As I recall, there was
an article in an early Antic or Analog. JAM!!
does not work with RF. I have always really
disliked reading text files on the Atari. It is
now a pleasure with the JAM!!.

Not sure I understand this. The ROM change will allow R/W to a larger EMBEDDED
SCSI drive. And will R/W 212 (???) bytes/sector
using a Adaptec (type) controller with an MFM drive? Do you mean 512 byte
sectors? And this only works with MFM drives? Can
you clarify this for me. (I have a SUPRA
interface that was originally for a 10 MB MFM Miniscribe.)

> It's much faster then the 19200baud SIO2PC...
no
With Atari's 1.79 mHz clock & screen on it can perform about 100k
instructions per second. For most real life transfers you need to grab
something from somewhere, put it somewhere else, increment a counter or
two, maybe do some acks. This slows down any transfer to about 25k bytes
per second no matter how good the equipment you have the Atari hooked to
is. People can get maybe 38k-57k baud out of the serial port w/o too
many problems => good enough for most uses.
It is the kind of hack I used to like to do, but it is pretty esoteric.
For instance, after looking at Bob Wooley's IDE interface, I think I
could possibly hack a PC parallel port onto the Atari's memory map to
appear as part of it with maybe one or two chips. Sort of make the IBM
printer port look like a PIA or POKEY.

Hi,

I'm trying to find a copy of the game 'Traffic Panic', for the Atari 800XL. It was a small game that you had to actually type in from a book of programmes.

It involved jumping over cars, then climbing ladders to the next row, where the cars got faster. If anybody has a copy of this programme, either on tape or a copy of the actual text to type in, please e-mail me at :

gabs@cybase.co.uk

Any help would be appreciated, thanks,

Gabs

From: John Schnittker <jschnitt@gte.net>
Message-ID: <6th9av$47a$1@news-2.news.gte.net>
Source record: 60047

Hi Atarians,

I was playing the game SPINDIZZY and I notice there is are some columns of varying color across the screen. I wonder how they did that? I have written DLI's to change color registers, but only in a horizontal bar (top to bottom) fashion. I also noticed that Miner 2049er illuminates the score in gr. 0 blue background with black bars to the left and right. How did he do that? Maybe they are black player missiles?

another thing in Miner 2049er that I am amazed by is the way the numbers rotate around when you die. All the numbers are different colors, and there are too many of them to make it a possible feat with a DLI's...

maybe i'm mistaken.

Message-ID: <1998091323501800.TAA25107@ladder03.news.aol.com>
Source record: 60049

Update:
I posted about a week ago that I had hooked up the JAM!! with S-Video to my
video upgraded 130XE. I also mentioned that the video was unstable. It would
be great for a few minutes, then no picture, and I'd have to turn the JAM!! off
then back on to get the picture. To make a very long story short,
I had to remove the video upgrade from my
130XE to solve the problem. Removing the
upgrade did degrade the display slightly, but
it did solve the problem. It may be that no one
else will have this same problem (I certainly hope not), but if you do have a
video upgrade and you have a problem with the JAM!!, then
it might bear considering.

From: tross3@hamtel.tds.net
Message-ID: <6thmgv$6en@news2.tds.net>
Source record: 60053

I've posted this in c.s.a.st and c.s.a.advocacy. They're not cross-posted, but I apologise to anyone that has had to download them twice. BTW, I've sent email to Atari Games/Midway & Hasbro Interactive requesting their permission, if anyone is interested in that aspect - haven't received any replies yet.

Hi,

I have access to a KIP 2900. This machine is basically a scanner and laser printer for printing blueprints. The interesting thing is that it uses rolls of paper, so effectively, the only limit to the length of a printout is the length of a roll. This system will enlarge up to 400%, with exceptionally high quality.
This enlargement factor would put a standard US Letter (8.5"x11") out at 34"x44" (2.85' x 3.66'). Consider a banner consisting of 8 sheets taped end-to-end. 34" x 352" (2.8' x 29.33') - actually a little shorter if using individual sheets instead of banner paper, due to cutting and pasting. I'll let you convert this to metric as I'm just putting forth the idea at the moment, and will put a page up with full details if there is any interest in the idea I'm about to present.
I was working with the KIP 2900 today and started thinking.
Wouldn't it be an interesting project to do an Atari banner up - With a Fuji & something along the lines of foot-and-a-half high letters proclaiming "The Fuji Lives!" (or a phrase to be decided upon later) in english, and then translations into French, Spanish, Italian, German and other appropriate languages running in a smaller size underneath. It would then be covered front and back with lightweight, flexible vinyl (the iron-on type is very effective).
This banner could then be mailed to whoever was interested and willing to:
1. photograph it being displayed in their city
2. Arrange with local Atari users to sign it
3. Send the photographs back, along with a short essay about their city or involvement in the project.
The photographs would be put up on the web, for everyone to view and download. Eventually, we might even be able to put out a coffee table book describing its journey.
Hopefully, we could get some corporate/organizational/individual sponsorship in exchange for tastefully sized logos on the banner - this would be to defray the cost of postage and things of that nature.
Anyway, just a thought. Anyone have any thoughts or comments?

>good to anyone!. The XL, and XE do not need this item.

Unfortunately the XL's have rev B BASIC, in which the new bugs
introduced are worse than the ones that were fixed from rev A. The
BASIC cartridge is rev A (there may even be some rev C ones) so it is
of possible value to an XL owner. It also may be of value to to a
400/800 owner who lost or broke their cart. Hell, someone may just
want to collect it. I have had a long absense from this group and am
generally glad to be back... but in the few messages I've read so far
there seems to be a considerable amount of bashing what people offer
for sale. As long as it's Atari 8 stuff why not just quit picking at
it?

PS: I have an 800XL and got a rev A cartridge BASIC because I got SICK
of lockup in REV B built in to my 800XL.
I would like a REV C ROM to put in my machine. That would be best.

Funny you mention that, I've just started to really bring in my disks
into my PC in earnest. I finally dug out the 800XL and all the disks
and am transfering them all to my PC. Making DCM files then
converting them to ATR files for use with the emulators. I just did
Gauntlet and Spellunker yesterday. Already in ATR format.

Email me if you want.

In Atari BASIC, when you save a basic program to a file it is stored
in a TOKENIZED format. If my recollection is correct, the book
"Inside Atari BASIC" by Bill Wilkinson highly details exactly the
information you seem to be seeking.

Anyone care to seconf that or correct my recollection?

ATR files are for Atari 8-bit emulators, as is this newsgroup. I have
already emailed you an ATR of Spelunker only to find out you want
Atari ST software. I assumed since you were posting in the 8-bit
newsgroup you were looking for 8-bit stuff. Silly me.

Hi Jonathan!

I only know a disk out of the ABBUC PD-List. Look at the ABBUC homepage and write an eMailto Wolfgang Burger (leader of the ABBUC). It's the PD-Disk No 346 and it's called "ATARI & PC -PC Diskette".

You need a 5.25" Floppy in your IBM-Clone. To read a XL-disk on IBM you should format your disks in DD and your IBM is only able to read the first side of the disk.

I ordered it for four years I think but I don't know where it is...

OK, the ABBUC-hompage is at: www.home.t-online.de/home/wburger
Wolfgangs eMail-address is: wburger@cityweb.de

Yes you are right. But the HIP (Hard Interlacing Picture) is a new
Screenmode on XL:
Resolution: 160 x 240
Colors: 30 level of brightness
It's a mixture of Gr.9 + 10!

HIP was invented by the demogroup HARD by Tamas Bene and Teli Sandor!

Source record: 60077

I guess my question (from having years of experience in the sign
business) is why would doing this be better than just making a
vinyl banner? A vinyl banner would be weatherproof, have grommets
and webbing for tying to posts or affixing to a building and be
a heck of a lot more durable than paper.

I've made a lot of banners - a 3' x 30' vinyl banner would be
no problem, and it would be a single piece.
About the only advantages the other process *might* have would be
1 - cost (possibly)
2 - if the KIP2900 can print photographic color images. (again cost)

- vinman

Wasn't that 5 minute cassette tape that came with it cool :) I just found my p.l.a.n.e.t. certificate from completing that game when it was new. I think that was the most expensive atari program I bought. Like 27 bucks. I even remember getting the letter explaining the secret mission. I also remember having to by a field guide to the stars and planets just to figure out how to navigate. But for the life of me I can't remember anything about the game itself :) I have seen the atr around somewhere... Mark

Ok, There have been a few new bids... Auction ends today at midnight!

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk $2 Pac-Rat
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender $2 Pac-Rat
007 Dig Dug $2 Pac-Rat
008 Frogger $2 Pac-Rat
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo $2 Pac-Rat
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon
019 Star Raiders (with instructions)

020 Football Play books Min $1

021 Wico Joystick (with Y-adapter and Box) TRADED!!!!

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $2 Mark
023 Atlantis $2 Actigmr
024 Battle Zone (Complete) Min $5
025 Basic (version C) $2 Steven
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) Min $3
034 Gridrunner (R) $5 LEXX
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $2 Mark
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer $2.50 JerryG
041 Thunder Fox (Complete) $5 Harvey

Minimum increase is $2 for the systems!

042 Atari 800XL w/ power supply (break and inverse keys broken) Min $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works! no right shift key!) Protoman
$9

Atari 2600
---

044 Double Dragon (PAL, New in Box) Min $5
045 Starmaster
046 Taz (holes in end of main label) TRADED!!!!

047 Atari 2600 jr. (with power supply and instructions) Min $10

2600 Instructions (Minimum .50, Increases .25)

048 Combat (small booklet)
049 Asteroids
050 Missle Command (Multi-language)
051 Bowling (small booklet) .50 Lexus
052 Bowling (small booklet)
053 Basketball

054 Defender
055 Sprint Master (small tear)

Make sure your TV is tuned to the same station that the XE is trying to
transmit to.

> It also came with a cord to go from the system
> to the switch box, but the cord had its own little box on it. It seems
> to work with a normal cord, so what does it do?

IIRC, in that box is a little ferrite ring (or perhaps rod) which the
cord is wrapped around a few times. This is done to reduce interference
from the XE which could cause problems (like static, white noise, or
snow) with other electronic devices.

2416. ATARI2PC connection

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-14 00:00:00 UTC
From: Adi Perry <adiperry@geocities.com>
Message-ID: <35FD7AD7.AAA8E0F1@geocities.com>
Source record: 60084

Hello,

I'm looking for ways to connect my ATARI XL to PCs.
Till now I've found 3 possibilities:
1. Using a sio2pc cable:
This cable connects ATARI's serial bus to a RS-232 port
(PCs or any other common computer...)
Advantages:
Rather easy to build
Compatible with most computers these days
Disadvantages:
Quite slow. Only 19200baud

2. sio 2 lpt:
One can connect the serial bus with the PC's parallel port
I've only heard of connecting ATARI devices to PC that way
(like the 1050), and not the ATARI itself
Advantages:
Very simple to build (both use TTL levels)
Disadvantages:
Slow - 19200baud
Additional synchronizing should be implemented
Short distance cable only
Not useful for the ATARI itself (as far as I know)

3. Using the ATARI's parallel bus:
This could be done because the ATARI has a parallel
bus, which provides full memory access to external
devices, allowing memory expansions, hard disks, etc.
This could be great (CPU speed access time!) but it seems
the design should be quite complicated
Advantages:
Fastest! - maps to memory = as fast as CPU can read
Disadvantages:
Can probably work with a short cable only
Complicated to build
Has no PC interface known design (to me...)

If anyone can show me how to overcome these disadvantages, give
improvements to these designes, show me new connection methods,
or share any other useful information, I'll appreciate it...

10x,
Perry

2417. WTD: Cart list & prices

WOW! A bunch of new bids rolled in during the last hour. Make sure you
still have the high bid on that special item you just cant live without!

Welcome to Tempest's first auction or the....

I need to pay off my debts or they're going to break my legs auction.

Rules: 1. Auction ends September 11th at 11:59pm (no G1, G2 stuff)
2. You pay for what you bid on.
2. Buyouts accepted
3. I reserve the right to pull anything from the auction.
4. All items are loose, and in good condition unless noted.
5. Please send the number of the game you are bidding on
(ie. 002 Berzerk)
6. There is no rule 6!
7. You MUST have fun. (Or you will die!)

Please send all bids to: reicher6@pilot.msu.edu

Updates will be sent to the newsgroups nightly. A current update can be
found at: http://pilot.msu.edu/user/reicher6/auction.txt

So, with out further ado, here are the goodies!

Atari 5200

Minimum bid $2, Minimum increase .50

001 Ball Blazer (complete) min $5
002 Berzerk $2 Pac-Rat
003 Blue Print (Upside down label) Chapin $2
004 Centipede (complete, bad box)
005 Counter Measure
006 Defender $2 Pac-Rat
007 Dig Dug $2 Pac-Rat
008 Frogger $2 Pac-Rat
009 Gremlins (complete) $15 Pac-Rat
010 Jungle Hunt
011 Kaboom (label wear) Chapin $2
012 Kangaroo $2 Pac-Rat
013 Pac-Man
014 Pole Position
015 Q-bert
016 Qix
017 Qix
018 Space Dungeon

019 Star Raiders (with instructions)

020 Football Play books $1 THX

021 Wico Joystick (with Y-adapter and Box) TRADED!!!!

Atari 400/800

Minimum bid $2, Minimum increase .50

022 Alien Garden (label wear) $3 THX
023 Atlantis $3 THX
024 Battle Zone (Complete) Min $5
025 Basic (version C) $2 Steven
026 Basic (version C)
027 Boulders and Bombs (R) Min $5
028 Centipede
029 Demon Attack $1 rlcolli
030 Desert Falcon (Complete) Min $5
031 E.T. Phone Home (label bubbling) $1 rlcolli
032 Final Legacy
033 Food Fight (XL/XE Only) $3 THX
034 Gridrunner (R) $5 LEXX
035 Missle Command
036 Mr. Cool (R) Min $5
037 Pac-Man
038 Platter Mania (label crooked) $3 THX
039 Q-bert (no end label) $1 rlcolli
040 Sky Writer $3 THX
041 Thunder Fox (Complete) $5 Harvey

Minimum increase is $2 for the systems!

042 Atari 800XL w/ power supply (break and inverse keys broken) Steve $7
(everything else works fine!)

043 Atari 800 (Keyboard flaky but works! no right shift key!) Protoman
$9

Hi !!!

i'm just getting my feet wet with the Atari 800xl.......
I have it feeding off my XT turbo's power supply.... i'm going for the
sio2pc thing and setting up a board soon....
but i also want to learn about the atari 800xl.... can anyone point me
to a xl basic manual on the net??
I'm talking about the basic that comes with the standard atari 800xl....

can anyone point me to an online users manual for this basic??

please use e-mail when responding to this message....

thanks

Jose

Fantastic!! That is just what I needed to know. Thank you!

Next I will work on the A8 -> PC routines, so that what you type on the A8 gets sent to the proxy and then out to the net. After that, I have to decide on if I should expand the proxy server to interpret the html into vt100, vt 52, or ansi (ala lynx) before sending it to the A8. Or, if I should continue sending the raw html to the A8 and let someone else create an A8 browser to interpret and render it to the A8 screen.

Does anyone else have any thoughts on which route to take?

Thanks again,
Tom

There are two main ways to hange stuff(like colors vertically-use excruciatingly
tight timing in a machine routine during a DLI to change screen or player
colors,
or use multiple screens. I like the multiple screen method myself.
I'm sure there are other ways to do the same stuff.

> (top to bottom) fashion.

They look like PMG's (Player Missile Graphics) to me. Fill in the PMG's so that all the bits are set, give each PMG you're using a different colour and line them up side by side, and you should get exactly the effect seen in Spindizzy. Plus Spindizzy doesn't seem to use up the PMG's anywhere else.

It is also possible to set up a DLI to change a colour half way across the screen, so you can display a colour on the left hand side of the screen, change it and then display the new colour on the right hand side. However, the timing does get complicated, and with the DMA going on, you need to leave a gap between the left hand colour and the right hand one, or the colour change may jump about slightly. But as far as Spindizzy is concerned, I'm pretty sure it was done with PMG's

>a heck of a lot more durable than paper.
Hi Vinman

First, it was the KIP that gave me the idea. I have nothing against an actual vinyl banner, and it wasn't a devious plot to take food from the mouths of sign makers children. :-)

While I do defer to your experience, generally, most of the points that you brought up would have/can be handled by materials I already have on hand. I have rolls of the iron-on lamination, rolls of the iron-on interfacing (or adhesive stuff, for fabrics, whatever it is actually called) I was just planning on ironing some lightweight fabric to the back of it, and then ironing on the vinyl lamination. As for the grommets, I have hundreds of them around due to my leather-work.

Overall, in addition to the cost, there was just the flexibility - depending upon circumstances it could instantly be changed from 30 feet to 60 feet, and other items could be tacked on at the last minute (if perhaps we needed more space for signatures, or for some reason we really did get a sponsor <grin>).
>
>I've made a lot of banners - a 3' x 30' vinyl banner would be
>no problem, and it would be a single piece.
>About the only advantages the other process *might* have would be
>1 - cost (possibly)
Well, the cost advantage is there, since I already own the vinyl, adhesive, grommets and have tentative permission to print the banner at no cost at my mill's facilities (not guaranteed, however).

>2 - if the KIP2900 can print photographic color images. (again cost)
Just greyscale. The advantage to that though is that you could make a mosaic of color printouts if you wanted to (for user group logos, perhaps) and from a short distance it would appear to be whole since it was all constructed of the same material.

I would love to have an actual vinyl banner instead of the paper one. I agree that it would be much more durable. But a couple of points about a vinyl banner that worry me (serious question, not just blowing the thought off)
1 - would it be as flexible? Could we tack things on and make last

minute changes?
2 - The cost factor - in two areas. One being the actual manufacture of the banner, the second being in the weight (for postage reasons). I would imagine that the paper would weigh less, and therefore, cost less to mail - but I might be wrong.

There are a few pages with cart lists for the Atari 8 bit out there,
try these (in no particular order):

http://www.execpc.com/~krieg/links/8bit.carts

http://www.pribish.com/atari.list.8b.company.html

http://www.geocities.com/TimesSquare/Castle/4533/xe.htm

http://pilot.msu.edu/user/reicher6/8bit.htm

http://www.geocities.com/SiliconValley/7837/at800.htm

http://www.xocolatl.com/carts/at800.html

I don't think any of them have an approximate price list, but some do
have rarity information and/or cart number / manufacturer.

Same here, although I didn't really have the time I needed to give it a
good workout.

About your second question: I think getting a Web browser done would be
the priority. The guys in my user group were enchanted with Lynx when
they first started out, but I think they kind of hunger for a more
graphical display.

Years ago I saw a great sound/picture demo, called "___'s game"
I think-- possibly Megan's. There were a bunch of 2-D blocks on screen
that you could drop from on high, and each bounce made a cool tone. You
could pull out a block from a pile of them, and they'd all come falling
down making a beautiful cascade of sound.

Can anyone confirm the name, and can anyone tell me where I could find it
online?

I was hoping to maybe start out with a lynx style browser to begin with. Then after that, maybe a graphical browser. The graphical browser would be a challenge. First off, should we stick to 320 resolution, or opt for both horizontal and vertical scrolling with a much larger virtual screen? If we go with the latter, then probably less than 1/3 of any given web page will be on the screen at a time. This could be annoying, to have to scroll right, and left, and right, and left, etc., just to read a page. But if we go with the former, images will be reduced so much in size that they will loose much of their resolution. The PC could provide the horsepower for reducing these images before sending them to the 8-bit. I'll have to play with image reducing routines to see how suitable this approach could be.

What settings did you use for the proxy server? Were the default settings OK?

Why RealMedia? Why can't we just download the file to out 8 bit and
display it on there?

2432. Re: FS 8bit art package (US) - correction to ad

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-15 00:00:00 UTC
From: gwestndrf@aol.com
Message-ID: <1998091520465800.QAA25683@ladder03.news.aol.com>
Source record: 60001

To my great embarrassment, I discovered that I no longer have the original copy of the YEMACYB software advertised in the originally posted ad. Although it's a completely different type of program, I'm now offering Antic's Graphic Shop in it's place.

My ad should now read as follows:

I the following items for sale.

Hardware:
KoalaPad sketchpad with stylus and programmer's guide
Atari 1020 color plotter with power supply, I/O cable and ink cartridges

Many of the ink cartridges are brand new and are a mix of black, blue, green and red ink.

Software:
Micro Illustrator (no manual) - disk
RAMbrandt (doc on disk) - disk
Graphic Shop (doc on disk) - disk
Joystick Sketchpad and manual - cassette

All of above for $20.00 plus shipping to US addresses. Offers will be considered.

Please reply via e-mail to Gail at gwestndrf@aol.com.

2433. Re: ATARI2PC connection

The SIO2PC cable works great, its time proven, many people use, and
software to make it work is widely available.
Why bother with something else?
As far as the speed "disadvantage", what kind of programs are you
planning on running with your XL? Any program I've ever loaded seems
to go almost instantly.
Seriously, is there that big of a difference between a 4 second load
time vs. a 4 mil sec. load time when it comes to small 8 bit programs?

I used 19200,N,8,1. I have a BB hooked up to my 800XL so I can do
19.2. In fact, I have been DCMing my many A8 disks and bringing them
to my PC with a null modem cable using Qmodem 95 on the PC side and
Bobterm 1.21 on the XL side. I then translate the DCMs to ATRs for
use with Atari800Win. So I was all set up to test your program
already.

The defaults were fine. My null-modem cable comes out of COM 2 at the
PC end and 9600 baud is about what my P: R: will handle. I never did
get a faster interface.

It was called "Janes Game", not sure where the "game" came in? It was nice to play with though.

I have a copy on 8 bit floppy but no way of getting it online, As yet. My web page is on it's way, but may take a few weeks to get ready and online, too many other distractions IRL :(. Plus I'll have to get an APE cable and software.

Any way that is the name of the program in the UK. If any one else has a copy maybe they can point you in hte right direction

cheers
Dave

Paul,
I have the info for building the Antic Sound Processor. This is a very
simple to build digitiser that was persented in Antic Volume8 Number 8
issue. I have all of the software for it plus a very upgraded BASIC XL
program I wrote from the included original player.bas program. I'll scan
in the article and schematic for you if you want it. The interface costs
about $15.00 US in Radio Shack parts (regular off the shelf stuff).
E-mail me if you are interested.

And take it out of the frame :) Let me see if I can find a scanner. I should
have saved the letters and all but I think my ex tossed that kind of stuff
out.

I also have the hitchhikers guide to the galaxy stuff. Don't panic button,
peril sensitive sunglasses. Micro space fleet, fluff, and the 2 orders for
destruction certificates.

Hi all. Quite some time ago one of the gentlemen that frequented this
ng was looking for that space shuttle program. I told him I had it
but that it was burried with all my Atari8 stuff in boxes and that
when I got the old glory back out again I would hunt it up for him. I
saved his name and email address but... after a major system & OS
upgrade on my PC I no longer have that correspondance. So... if you
are the one I am speaking of please reply. I have what you want(ed)
albeit eons late. Let me know who you are even if you no longer need
the program.

PS: I am currently transferin ALL (or at least almost all) my Atari8
stuff onto my PC. So I will have MEGA Atari8 software available for
easy sharing.

Ciao

Jon

From: Richard Hinkson <rhinkson@sunbeach.net>
Message-ID: <36004324.9F3DB2C7@sunbeach.net>
Source record: 60025

I keep reading about the SIO2PC cable, but haven't been able to find any details - has anyone got the pinout details so that I can manufacture this cable?

I am also very intetested in sourcing technical details on the original Atari 1050 Disk Drives as the two units I have have both failed - any suggestions on finding replacement units or having these two serviced would be appreciated.

I am looking to complete some parts of my 2600 collection, so I need the
following games

SwordQuest: Water World
Asterix
Crazy Climber
Rubiks Cube
Motorodeo
Ikari Warriors
Sentinel
BMX Airmaster
Cosmic Commuter

Anything else not on my list....

My trade/own list can be accessed at:

http://pilot.msu.edu/user/reicher6/2600.txt
or
http://pilot.msu.edu/user/reicher6/atari.htm

I'm willing to trade most things on the list, try me.

Updated 09/16/98

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask. I am open to reasonable offers on all items.

Please make all offers in U.S. Funds (buyer pays shipping). I am also willing to trade for some rare or shrink-wrapped/sealed titles for...
- Intellivision, ColecoVision, or various Atari systems
- Shrink-wrapped or mint SEARS Telegames for the Intellivision.
- A working Intellivision Music Synthesizer
- Rarer Mattel and Coleco Handhelds.
- And of course the ever popular, original Intellivision keyboard :)

If you are interested please respond to jim_lazarenko@NOSPAM.powersurfr.com (removing the NOSPAM first)

Hardware Please make an offer
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 800XL No Power Supply
-Atari 600XL With Power Supply, RF Cable
-Atari 520 ST Missing all accesories
Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers Please make an offer
==========
-Paddles (multiple sets) -for Atari & Commodore units
-2x Suncom Tac Joysticks -for Atari & Commodore units
-2x Wico Joystick (Black handle with grey base) -for Atari & Commodore units
-1x Spectravideo Joystick with suction cup base -for Atari & Commodore units

Cartridges Please make an offer
==========
- Atari Writer
- Basic
- Centipede
- Defender
- Donkey Kong
- Donkey Kong Junior
- Eastern Front (1941)

- Final Legacy
- Frogger
- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Miner 2049er
- Missle Command
- Moon Patrol
- Ms. Pacman
- Pac-Man
- Pole Position
- Qbert
- Realsports Football
- Robotron: 2084
- Star Raiders
- Tennis

Books and Manuals Please make an offer
==========
- Atari 800XL Manual and connection guide
- Atari 1050 Manual
- Consumer's Guide "The Users Guide to the Atari"
- Compute's "Third book of Atari"
- Compute's "The Atari Basic Source Book"

Magazines and Specification sheets Please make an offer
==========
- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

North American Gaming Magazines

2463. Assembly language

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-17 00:00:00 UTC
From: savetz@my-dejanews.com
Message-ID: <6tqe2i$6fi$1@nnrp1.dejanews.com>
Source record: 59939

I'm teaching myself Assembly Language on the Atari 8-bits. It's something I always wanted to know as a kid, and I'm finally getting around to learning. Why? For the same reason that people study Latin, I guess. Who cares if it's a dead language; it's interesting.

I've read several books on the topic so far, but found a strange statement near the back of the manual for Atari's Assembler Editor: it is not well suited for development of large programs, and it shouldn't be used to develop object code greater than 10% of your Atari's memory. Was someone just being cautious when they wrote this? Does the Assembler Editor have extraordinary overhead compared to other assemblers? Could one develop an 8K cartridge game with the Assembler Editor and 64K or 128K?

Does anyone else dabble in Assembly anymore?

I do dabble a bit from time to time. I would like to say that I personally like Macro Assembler better than Assembler Editor. I can write the code as large as I want and you don't have to be afraid of not getting enough memory for source code, as it's only to include the next part and when you assemble it, it do it directly to disk. Have you done anything interesting ? Anywhere to get it to see ? Let me know if we can work on something together. That goes for Sean sean@thegate.demon.co.uk and John Schnittker too. Take care

Source record: 59943

Good for you, I still program on and off in Assembly Language for a living.
As such would disagree it's a "dead language". Some people say Atari is
dead, but I think (hope) most people in this group wouldn't agree.

Modern Compilers do prduce some very good/efficent code, but every now and
then they do need human intervention. If you don't understand assembly it
can somtimes slow up the optimisation of functions, even if you optimise
the code at a high level, C or pascal etc.

==========
Message to every one else!
==========
NO semi/full flame sessions on why assembly/Atari IS dead, the above view
is my view and you won't change it :)
Besides I think most people have heard all the arguments (for and against)
many times before, so let's not waste bandwidth.
==========

Back to your question;
The Assembler Editor Cart is missing a lot of the features used in writing
large assembly programs, such a macro's. I think it's memory usage is a
little like Atari BASIC's and so hog's most (but not all) of page zero.
You will find page zero usefull for writing fast code (Look up, zero page
addressing). This will not stop you writing large?(what's large?) programs
in assembler editor, it's just NOT the best solution for the job. You will
after your code reaches a certian size find yourself solving more
problem/limitations of the Assembler than writing code.

For leaning to program and tinkering about with small routines the
Assembler Editor Cart is more than adiquiate. (I learnt to program in
Assembly with this cart).

When you feel a little more adventurous you should try to get a copy of
Atari's "Macro Assembler" or "Mac65".

Another thing you will come accross if you use a cartridge based assembler.
I if you want to write a cartridge based program (note same memory area).
You will have to write it somewhere else in memory and then relocate, your
code, to the memory area used by your assembler/debugger when you are ready
to do final testing. Thus no assembler/debugger any more. It can be done,
but it's a little bit messy.

Having more memory above the 48k RAM will not help, as the assembler editor
cart was written before this was commonly available/affordable. You can
write programs to take advantage of this extra memory but it's not the best
solution.

Good luck in your programming efforts.
Stick with it (doing somthing because you enjoy it, is the best reason to
do it.)

Dave

The mac65 manual (along with many others) can be found at:
http://www.crestviewfl.com/~richard/atari-docs.htm

it won't teach you 6502 assembly language, but it'll teach you how to use mac65

Do you have any experience with action! It seems like an easy language to program in. And I have seen run time routines for compiling stand alone apps. I had the macro assembler years ago but never really learned.

I'm thinking about getting back into programming the atari just for nostalgia :)

Mark

David,

Has this passed into PD, yet? How does one go about getting a copy of
either of these?

>Good luck in your programming efforts.
>Stick with it (doing somthing because you enjoy it, is the best reason to
>do it.)
>

Putting aside the question of the general merits of writing assembly
code--clearly compilers don't write themselves--I don't think there are too
many utilitarian arguments for learning to write 6502 code.

Then again there aren't too many practical arguments that recommend
restoring and riding old motorcycles either. :-)

Action! can't do the stuff you do in assembly. Unless you code all the routines in data statements or something (I never used Action!, but expect it has a way of handling data statements)

Try the 6502 and I think it's a useful experience. Even if not many use the it, if you understand the logic of it, it's easier to try 68000 or whatever.

Good luck and don't hesitate to ask, and I'll try to help as good as I can.
Take Atarian care

Maybe it's not as optimized as Assembler, but Action! is a *HIGHLY*
optimizing compiler. I never did much with it, either (and sold my cart
years ago), but I fooled around with it and also typed in some programs from
magazines and it really was cool. Something like it should be available for
PCs...

thanks guys, I already know 6502 asm OK, I got docs about registers and stuff, and my old DOS-XL manual tells how to do I/O.

Also give my assembler KASM available at umich or my page a try. It is a
disk to disk
assembler like the Atari Macro Assembler and supports almost all of its
features except
it is a little faster, supports command lines from some DOS's, doesn't
produce a bunch of
small segments in the output file, and it is free.
It also supports some Mac/65 psuedo-ops and its macro definition format and
can addionally
replace RA65 (the CC65 assembler).

(Wants Mac 65 docs or to know if there's a better Macro Assembler).
I dunno.
The csa8 FAQ mentions about a dozen Assemblers for the A8 and
a few cross assemblers to use with Unix machines, or something.
The Mac 65 is probably still for sale, along with the book,
at Bravo Sierra, B&C, Best and maybe other places.
The Macro Assembler Editor (MAE known as). By John Harris,
seems very much liked, advanced macro assembler/editor.
It is free, along with a text file, at www.umich.edu/(squiggle)archive/
atari/8bit. Under the Languages directory.
A pretty nice assembler tutorial, meant for the Atari Assembler
Editor, is at the Cleveland Freenet. If you can telnet, then
telnet> freenet-in-a.cwru.edu.
log on as guest. go atari at prompt. pick the Library, then
MISC text files. The tutorial is about msg. # 111.

>I wanted to know where I could find out how to use the mac65 assembler
>or if there is a better assembler I should use.

If you are just starting out, I would suggest the
Atari Assembler/Editor cart. And I would check the "for sales" for a copy of
" the Atari Assembler" by Don & Kurt Inman.
The A/E is slow, and not good for large projects, but for writing m/l routines
for BASIC programs, and learning, it is fine IMO.
Mac65 is a very good assembler, and being
a macro assembler, it allows using pre-written
macros (code modules) from libraries such as
the "Mac65 Toolkit" to make a project much
easier.

Unfortunately i ditched my Atari stuff years ago. Perhaps someone who
worked at the Alien Group or knows someone who did will read this and knows
how the thing worked. I believe one of the pins on the SIO port was an
input pin that directed analog sounds directly to the TV, and the Voice Box
sent its output to that pin. In fact, I think some programs were written
to programmatically start and stop the tape cassette to play sounds,
providing in a crude way sounds to a program.

I suspect its because the "stored program" aspect w/ line numbers to asmed makes large programs clumsy and places effective limits on the source file size. Further, the screen only output of compile messages makes tracking down compile time bugs bothersome (plus you have to worry about saving your program before running, so as not to loose all your changes when you bomb page 0 with a runaway pointer). I think where asmed is particularly good is with small programs up to a couple thousand bytes- and as such, its a great learning tool. The listings are small, and having an IDE is really convienent. When you start needing searchable symbol listings, asmed comes up a bit short.

I do lots of embedded assembly now- including x86, but I remember the Atari assembly very fondly...(I still remember the rush I got when I finally figured out how to trap system reset...)

Good luck!

Gregm

I haven't tested that, but did you make an 80 column editor ? Or a program
to start before the main program for 80 columns ? If it's your code, then
I'd have to say I am pretty impressed by the speed.

KASM is probably better, but Ken, is it totally compatible ? Macros and all
? Maybe I should switch to it too! Thanks

Not at any time in the near future... Copyrights last a long time.
They're available for download in a number of FTP and web archives.

Never used it myself (Sorry), I would like to though.

I did see code printed, in magazines, looked straight forward enough.

I think "New Atari User" (a.k.a. Page 6) in the UK still have some PD disks
with lots of action programs on them, source and objects.

Really? I saw quite a few games written in Action. I think a guy called
"Stan Ockers" (apologees for the spelling) wrote a few games for the public
domain.

Actually, if he is only reading the Atari files, the head size should not
make a difference, as long as the program being used knows to step 2
tracks instead of one, to account for the fact that a 1.2meg 5.25" PC
floppy is an 80 track drive.

Now, if he were writing to the disk, getting a 360K floppy drive would
certainly be advisable.

Looks like this one needs to be added to the FAQ. <grin>

The JAM!! is a small purple/lilac colored box made by AIMS Labs that
allows an composite or S-video (chroma/luma) output device to connect to
and display on a standard VGA or SVGA monitor.

Although a pass-thru is provided to allow a PC to hook up to the same
monitor, a computer is NOT required for the JAM!! to function.

You should be able to find the JAM!! at Electronics Boutique, Best Buy,
and other stores.

I've been enjoying Atari800WIN immensely, but I'm having
a problem running .exe files such as necromancer.exe.gz
Having read through the readme.txt I've completely failed
to get any joy :)

Do I need a copy of DOS or anything else to boot if off a virutal HDD?

Thanks,

He was a member of the Eugene Oregon ACE a while back- I'd love to send him
a note sometime. Many of the programs he published there inspired a lot of
learning for me.

Your spelling is correct- he also wrote Action itself as I recall.

Nope, its a zipped file of sorts rather than a straight exe file. Use
winzip to unzip it 1st and then off you go..

Otherwise to run exe files read the faq bit that Rich wrote, very easy
to run exe files..

Hi Jon,
well if that 8bit software is pd or shareware, I'm surely interested...!
Please read the message about the "Pooldisk Too" cdrom project.

Regards,
Bo.
___ Blue Wave/386 v2.30

2516. Pooldisk TOO double cdrom

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-18 00:00:00 UTC
From: bo.schreurs@stackbbs.xs4all.nl
Message-ID: <906150775@stackbbs.xs4all.nl>
Source record: 59981

Hi Atarian,
we're about to release the "out of this world" experience of the year.
It's our upcoming POOLDISK TOO cdrom with mostly Atari 8bit stuff on it.
The release date is October 24th on the ABBUC's Jahres Haupt Versammlung (JHV)
in Herten in Germany.
So, you still have 1 month to contribute to this project if you want to.
Did you write a nifty Atari 8 bit program and want to put it in the
Public Domain, or is it shareware, send it to us, and we'll put it on the CD.
Besides helping the Atari 8bit community,
you get a nice backup of your software as well ;)

We're also interested in pd from Page 6. We miss a lot of disks there,
so if you've got a Page 6 pd disk, it would be nice if you could email
us a disk image of it.
The closing date of sending software to us will be October 21st, because
we will be burning disks on October 22nd and 23rd all day...
Besides software you can email nice pictures of Atari artifacts as well,
as long as it has to do with our beloved 8bit computer it's ok.
On the new Pooldisk, we've also included some internet homepages.
If you've got a nice homepage, send us the URL and we'll include it on our CD.
You probably guessed it, if you've got something interesting concerning
the Atari 8bit, and want to share it with the rest of the Atari community,
send it to us, and we'll put it on the CD.

The new POOLDISK cdrom will consist of 2 CD's.
It seems like one cdrom will only contain .ATR disk images (650 MB or so).
We removed the .XFD disk images because of the limit in disk space <grin>,
and one can transform an .ATR disk into a .XFD image using ATR2XFD anyway.
Some nice people and clubs already contributed to our new project, like
ABBUC, SCAT, BELLCOM (Bob Wooley), Thunderdome BBS, just to name a few.
The other cdrom will contain movies, internet homepages,
Atari 8bit pc programs, Mapping the Atari in electronic format,
pictures of covers, hardware and other Atari related stuff.
The double disk cdrom can be ordered through the ABBUC.
Prices and such will be announced on the Internet after the ABBUC's JHV
on October the 25th (all dates are in GMT).

Sincerely,
Bo and Ernest Schreurs

2517. APX software!!!

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-18 00:00:00 UTC
From: bo.schreurs@stackbbs.xs4all.nl
Message-ID: <906150776@stackbbs.xs4all.nl>
Source record: 59982

Hi again,
while I'm at it.
Can anyone tell me what the current status is of the APX programs?
APX = Atari Program eXchange.
Are the APX programs public domain now?
What I mean of course is, can we put it on our POOLDISK TOO cdrom? ;)
If so, I'll put up a list with the programs we have, and it would be
nice if people could send us the missing APX programs.
If it is still copyrighted, you can ignore this request.

Thank you for your attention,
Bo Schreurs

Very true, but to give him max flexability and minimum confusion I
suggested a 360KB drive. People can get things pretty confues when
they try to do conversions using a 1.2MB drive and older DD disks.
But of course you are correct.

>to start before the main program for 80 columns ? If it's your code, then
>I'd have to say I am pretty impressed by the speed.

>
I wrote KEDIT, KASM, and KLINK. KEDIT had a turbo 40 column handler, a fast flickerterm type 80 column handler, and a fast graphics 8 type 80 column handler.
KLINK is used for KASM's optional "relative" mode which creates relative object
modules that must be linked and is completely compatable with CC65 assembler and
linker. KCC was never finished or released.

>KASM is probably better, but Ken, is it totally compatible ? Macros and all
>? Maybe I should switch to it too! Thanks

The only difference in macros are parameters are passed as text and substituted
directly for the %1's (like #define's in C) instead of evaluated and passed. This
normally shouldn't make a difference and is more powerful since you could pass
about anything to a macro. Both Atari Macro Assembler and Mac65 syntax is supported.

About the only commands not implemented are VFD, USE, LINK, and a few of the listing
options.

Despite what any of the documentation says they are now all freeware and not shareware.

They do the same thing. The new windows version of APE wil require a
modified version of the interface, but they both are compatible.

> What about the APE PRO cable??

Does the reverse of the APE interface, it lets your PC talk to peripherals.

"Something for the weekend?"

For those within travelling distance of the middle of England who fancy a good day out this Sunday, just a quick reminder that the Amstrad CPC users' club called "WACCI" are holding their annual "get-together" from 10am-4pm at the Bescott Football Stadium in Walsall, West Midlands, UK. Just off the M6.

Consider yourself invited.

It will only cost you 2 pounds each (there *had* to be a catch - it's towards the hire of the Director's
suite) and *any* 8-bit computer type is welcome. Just bring an extension lead and an adapter or two and you can plug in and play.

The group are not particularly partisan, and there is the opportunity of buying & selling second-hand computer kit and accessories without having to book (or pay for) a table.

Other attractions include a bar and a Sunday Market outside if you get bored!

E-mail me on Saturday at brian@spheroid.demon.co.uk for further details.

2527. 1450XLD drive question

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-19 00:00:00 UTC
From: marknewtonjohn@webtv.net
Message-ID: <6955-36036A1E-17@newsd-198.iap.bryant.webtv.net>
Source record: 59895

Is there anyone here with an XLD that can answer my question?

That is, does the XLD double-sided drive address the first side as D1:, and the other side as D2:?

I ask this as I found my DOS 3 introduction, and it stated the above.

So does that also mean that if you use a DOS 2-type format, it still only formats one side of the disk? Would a DOS 2-type DOS even know that the other side is D2:, or would you have to flip the disk, or does it treat a separate disk drive, like an 850/1050 etc. as D2:?

I know this may seem trivial, but it is an interesting technical question for a rather rare computer and drive, not to mention the use of DOS 3.

2528. A simple answer about color

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-19 00:00:00 UTC
From: marknewtonjohn@webtv.net
Message-ID: <6956-3603680A-2@newsd-198.iap.bryant.webtv.net>
Source record: 59896

Without going blah blah about DLIs, mixing graphic modes, blah blah blah, for the most part, on an 8-bit you have four colors to work with. (At the same time)

With the ST in low-res, you have 16; medium-res, four. (At the same time) And of course, hi-res is only two, black and white.

I believe the original post was asking how many colrs can be displayed at one time, rather than the palette, or even how many shades of colors one could do with programming tricks.

2529. Just a quick thanks..

2535. 850 - pc

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-19 00:00:00 UTC
From: "Stephen M. Stephens" <sstephens@AMERITECH.NET>
Message-ID: <3604515F.E68C0F0C@AMERITECH.NET>
Source record: 59903

Transferring files between a pc and my 800xl has be successful via a modem and a friend with 2 phone lines one calls the other. I have an 850 and a (pc) null modem cable (works great for duke nukem). When I try to use w95's direct connect feature with the 850 (on serial port 1 and using bobterm) I can't get the two pc's to connect. I've also tried ports 2,3,4 but with no luck. I've also tried this in dos with Telix, but with the same result. Can anybody send me some tips for doing this (pinouts for the cable, baud rate etc.)

Thanks!

(This will beat packing my system up and taking it to his house for slow transfers - although playing galaxian afterwards on a 46" tv is killer!)

> with the Assembler Editor and 64K or 128K?

I recall trying to write a large project with the Assembler/Editor cart, and it
just gotproblematic as it grew.

First, the entire source had trouble fitting in memory. And when I split it up
into smaller
source files, the load/assemble process was so slow (the files get read from disk
a line
at a time, or something like that) that I usually set things so I could go and
have lunch
during assembly. It was that slow.

John Harris' MAE (Macro Assembler/Editor) was my tool of choice when writing
Ice-T,
my 80-column terminal emulator. I liked it so much, in fact, that I contributed
to it and
created fast 64-column and 80-column text "drivers" that John incorporated into
the
program. It's very powerful and fast, and really makes assembly programming a
pleasure.

Yes, run a terminal program on the PC side which can use a comm port
directly. This would include DOS based terms, or a Win95 one such
QModem 95 can do it too. Then run Bobterm on the XL. Set for 9600bps
on both sides, N 8 1. Use a null modem adapter. I don't want to dig
for the pinouts right now, but I'm sure you can buy one or find the
pinouts easy enough. Use YMODEM batch transfer between the systems.
Works great for me except I use a Black Box and use 19.2Kbps.

2539. JAM!! + XEP80

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-20 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19980920082353.17115.00002086@ng112.aol.com>
Source record: 59907

I dug the XEP80 out of the garage and tested it. Long story short - it works with the composite input to the JAM!!, but not especially well. (Sort of like the
XEP80 has always worked for me!) Since on my hardware, the JAM!! underscans the screen, and the XEP80 overscans the screen, that part balanced out very well. The display filled the whole screen, but did not overscan the edges. It took a very little centering to get the display right where it should be. The display comes out medium-gray with white text. Unlike using the XEP80 with a composite monitor which produces thin letters, the JAM!! displays the letters as very wide.
(Scan-doubled = double-wide letters?) The text was very legible, but had a lot of shadowing with artifacting in pink & green in the shadows. Also lots of RFI.
All in all, not pretty. Tried hooking up to the S-video, but it would not work at all.
The champion display for the XEP80 is still clearly (no pun intended) the TTL mod
from Bob Woolley. If someone else tries this, I'd be interested in their results, and perhaps someone has an idea how to get the S-video to work or clean up the shadowing and RFI?
Larry White

2540. Atari Metal (in northern California)

2541. For Sale: SupraModem 2400 + cable

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-20 00:00:00 UTC
From: Itay <itayc@hotspam.com>
Message-ID: <3604FAE0.F09EE1C0@hotspam.com>
Source record: 59909

FOR SALE:

SupraModem external 2400 baud modem, in perfect working order, including docs.

Compact size. Includes custom-built cable to attach to Atari 850 interface or, alternatively,
a cable to attach to the PC end of an Sio2PC / APE cable.

(If that doesn't seem to make sense, it looks like this:

Atari - <--APE/Sio2PC cable--> - <--My cable--> - Modem

and it works just fine if you load the R-Verter R: handler, and doesn't need any kind of interface.)

Used with my Ice-T terminal emulator it can turn your 8-bit into a rather fast and convenient
terminal for email, BBS, textual web-surfing, downloading, etc.

The modem needs 9VAC, and therefore will work with any Atari standard power supply. I can
throw one of these in, but it's heavy and will make postage really expensive. I am located in Israel.

$40 or best offer.. Shipping will be approx. $10 extra, Airmail to anywhere in the world.

Following on from today's get-together in Walsall, central England, the Amstrad CPC user group WACCI are considering sponsoring (ie underwriting) a get-together for users of *all* 8-bit formats at around this time next year.

Facilities suggested to be included: bring and buy, demonstrations, emulators running, chat area, etc. But still very open to suggestions, really....

Early thoughts are that it wouldn't be an "Amstrads+others" event, but rather a completely open 8-bit event that they just happen to be sponsoring. And no big banners all over the place proclaiming their sponsorship, either...

:-)

Suggestions and comments are invited from any user of any relevant computer type on whether this is worth doing, and how it might be done to encourage success.

Perhaps entrance fees for visitors should be kept to a minimum, and the stall fees should be really cheap to encourage attendance?

Suggestions and comment can be sent to WACCI's publicity officer, Brian Watson at brian@spheroid.demon.co.uk

It has absolutely nothing to do with the Atari.

It's a combination 30fps video capture/SCSI adapter used to capture
movies, edit & spit it back out as video.

As soon as I figure out how to mock-up a PCI-bus interface for my 800XL,
well...

Okay. The final (at least my) word on Action! vs. Assembly. Verdict:
Use Action! ALWAYS unless one of the fgollowing limitations apply:

1) You need absolutely the very fastest code possible. Action!
compiles to very fast and efficient machine code, but, assmebly will
always allow a bit extra performance if hand optimized by a skilled
assembly programmer. In almost all cases, Action! is more than
adequately fast.

2) You need the tightest smallest amount of code. Action does a
decent job, but a skillful assembly programmer can gain further
ground. (given enough extra man hours and putzing around).

3) You need floting point support. While the Action! toolkit does
offer a floting point package, it is in some ways limited and can be
awkward to use well. It should be noted that with this package it is
still easier to use than doing it in assembly.

Action allows for "code blocks" which are basically a way of inserting
raw object code into an Action! program. This should satisy most of
the few instances where the speed or compactness of assembly is
required. One could write the majority of the app in Action!, while
sticking in that routine or two that just must be hand tuned assembly.

Assembly has a 1 for 1 relationship to machine code, and so will always be the most capable language, but will also be the most difficult and time consuming to develop with.

I must take a minor issue here. While Hometerm was popular, Amodem
and in particular Kieth Ledbetter's term program (damn the name just
slipped my mind, it was HUGELY popular) were the most popular until
Bob Puff gave us BobTerm.

>But then, I think you have pointed out there is a cultural difference

Sc> Is the original Pool disk still available, or is this new disk an
Sc> upgrade that includes the stuff from the original disk?
Sc> Michael Schoedel, Atari Nut!

Hi,
well to be honest, there are, but we're not selling them anymore.
Within a month we're releasing the "updated" Pooldisk, version two, eh TOO.
So, if I were you I'll wait. Unless you're really anxious of course... :P

The Pooldisk Too includes the stuff from the original pooldisk.
However, all images are in the JPG format now. PCX's takes up to much space.
If someone knows a good JPG viewer for the Atari ST, let me know (url).
The hard section has some new pictures, we've includes a load of cover
images, commercial images, internet homepages, movies, newsgroup news
in QWK format, some nice PC, MAC and Atari ST utilies related to our 8bit,
and a lot of other stuff.
This disk can be nice resource to create your own homepage ;)

The other disk consist completely out of .ATR disk images. We've dropped
the .XFD format, but with ATR2XFD you can create XFD images anyway.
Some nice people have send us additional PD software and we were able to
collect some of that too, and that has been included on the disk as well...
It looks like that cd will be completely filled with .ATR disk images...
Nice.

Until october 21st you still have time to email us a nice public domain
or shareware program, which will be included on the pooldisk too.
If you have a nice picture of something related to our 8bit Atari, i.e.
a pin, a mug, a tie, flyer, software cover or 8bit hardware, please email it!
The scan should be in 16M color, 200 dpi. We love to see it. :)
Let me mention Pacman or Asteroids...

Thank you.
Bo Schreurs

Source record: 59928

Dear Mr Hawk

I was just saying a few games WERE written in "Action!", (I guess a few utilities were as well?). I have seen one or two games written in assembly that were "not so impressive", (in my opinion anyway).

You just said "Action! can't do the stuff you do in assembly. Unless you code all the routines in data statements or something...". No mention of demo's, till this point. Again I just said some game were written.

People can go look up Stan's work and judge for themselves. Side tracking for a miunute, One of my favorite games on the 8 bit was called "Pogo Joe", I have yet to find any one else who liked it. This won't spoil my enjoyment though. Different people like different things.

As the people who started these threads were (or seemed to be) starting, to program the Atari 8bit. I wouldn't have thourgth "hard core" demo writing would be a serious issue? may be I'm wrong?

As NEITHER of us programmed in "Action!", I don't think WE are in a position to discuss the various merits/demerits of the language.

PLEASE don't let this become a shouting match along the line's; my language is better than yours. No language is ALL purpose, in the computing or real life worlds.

Sorry if I offended your views on programming languages. I do agree assembly language is usefull very experience, but so is trying out other languages. They all have somthing to offer someone.

Take care,

David

I agree with that, but still think the speed of compiled Action! can't
compete with assembly.

> You just said "Action! can't do the stuff you do in assembly. Unless you
> code all the routines in data statements or something...". No mention of
> demo's, till this point. Again I just said some game were written.

Sure! I was a bit unclear! Sorry for that! Still if you plan on doing
something that moves well and is fast and furious, stick with learning
assembly.

> People can go look up Stan's work and judge for themselves. Side
tracking
> for a miunute, One of my favorite games on the 8 bit was called "Pogo
Joe",
> I have yet to find any one else who liked it. This won't spoil my

I actually agree with you there! I like Pogo Joe a lot and do you think
it's possible to do it in Action! ? It might, since not much is happening
apart from Joe hopping around and a few other characters. Do Dropzone,
Ballblazer or Rescue on Fractalus in Action! and I believe you!

> As the people who started these threads were (or seemed to be) starting,

I thought most people started coding demos. That was my impression, but I
might be wrong and people in the US might not be of the same opinion as
Polish, Swedish, Norwegians (which I am) and Slovakian and whatever.

> As NEITHER of us programmed in "Action!", I don't think WE are in a
> position to discuss the various merits/demerits of the language.

Agree, but I am just talking general. Compiling languages like C, Pascal
and Basic are not 100% speed.

> PLEASE don't let this become a shouting match along the line's; my
language
> is better than yours. No language is ALL purpose, in the computing or
real

> life worlds.

I do see your point, and agree with the statement you make. I am just saying if speed is important, assembly. Of course it might be easier to program for a newbie in basic, but the guys starting this post was referring to assembly, I believe!

Action! is about 70% of the speed of assembly language, it generates fairly good code. It also has the best interface to assembly language I have seen in any language. Unfortunately, the details on interfacing to assembly are sparse & have at least one error in the manual. Except for a few people, it seems people don't write their own assembly routines for Action!. More of a curiosity then a point, but at one time when I was doing a lot of Action! programming I wrote utilities to convert my ml routines into code blocks & would disassemble my compiled programs to optimize them. Maybe a better example of things programmed in Action! would be Batteries Included 3 in 1 Home Pak combining word processor, data base, & terminal program. Same author, Russ Wetmore<?> also did the game Preppie & Food Fight I think. XE term was just a clone he wrote for his stand alone full featured terminal program. Prior to Bobterm, it is safe to say the most popular terminal programs for the Atari were pretty much all from Russ & all written in Action!.
But then, I think you have pointed out there is a cultural difference here, kind of like the difference between going for the land speed record & owning a utility truck. This side of the pond we kind of lean to the utility vehicle vs the land speed record.

I gutted a PC serial mouse and connected the trackball sensors to the
respective pins of the mousechip on the PCB. It kind of works - If I move the
trackball too fast the mouse cursor won't move, so I guess I need to have a
second look at that (That way you can even use the second trackball button).
Anyway, it's nice to play MAME games like Crystal Castles, Centipede or
Missile Command with the Atari Trackball :)

>
> --Kevin Savetz

Kevin,

I don't remember too too much about the original
Atari Assembler Editor Cart except that it was _really_ slow!
I do remember some mention of that blurb in the manual!
To be fair, though, very early versions of Mac/65 were built
with the Atari Assembler Editor Cart!
If you could get a copy of Mac/65, that would suit
you well as it's faster and was used to (later) build itself.
Mac/65 also built Basic XL, Basic XE, and some other OSS
products at the time.
Somewhat off-topic, but what a complex build
Basic XE was! The source took 3 floppies; two PERCOM
double-density, and a single single density floppy - all
mostly full! Mac/65 just churned away until it was done!

With a few isolated exceptions, I believe the APX stuff has not been released by Atari into the public domain. Some years ago B&C ComputerVisions bought up the remaining stock from Atari and has been selling it ever since. They probably still have a number of APX titles in stock.

I don't remember offhand what the pinouts for the 850 interface are, but
they are the same as for the ICD P:R: Connection, and they are *NOT THE SAME*
as the standard 9-pin connections as normal (PC) RS232, even though they
use the same size connector. I think that the pinouts are in the FAQ for
this newsgroup.

It would have been so much easier had Atari used the standard pinouts in the
first place.

Actually, I think the 850 predated the IBM PC. It would have been so much
easier had IBM used the standard pinouts in the first place.

RS232 connector pinouts for the 850 are listed in the Atari FAQ at:

www.faqs.org/faqs/atari-8-bit/faq/

I'm just starting out in assembly....trying to get through the
"Machine Language for Beginners" book.

Anyway,

```
LDA #101
STA (88),y
```

(who cares what y is, it's usually zero, I just want to stick the
accumulator in the display memory)

Above will make a lowercase e(dec 101), just as I expect it should.

```
LDA #69
STA (88),Y
```

This will put the control-e graphics character on the screen, when I
expect it to put the uppercase E on the screen.

What is going on? I'm using the standard ATASCI decimal
numbers.....This happens even when I use hex numbers as the argument.

I'm using the Atari Asem/Edit cart, starting at $0600

Thanks
Eric

There is that Revision C Converter listing in Antic that you could use.

When I wrote a small telephone #/address program, I would usually just use LIST/ENTER when saving to disk (while writing it) and I'm pretty sure that solves that extra byte problem.

I for one care. He's a scumbag. It is my view that more people
should care. It is also debatable about what kind of job he's doing.
Missle technology and more to China for campain money doesn't sound
like a good job to me. That isn't proven in any court, but then when
it comes to supporting or not supporting a political candidate one
doesn't need to have DNA evidence. I say where there's smoke, there's
probably fire, and this guy has worn out any benefit of the doubt in
my book.

>numbers..... ...

Very good question. The problem is that you're using the standard
ATASCII decimal numbers, but...that's not what the machine is
expecting to find in screen memory.

Here's the mapping from ATASCII to screen memory:

```
ATASCII: screen:
------- ------
0-31 64-95
32-95 0-63
96-127 96-127
```

So, as you noticed, lowercase 'e' (dec 101) maps directly to
screen memory. But uppercase 'E' (dec 69) is in the range
32-95, so you have to store 69-32+0 or 37 into screen memory
to get your 'E'. If you store a 69, it's in the range 64-95,
so (mapping back to ATASCII) you get 69-64+0 or 5, which is
the CTRL-E symbol.

I have not looked this up to verify it, but I believe when you write
directly to screen RAM on the Atari, you need to use the 'internal'
arranged ATASCII. The codes are listed in the back of Mapping.

You would need to attach it to the parallel port and write a port VxD to
control it, assuming you are talking about windows9x.

Antic distributed APX for some time, as I recall. I wonder if they licensed it from Atari, or if or if Atari returned the rights to the individual authors when they folded the APX operation? If someone wanted to get the rights or a license, that would be good to know.

Okay, lets treat Clinton like any other citizen:

There's no way a private citizen would have been subjected to four years of this kind of taxpayer funded crap. District attorney's offices don't have $40 million to spend on finding out if Greg Miller's got a dish on the side. Nor do they have any inclination to pursue the question.

The obvious truth of the matter is that it's been a political witch-hunt from the time the original SP was canned to make way for the more "accomodating" Starr, to the final public release of 4,000 pages of porn--4,000 pages that of course make no significant mention of the issues that Starr was actually hired to look at. With $40 million at stake, Starr had to come up with something to save his career, and this is the best he could do?

You're living in a dream-world if you think this sort of thing happens to any private citizen. And if you honestly DO think it happens all the time, I don't think you should be celebrating that sad state of affairs... I know I don't want the vice squad following me around for four days, much less four years. How 'bout you?

>If you commit perjury, you go to jail... Is the President of the United
>States above the law? Food for thought.

Cotton candy for thought, more likely. Light, fluffy, and without
nutritious value.

Excellent idea, would be a really good way of finding those long lost
and un-obtainable bits of software and hardware for whatever computer.

Maybe one day I will find Manic Miner for my CPC6128 that actually
works! All I ever get is Willy jumping constantly on the first screen!

Thurstan.

About 7,8 years ago i saw a film on TV that was about a boy finding secret documentation in a Atari Game Cartridge.
The documentation was shown when you got a certain high-score.

Who knowns what film it was?

And were there more movies or programs that was sponsored by Atari?

Louis

Probably "850 Express"
> were the most popular until
> Bob Puff gave us BobTerm.
No. We are talking about several different time periods I think. Amodem
fell into disuse as 1200-2400 baud modems came into use & Bobterm didn't
really take off until about 1988 IIRC. Express didn't come into wide
spread use until it became distributed with the PR:Connection. There was
a compiled version of Amodem around that was very nice, but it wasn't
that popular. Maybe a 2 year gap in there. Anyway, so many people in the
CIS Atari forem were asking for Home Pak hacks to speed it up or using
XE term which was distributed with the XE modem <301?> that I feel
comfortable with my statement. But then now that I think about it I am
not sure if XE Term was written by Wetmore or Ledbetter or if Ledbetter
ever wrote in Action!<sigh>, 14 years ago! Does remind me of something
else, not sure, but I think BBCS was written in Action! too.

No, that was directed at Hawk, from Norway. I am a native son of a
native son. I don't really care for demos. The point I am trying to make

there is we have a tendancy to hold people like [Wetmore, Ledbetter, Puff] in higher regard then any demo writer. Not that the demo writers aren't talented, just that we generally don't care.

You need a hardware hack. Again, foggy memory but I think the RVerter
did just that. I saw one design based on the MAX232 chip that was a
reverse engineering attempt that was supposed to work with the RVerter
handler. The design could be converted to use the 1489 chip for
cost/availability, but not that many people are interested in hacks
anymore. It would cost you about $4 to build one if you had a sio cable.

Cloak and Dagger

> And were there more movies or programs that was sponsored by Atari?

Sponsored ? Don't know, but D.A.R.Y.L., T2, Driving Academy, The Last
Starfighter amongst more, had Atari's in them. Oh, and one of my faves,
Blade Runner!

>

I didn't work for Alien Group, but I do have a Voicebox. I just opened it
up to look at
it's insides. It basicly consists of a single SIO cable, a volume control,
and a circuit board.
```

On the circuit board is a Votrax SC01 voice synthesizer. Along with the SC01 are three
(what I believe) are 74 series TTL chips. Unforunately, Alien Group scratch the part numbers
off of them. Along with the chips there are about 20 resistors, 6 capicators, 1 transistor, and
4 diodes.

I don't recall if the SC01 used a serial-in or parallel-in for the phoentic data from the computer.
Of course in this design the Alien Group did, they're using the SIO port. But are they using
a serial-parallel circuit and how are they handling the SIO port ID information?

I guess the hard part for some to do is to emulate the SC01 chip.

Source record: 59873

That is a very good question. I have a 1450XLD with two drives. But it's
been years since I last fired it up.
Right now, I have to fix the keyboard cable. Cheap flexprint has gotton so
bad that the flex print has seperated.
If and when I get it back up and running, I'll do a test and see what
happens.

I do know this, Spartados doesn't work well with the 1450XLD. As soon as
Sparta loads in it's own D: handler, it
completely by-passes the parallel bus handler and the drives stop working.
I guess someday a special 1450XLD version
of Spartados will need to be made.

Also, too bad the format of the SYS files for Sparta X were never released.
It would be nice to make additions and/or
updates to some of the stuff on that cartridge.

Use the R-Verter driver with the following piece of hardware:

From: cp576@cleveland.Freenet.Edu (Kenneth L Siders)
Newsgroups: comp.sys.atari.8bit
Subject: RVerter Type Interface (Instructions)
Date: 21 Jan 1995 09:21:28 GMT
Lines: 190

How to build a serial interface (up to 19200 baud).

The following is the description of how to build an RVerter compat
interface. I have never actually seen one so I derived most
of this from tracing the connections inside an SX212 modem to
determine what pins on the SIO interface corresponds to which
on the RS232 connection(except the data lines which are obvious).
This interface should work with any RVERTER(or BOBVERTER)handler.
It may work with SX212 handlers or software but may not support
all of the baud rates. Handlers are available alone and with
some terminal programs like Bobterm.
I am not sure if all handlers support 19200 baud, but I have
used my interface connected via a null modem cable to an IBM to
transfer files at 19200 baud and have had no problems. I tried
38400 baud (by patching the handler) and too many errors were
generated. I also connected by SX212 to the interface instead
of the SIO connection and had no problems. I actually built this
by lightly super gluing the two ICS into a large DB9 hood and
soldered the connections. I don't recommend this approach unless
you are totally nuts. I would NEVER try that again even though
it did work (after fixing a couple mistakes). I planned on
eventually filling it with EPOXY but I didn't and pray nothing
ever comes loose. The cable I build has an SIO cable (from my
fried XM301 modem, and the interface build in the other end with
a DB9 male connector. I was able to use a ready made IBM cable
to connect to the modem. I also build a null modem cable and
gender changer. This interface is unable to communicate at the
same time as other I/O is occurring. This is typical unless
you have an interface that connects to the XL/XE parallel bus.
Note: CTS is not supported so you cannot use RTS/CTS handshaking.
Only XON/XOFF could be used. When transfering files between

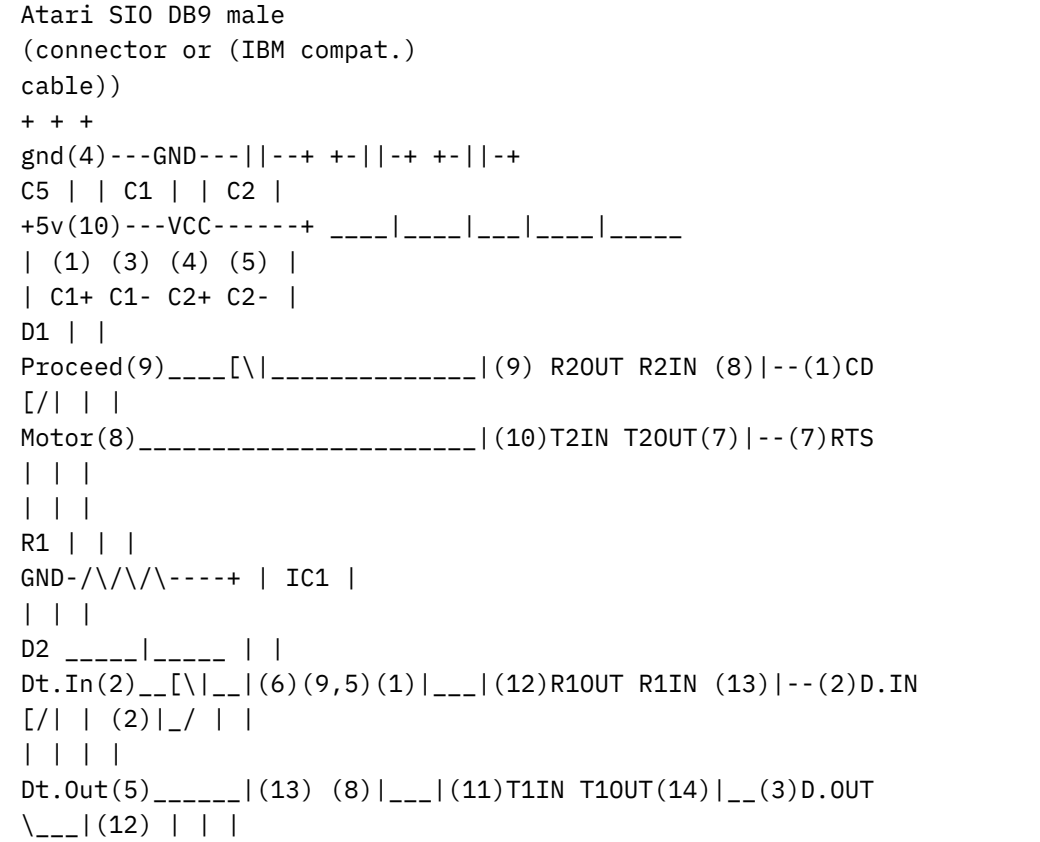
computers, if you use a protocol this will not cause a problem.
No reponsibility is assumed for any damages resulting from
the building or using of this interface.

Parts:

IC1 MAX232/ICL232 RS232 Level Converter with onboard
+10V/-10V voltage generator.
IC2 74LS00 Quad NAND Gate. Used to disconnect Data Lines
when DTR is not asserted.
R1 1K resistor 1/4W
R2 4K resistor 1/4W (3K to 7K should be OK)
C1,C2 4.7uF capacitor
C3,C4,C5 10uF capacitor
D1,D2,D3 IN4148 or IN914A or similiar diodes
ZD1 IN4733 5.1V Zener Diode or IN4734 5.6V Zener Diode

I don't have a data sheet for MAX232 and are giving the values for
the capacitors from another circuit. I used 33uF caps for all of them
(I have a lot of them I got cheap) and have had no problems. Place
them as close to IC1 as possible. They should probably be 12 to 16
volt types or better especially C3 and C4 which see around 10 volts,
where the other three only see 5V.

ASCII Circuit Diagram



```
| | | |
__|(3) IC2 | | V+ 5V gnd v- |
\_|(4) | |_(2)_(16)_(15)_(6)____|
| | | | | |
GND---|(7) | +-||-+ |-||-+--------(4)DTR
| (10)|__ +C3 |+C4
VCC---|(14) (11)|_/ | GND---(5)GND
|___________| GND

(no connection) NC----(6)DSR
NC----(8)CTS
```

Optional (Only needed to be able to detect ring signal from Modem): This is not tested, Hopefully it does not need to be inverted. You could probably use a 1489 if you know how.

```
D3 R2
Interupt(13)____________[\|_____________________/\/\/\____(9)RI
[/| |
ZD1 |
GND__________[\7_|
[/L
```

Be sure to note polarity of capacitors. Note: The positive lead of C4 does go to ground since the other leg will be a negative voltage. + and / \ are use to show connections and bring connections together on the diagram. Sorry not to break the ICs down into parts but that would have made the diagram worse.

Pins for RS232 are for a 9 pin connector. With this connector you can connect a standard 9 to 25 pin cable to this connector to use a modem, or a null modem cable to transfer files. You can substitute a 25 pin connector using table below. If you plan on only using it for file transfers you can wire in the null modem cable before the jack. Note: The 9 pin connections are not the same as the 850 interface but are the same as used sometimes on IBM type computers. Change the gender of the plug as desired.

9 Pin	25 Pin
1	8
2	3
3	2
4	20
5	7
6	6
7	4
8	5
9	22

RS232 Definitions:

CD=Carrier Detect (inp) DTR=Data Terminal Ready (out)
D.IN=Data In(inp) D.OUT=Data Out (out)
DSR=Data Set Ready (inp) CTS=Clear to Send(inp)
RI=Ring Indicator (inp)

Null Modem connections

This is for 9 pin connectors, if a 25 pin connector is used
use chart earlier to convert.
Connect pin 5 straight through.
cross in one end of the cable 2 with 3 and 7 with 8.
connect 1,4, and 6 in each end of the cable.

If you are only using the interface for computer to computer
transfers, you can build this into the interface if you are
careful. Connect what would go to pin 3 to pin 2. Connect what
would go to pin 3 to pin 2. Connect what would go to pin 8
to pin 7. Connect 1,4,6 together on the connector. Connect what
would go to pins 1 and 4 together. Connect pin 5 normally.

Parts Sources

Resistors, capacitors, diodes should be available from Radio
Shack (not sure about the zener diode if you need it). The
DB9/DB25 connectors and hoods should also be available there.
Atari SIO cables are available from one of the Atari Dealers -
just remove one end. You may also want to pick up a prototyping
board at Radio shack to build it on.
I got the MAX232 for $1.65 and 74LS00 for 22 cents at BG Micro.
(US$ only,$10 minimum order on credit cards) $3.25 minimum shipping
($7.50 Canada, $15 others, no shipping to Mexico or Puerto Rico).
You could also get IN4148 diodes at 100/2.50. Other items that
you could get to pad an order if you need them:
14 pin socket 13/1.00 (only need 1),16 pin sockes 13/1.00
(only need 1), 6821 PIA $2.00 (same as 6520?), 6810 (used in
1050) $1.25, 2793 (Controller used in 1050) $7.50, 4164-150ns RAMS
at $0.49 or 9/3.50, 41256-150ns RAMs at $1.25 or 9/9.95 (256Kx1),
62256 32x8 SRAM $5.00 (can this upgrade the Black Box as
described in the last issue of the original A.C.?) Orders 1-800-
276-2206, Tech suport 214-271-9834, Fax 214-271-2462. P.O.
Box 280298 Dallas, TX 75228. This along with a couple other
places was listed in one of the original A.C. issues.

You should also consider MAE. This assembler was recently updated by John Harris. The man
who brought us classics like Frogger and Jawbreaker and who is featured in the book Hackers by
Steve Levey.

MAE is available on the University of Michigan FTP site. It includes nicely written documentation.

Also, there is a disk version of MAC/65 available on the Michigan site (I believe). But I don't know of any
documentation available on the web for it.

You might want to check with B&C Computervisions and see if the have any copies still available.
Their address is HTTP://www.myatari.com/

Good Luck,
Glenn Bruner

2608. Connecting Atari and PC via COM/Joy ports

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-22 00:00:00 UTC
From: Graeme Fenwick <gfenwick@BYESPAMprimex.co.uk>
Message-ID: <36081420.0@scooby.nildram.co.uk>
Source record: 59876

If the COM ports on the PC are the same shape as the joystick port on the Atari, does this mean that with a female-female joystick lead and suitable software on both machines it should be possible to transfer data between the two (albeit pretty slowly)?

Atari provided the computer game graphics for SUPERMAN III (complete with sound effects from the awful 2600 version of Pac-Man). There was supposed to have been a tie-in; I remember that a game cart was advertised, but I never saw it anywhere.

Someone mentioned BLADE RUNNER (Atari's logo is noticeable in one of the city scenes), but this was probably due to the fact that Atari was owned by Warner Communications at the time, which also owned Warner Bros., the distributor of the film.

This is also a bit indirect, but Atari computers were used to design some of the sound effects used in TRON. And even more indirect, but sort of cool, is that an Atari computer (Portfolio, if I remember right) was used to help save the world in TERMINATOR 2.

An Atari 400 is visible in FRIGHT NIGHT (I think the film was released by Warner Bros.?). But that was more of a product placement than anything else.

Another embarassingly poor hack, but yes. I had one of the old Joystick
modems & got a good look at how they did it. Posted the hack around a
few places, allowed you to use the Express MMP software to hook to
either a hayes modem or PC. The handshaking for terminal software
limited the thing to 300 baud when functioning as a terminal, but I did
have more then a few 19,200 baud transfers from the Atari to the PC that
went well. Fastest I ever tried from PC to joystick with one way
transfers was 1200 baud. Really ugly hack, but it works, just takes a
resistor, a diode, & a 9 pin connection for the Atari side & a 9 or 25
pin connector for the PC. Joysticks are really noisy for binary
transfers, but with the center sampling of RS232 they work fine.

2612. Re: Connecting Atari and PC via COM/Joy ports

Source record: 59880

Same shape<>same function. The Atari 9-pin port is half a parallel port (with a couple of pots thrown in). The PC 9-pin port is a serial port. It is possible to do a serial transfer by the joystick port - witness the Supra 300AT mode that ran at 300 baud through the joystick port. There's also a joystick port network available from UMich; it's impractical for more than two computers unless you're using a 400 or 800, since you need an "in" port and an "out" port. But the only standard port on the Atari is its joystick port, used on the ST, AMiga, C64 and Atari 2600. It isn't a COM: port.

With custom software on both ends and a custom cable you could (probably) transfer software via a joystick port. But it would be faster to use a SIO to RS232 adapter cable (I just posted plans that Keith Siders did up in 1995) and term programs at both ends.

David Paterson

BLADE RUNNER is notorious for the kiss of death it gave to virtually every company featured on its electronic billboards. Coca-Cola is still around, but Atari and many others have all gone belly up since it was filmed.

Without any "tricks," using Graphics modes directly supported by the OS:
16 is the max (at 80x192 pixels). (You realize of course this is an OS
limitation, not a hardware limitation.)

That is so easy! The Movie is Cloak And Dagger, featuring the 7800
game, starring a young Henry Thomas (ET) and the "secret" was
something related to the plot of the movie, not in real life! if a got
something like 7 million then the secret US gov't plans would be
revealed! Nice movie too! Can everyone name all of the 8bit stuff
featured in the movie?? ;)

There was a film in the early mid eighties called (I think) prime Risk. It featured a girl hacker who used an Atari 800 & 810 (very visibly used with *real* screenshots as I remember) to hack systems. She discovers a world wide plot to bankrupt the US by shutting down its entire banking/finance infrastsructure. Nice race against time ending as they tried to work out where the last bomb was that was going to blow the networking up.

I really loved the film because of the cute female hacker, loads of Atari bits and a good plot too. Mind you, I'm older & wiser now and might find its crap if Iever see it again!

Actually, the Antic Sound Processor is based on Cheap Talk. So, the info from that project would also be useful. Once I get the ASP article scanned (tonight (HOPEFULLY)), I'll e-mail it to those folks that asked for it then post it, and the Antic v8 n8 ASP files on an ARC file to the Umich Atari site.

It is probably possible. I think it has been done.
The old MPP modems attached to the joystick port. And
I think Bob Puff made a driver for the sx212 or something
to go in the joystick port. The thing is, why re-invent the
wheel? Use a sio2pc/ape cable instead, with APE or
sio2pc software.
Russ

Sure, build an SIO2PC type interface and load the R:Verter driver to use
the modem. The R:Verter was pretty much exactly the same device as the SIO2PC
cable, less one line.

You're right. The 7800 was only a twinkle in Atari's eye at that point. It
didn't come out until the late eighties. It most definitely was a 5200.

Cheap Talk was in ANALOG, built around a chip from Radio Shack and
interfaced by a parallel hack through the PIA (joystick).

The Antic Sound Processor was based on Parrot and other digitizers, and used
the POT line to sample sounds and replay them through POKEY, using the
"forced" volume mode.

Two very different projects.

There have been posts before about the
Adventure Intl and Infocom games, and
there are apparently PC programs for each
of these groups that will allow you to use the
data files for the individual games. Has anyone
done this? If so, can they explain exactly what
steps one has to go through to
do it? I looked at a site where the AI games
are archived, and there were a bunch of
diferent files, without much description as to
what did what. ???

You should be careful in trying to just connect a joystick/SIO port and a
PC serial port.
These ports operate on different types of interface specifications. The
joystick/SIO ports
operate on +5VDC and ground potentials. The RS232 specification (a PC
serial port) operates
on a -15VDC and ground potentials. Wiring these ports together directly
without using
IC chips to "translate" these voltages, your going to burn something up.

Your best best is to build a SIO2PC cable and use APE.

Like someone said, why re-invent the wheel.

Sorry to correct you on this, but it was a 5200. At that time, the 7800
was
still just a product prototype.

>Can everyone name all of the 8bit stuff
> featured in the movie?? ;)
>

Cloak and Dagger and Tempest for the 5200 and 2600 were show cased
on the store shelf in the movie. The 5200 games had the offical blue
labeling
and the 2600 games had the offical red labeling.

The Cloak and Dagger game footage was the running on an actual arcade
unit with a behind the scenes game player playing the game for Henry.

Too bad Cloak and Dagger was never completed for the 5200. I think the
programmer only got about half way done on the game.

We have all probably at least heard of an SIO2PC type cable by now or
APE cable, is this cable you have the same or different? Also, how
does one get a R handler to work with a modem (or null modem) hooked
up via SIO port? I have an SX212 which has both a DB25 serial port,
and an SIO port. My BB has a 19.2Kbps serial port, but it would be
evcen better to get faster still directly throgh the SIO port. How
to?

>would happen?
>
They wouldn't--if you had any kind of lawyer at all, you'd have taken the
5th; a legal protection which was denied Clinton.

On the other hand, if they caught you being -evasive- in answering a line of
questioning that was later found to be inadmissable, in a civil lawsuit that
was thrown out of court, the plaintiff's attorney could very well make the
"cut your knife" gesture in your direction.

>> I don't want the vice squad following me around for four days, much less
>> four years. How 'bout you?
>
>Certainly not, I'd prefer to be immune to the law.

That would be nice.

Anyway, I think I agree with you on basic principles: We're both arguing
that justice should be applied to everyone equally--and no one should get a
free pass. We just don't agree on what justice means in this case.

I'll let you have the last word on this--as I can't really think of any way
to make this topic "8-bit compatible."

The Devourer comes when you have too much equipment. The author of the
software said it was putin the game to keep players from blowing the internal
stack trying to horde 1000's of objects so a balanace had to be put in.

It's a pain but keeps a little bit of 'Reality' to the game.......

The best cheats for the game are to map out the 1st level and find all the
goodies. The golden apple, razor ice, and many other treasures are yours for
the picking if you know where they lie.

I've seen some criticism for that, but we have to remember the Sneakers had to flee their loft, and someone (it may have been Bishop) said something like "Load whatever you can into the van, we have to get out of here." That's why they didn't have their highest-tech stuff with them for the rest of the film.

2662. Bucholz 800XL upgrade questions

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-25 00:00:00 UTC
From: Aaron Christopher Finney <afinney@prinsol.com>
Message-ID: <360C09E9.E043DE2F@prinsol.com>
Source record: 59741

Has anyone here done one of these upgrades? I obtained a text document describing the upgrade, but I have some questions about it.

First of all, do you have to *remove* the old rams and replace them with the 256 ones (i.e., solder the new ones onto the board)?

Also, what is the DIP header plugging into socket U27? The LS158 on my 800XL is not in a socket at U27, it's soldered onto the board.

Finally, is anyone's PIA socketed? Mine is, again, soldered to the board, and will have to be removed to bend the pins up.

I'd be ecstatic to hear from anyone who's done this upgrade, or who can maybe shed some light on exactly what to do. I am fairly competent with the iron and can follow directions, as long as they're reasonably explicit. I remember looking over the shoulder of the guy who did the 320K to my 130XE so long ago, and I remember piggy-backed rows of ram and a mess of wires...

I've done dozens of these RAM upgrades on 800XL's. I used to
have a fixed price and did them for most of the members of our user group.
Then toward the end of the 800XL production run, I popped one open to find
everything soldered in instead of socketed! Thanks a lot, Jack!!! :)

Desoldering and/or cutting are time consuming tasks, but not
difficult. However, if you're not experienced, I suggest you have someone
else do it for you or swap someone for an 800XL with a socketed
motherboard. A vast majority of them are socketed.

Source record: 59828

Hi Mark,

The Atari 1450XLD address internal Drive 1 as D1: and internal Drive 2 as D2:, if you have an Atari disk drive or 3rd party disk drive hooked up to the SIO bus, then any drive on that bus becomes 2 drive numbers higher, for example, a drive on the SIO bus is ID #1, it then becomes D3: and so forth. There was a DOS written for the 1450XLD called QuadDOS or DOS 4.0, also Chameleon 4.03 has a selection in it for using the internal 1400XL or 1450XLD 300 baud modem, those are 2 pieces of software that have features specifically for the unreleased 14X0 line

Hi Tom,

I dont have exact figures on the 1400XL's, but 75 complete 1450XLD's exist,
8 of them are TONG (large board) versions and a total of 150 cases were stamped
out.

If you'd like more information, please go to the Atari Historical Society:

Curt,

I've also had success using Telelink II with the internal modem on the 1400XL. Since most
of the commands for the internal modem are similar to the 1030 modem. And don't forget
the 1400XL Telecomunicator.

There's one thing that I always wanted to know what happen to. I remember when I worked
at Marriott's Great America (what is now Paramount's Great America) in Santa Clara back
in 1982, there was a Atari arcade in New Orlean's place area of the park. As you walked
inside the arcade there was a plexiglass box that had a computer board that was wired up
to a neon light display in the shape of a mouth. The computer was controlling the sign while
a speech synthesizer produced speech. I don't recall what was being said. But the board
inside was around the size of a 1400XL or your 6402 board. It sure would be nice to find
that device.

I'm searching for a text editor that's simple and takes up little memory. I use Spartados 3.2g with Turbobasic (the "q" version that is optimized for Spartados). I tried using Atariwriter and ran into problems after Turbobasic is loads. I'd like an MS-DOS type editor that is easy to run and then exit and doesn't interfere with Turbobasic. Any suggestions would be appreciated.

Thanks,
Alx

: jack on the back of my Atari. Any suggestions?

: Thanks,
: Falcon

As it happens, the Commodore 1802 is said to be one of the best monitors
to use with the 130XE (or 800, 1200XL, 800XL, or 65XE (?) for that
matter). Cables should still be available from various vendors or you can
make your own from Radio Shack connectors. Consult the Atari FAQ at:

www.faqs.org/faqs/atari-8-bit/faq/

for complete cables or connector pinouts.

You could solder the new rams to the board, but I wouldn't reccomend it. Remove
the 64kb ram chips and replace them with sockets, inserting a 256kb
ram into each one.

> Also, what is the DIP header plugging into socket U27? The LS158 on my

Remove and socket.

> Finally, is anyone's PIA socketed? Mine is, again, soldered to the

Some PIA's in the 800XL series are sockets, most are not. Lucky you, you
got one with no sockets :)

You can do a 320k upgrade on a 130XE by replacing the second bank and using
just one chip. Much easier than the 800XL upgrade.

>Winamp skin?
>
>Michael Schoedel, Atari Nut!

WinAmp is a program for the PC's that plays MP3 song files (an MP3 song is basically a CD track compressed phenomenally with little sound quality loss). One its neat features is the ability to change the way it looks using different "skins." If you want to check out a bit more about it go to http://www.winamp.com and get the skinny and some looks at different skins.

Itay's skin, by the way, is really cool. The controls and some of the text are using the 8-bits character graphics and it's in the familiar white/blue colours we've come to know and love.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Hope someone can Give me advice or point me in the right direction.
I presently am using a rambo XL,SDX,Mio 1meg,Adaptec4000 controller,
and 2 seagate 20mg Hardrives.The harddrives are getting quite noisey
and I,m worried about losing them.I also have a 380mg ESDI Miniscribe
and The MIO book says it will support ESDI.Where do I get an ESDI
controller to work with this HD?.Or should I forget the whole idea.
Any help would be appreciated.
Thanks,

Ray

has anyone else has this same problem?? I run this, and the rainbow pops up for JUST a second, and then defaults to a bluish background...

I can see two options (a and b) for game data and such, but can't get the game to run with the emu.. I have the latest version of atariwin...

paul irvine seems to be able to get this to run, but it won't here!!

I do have a all in wonder pro video card, but the mode seems fine, and I can't think why the rainbow effect would die on me..

if you have a solution, please offer all the settings and such... I have a nice new pII 300 mmx, and want to see how well playablility is (i'd think it'd be dead on now)

Oh another gripe/oddity. I remember artifacting looking more reddish/blue.. it was used to create "colors" and we would just incerase the color saturation of the monitor to enhance them.. on the emus, that's not available, and the colors look more brownish or such.. maybe a new feature could be to select the colors used for artifacting (I know there are settings, but none of them look "right" ...

Its very much a personal thing, the same thing gets mentioned in the C64
ng re the screen colours. Depending on you tv etc etc the colours were
different. I guess the same thing applies to the artifacting..??

Some where, I still have the entire deal.. Except the box. The very first relase came with a
very expensive three ring binder that would stand up, good quality pages, even
a plastic page with sleeves in it to store the 5 1/4" inch disks...
An effort way ahead of the technology of the time.

Makes me start thinking of SSI's Cosmic Balance.. the game that got me to buy
a floppy drive...

(Want's to use 380 meg ESDI hd on mio.)
I dunno.
If that hd doesn't have 256 byte sectors, you can't use it
with the MIO, I understand.
380 meg would be tought, also. The largest partition you
can have is 16 meg. And 8 drives * 16 meg = 128 meg top
limit on what you could get, I think.
I know of no SCSI to ESDI adapter, but I never heard of
ESDI anyways.

It happens if you're using an NTSC computer (American, as opposed to the European), meaning that your computer displays 60 frames per second rather than the European PAL standard of 50.

It also happens if your emulator does this.

Set the emulator to emulate PAL mode, and it should work.

Does anyone have a Bounty Bob version that WILL run properly on NTSC computer (not emulators)? I've seen many versions from many places, none work to date on my 130XE (NTSC).

Hi Atarians,

As some might know i'm an employer at the ANG Computer Systems
company.
Former ANG Software.
We have still some hardware and software for the XL/XE computers.
We will be going to the JHV in Herten(Germany) and sell some of this
stuff.
This stuff is for example: Joust, Into the Eagles Nest, Barnyard
Blaster, Rescue on Fractulus, Thunderfox, Loderunner.
Also we have some cartridges for the 7800 (Sentinel)
Further we have XC12, a few XEP80 and some CX50's(Keyboard
Controllers)

If some people are interrested, please let me know.
I will make a specific count of what we will be having after the JHV
in Herten.

Hi all. I'm trying to find some people who used to program the VIC-20 home computer. Some of the earliest folks to do so may have first programmed for the Apple II and/or Atari 8-bit systems, so I am checking in those newsgroups for any leads. (I've already looked through James Hague's "Giant List of Game Programmers" to no avail on this.)

Although I have an interest in finding anyone who used to program commercially for the VIC-20 home computer, I'm curious about the following items most of all. You see, the six programs listed below were the only third-party cartridge games to have come out for the VIC-20 during the first year of its commercial life. Both UMI and Sierra did work that was far too technically advanced, far too early to have been accidental. The folks who wrote these programs had to have learned their craft somewhere; I'm betting it was on the PET, the Apple II series, or on the Atari 8-bit computers.

Sierra Crossfire Gordon (Walton?) 4k B+ U 1981
Sierra Lunar Leeper Dr. Bob of ICG 12k A R 1981
Sierra Threshold ICG 8k A R 1981
UMI Alien Blitz Peter Fokos, T. Giguere 4k B- R 1981
UMI Amok Roger L. Merritt 4k C R 1981
UMI Outworld Thomas A. Giguere 16k B+ R 1981

Any info appreciated!

Exactly! I've had precisely the same exper-
ience. But every version that I've tried
appears to been European in origin, so
presumably PAL. Fortunately, I have the
cart, but it's less convenient. BTW, I heard
at one time that MANY of the BBSB carts
were defective. Anyone know anything
about that?

Since there are only a few Atari folks using ZIP drives, this is probably essentially trivia, but it turns out that you can copy an Atari system ZIP cart using an "image" (sector) copy with Iomega's "Copy Machine" in the (ZIP) Tools 95. The later version(s) support this, but the earlier version(s) did not. If you had to do this on the A8, you would need a *lot* of patience.

It seems there are a number of versions of SCSI - anybody familiar with the various types and compatability? (I've seen adapters listed for the different pin counts.) At some point in time, it looks like the standard 50 pin SCSI will
be history.

50 pin
68 pin
80 pin

SCSI 2 - still 50 pin?
Ultra SCSI ?
Wide SCSI - 68 pin - 16 bit?
Ultra Wide SCSI - 80 pin ???

Most HD setups let you set a table of partitions. Sure, only 8 are
available at any one time, but you can swap partitions in and out as
required.

Thanks for all the replies on this one, although I have to say that
SIO2PC/APE looks a bit much like overkill for what I wanted
(tracking down Molexes, soldering... yikes!).

Having said that, I'm not about to fry my XE by shoving 15v into the
joystick port either (which is what my original idea would have done.)

2709. synassembler patch

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-27 00:00:00 UTC
From: danver@halcyon.com
Message-ID: <6ulrdtvvl1@nnrp1.dejanews.com>
Source record: 59777

So does anyone have the Synassembler patch listed in
Antic VOL. 3, NO. 2 / JUNE 1984 / PAGE 38 ?? Unfortunately
the code is not listed on www.atarimagazines.com.
I've been really enjoying doing some 6502 development
with this great package (I really like the speed of
assembly and the debugger), but am getting real tired of
loading the translator everytime. If anyone has typed
this in and still has it please email!
Thanks,
Dan Vernon

I don't remember the cards being defective when they came out (I was selling them as fast as I could order them) but I did finally manage to get it to run.. in pal mode, and suggested here!!

MANY thinks to paul irvine for the help.. he sent me a freeze, and I looked at what was different in his settings VS my own ones..

another good question: what scrren mode is the "best" mode for atariwin?? quite a few of them are clipped, and I'd think it'd be best for everyone to have a recommended mode... makes sense, doesn't it??

I know it depends on your screenmode, but what is the optimum setting for speed??

and for sound as well??

Gareee, happilly playing bounty bob, and rescue at fracatlus again, thanks to you guys.. ;))

BTW I have lots of old disks if someone is looking for something that hasn't been converted yet...

Boy, finding those Adaptec SCSI to MFM or SCSI to RLL controllers are
hard enough. Finding an SCSI to ESDI is going to be tough. I don't
have Bob Puff's email address available, but he would be a good place
to start with and see if he has anything like that. But you would probably
spend a lot more money trying to get such a device. Your best bet would
be to find a hard drive with a built in SCSI controller and eliminate the
need for the host adapter (the Adaptec card).

EDSI was (I recall) and enhanced SASI.
They had many more sectors/track than regular MFM drives of the time. In fact,

they had more sectors/track than RLL drives.
17 and 25 respectively? 32 is what I recall.
Also, if I recall correctly, they used the same
type connector pair as MFM/RLL, but I don't
know about the pinouts, naturally. Never
used one, since they were big $ items at the
time they made their appearance.

I am getting rid of some Atari 8-bit software. To avoid having to deal with many trips to the postoffice to send out single items, I am bundling the software into 4 packages. I am asking $25 for each bundle (this price includes shipping cost).

Bundle #1
Atari BASIC Book (Albrecht, Finkel, and Brown)
Atari Basic Ref. Manual
Atari Basic Cart
Microsoft Basic (Box/Docs)
Microprint Printer Interface
Flight Simulator II (Box/Docs)
Scenery Disk 5 (Box/Docs)
Star Scenry Disk - San Fran and Bay Area (Box/Docs)

Bundle #2
Star Fleet I (Box/Docs)
Animation Station (Drawing Pad/Box/Docs)
Decision in the Desert
Ghost Hunter (Cassette) - (Box/Docs)
Ninja (Box/Docs)
LA Swat/Panther
Tobot/Bros (Box/Docs)

Bundle #3
Drag (Box/Docs)
F-15 Strike Eagle (Box/Docs)
Access Triple Pack - Raid over Moscow, Beach Head, and Beach Head II (Box/Docs)
Party Quiz - 4 player trivia (Controller/Box/Docs)
Graphix AT - Printer Interface (Docs)
Centipede Cart
Galaxian Cart

Bundle #4
Gauntlet (Box/Docs)
TrailBlazer (Box/Docs)
Infiltrator (Box/Docs)
Run for the Money (Box/Docs)
Super Huey (Box/Docs)
Meltdown (Box/Docs)
Elektraglide (Box/Docs)
Temple of Apshai (Box/Docs)
Orbit - A Trip to the Moon (Box/Docs)

If interested, please email me. Thank you.

2718. Atari 800 Hardware & Software for Sale

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-27 00:00:00 UTC
From: Dennis <dpfonts@concentric.net>
Message-ID: <360F13D9.CE956769@concentric.net>
Source record: 59786

I have a very large collection of Atari 800 hardware and software for sale.

The collection is to large to inventory completely, but as far as software
is concerned, if it was made for the Atari 800 it is probably in this collection. Below is a list of some of the main items of this collection.

1 - Atari 800 computer
1 - Atari 800XL computer
2 - Happy Drive modified 810 Disk Drives
1 - 810 Regular Disk Drive
1 - Atari Touch Tablet
1 - Atari 850 Interface
2 - 410 Tape Drives
50 - Tapes for Tape Drive
Over 1000 5 1/4" diskettes with probably over 2000 software titles, most of these titles include instructions (either original or photocopied)
Over 30 Books (either original or photocopied)
Assorted Cables, wires, power supplies and joy sticks
Other miscellaneous items

I am looking for best offer $ for the whole lot. I live in Franklin Square,
New York and would prefer someone who could pick up the collection instead of shipping it. If you live outside this area, your offer should be
for the collection. The shipping will be extra. This collection fills about
10 large boxes.

Please email responses to dpfonts@concentric.net, I do not read this newsgroup.

Well, if you are useing an xl you need the program fixxl from the
public domain or your system will crash when you put in the cart.
Next you can use good old dos to copy the cart, but you need to know
if you are useing a 8k or 16 k cart, and use the memdump. The public
domain of Atari has lots of cart copy programs, but I don't know the
names of them.

You should be able to upload your text files onto your PC with no
problems, but be sure you use that program (name escapes me at the moment)
by Matt Ratcliffe that converts Atari ASCII into IBM ASCII (there's also a
program that does the opposite), otherwise the files will look like a
jumbled mess. The Atari uses a different code for the RETURN character.

2729. Re: Atari word processing files -> PC?

Actually, it won't be quite that bad. I use a null-modem connection
running BobTerm at the Atari end and Procomm 95 at the IBM end. I save
the files wherever I want. If I haven't used something to translate all
those Atari EOL characters (ATASCII 155) into ASCII 13-ASCII 10's, the
text just comes out as one or two LOOO

My advice is to use one of the Atari800 code ports for all the games,
the win version is particularly nice but Petr's DOS version is also
superb thanks to a great group effort by Rich, Petr and all the others.

Ad for Atari800win over, as for why you are hooked on Miner with all
these Neo geo games, well that's bloody easy....Gameplay!!

I'm a mad retro gamer as my web page points out and also have a
reasonable PC and a PSX BUT I find myself quite happily devoting hours
to Spelunker, Jumpman, Bandits, Donkey Kong etc etc (oh Star raiders)
because they play a solid game, jumpman is horrid compared to the eye
candy of say Last Resort on the Neo Geo but Jumpman plays sooo nicely.

Strip away all the fancy polygon bits and the CD sound and you will find
a lot of todays games are hollow as hell..

>Hmm...seems odd. I wonder if there is something strange about the JAM!!
>that requires a signal on the chroma line.

Nope. If I take the 40 column signal luma line
only, it is sharp, clear, and crisp. (It's also not very attractive without
color.) But the JAM!! seems very touchy about signal strength. I
don't have a 'scope, YET, but I would think
with a scope it would be pretty easy to figure
out what's going on.

Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

I just picked up a copy of Football Realsports Soccer for the 2600.
While this is not rare, I was wondering why mine is in NTSC. I assume
its called Football because its European and thats what they call Soccer
over there, but wouldn't make sense for it to be in PAL?

About 10:1 at CD quality. This means a song that would roughly be 30-40
megs in raw digital data would be 3-4 megs as an mp3. Very roughly (it
isn't exactly right) you get about a minute per meg of mp3.

Yep I agree!! I've been looking for a pc "port" of star raiders for a long time now (called space rangers)

Maybe with atari redoing thier old titles, like battlezone and asteroids, we'll see a star raiders 99!!

that and a lucasfilm Rescue at fractalus 99 would be SHEER heaven!!

BTW what's everyone's favorite top 10 atari 800 game?? Mine:

(now bounty bob!! ;))
alley cat
rainbow walker
rescue at fractalus
zepplin
drelbs
spelunker
air support
Mr Robot
zone ranger
zengi

>to do this? Is one of the utilities that allows a PC to read Atari disks
>the right way to go?

In my early days of owning an Atari ST, I needed to transfer program DOC files from the ST to the XE. You see, I wanted hard copy of those files and I didn't yet have a printer cable for the ST. Also, I had this great program set for the 8-bit that would reformat and print text into 3-column magazine-style pages, saving reams of paper over straight printing. I didn't have anything like that for the ST--yet.

Anyway, I didn't have a null modem cable, either, and space constaints required me to set the computers up in seperate rooms. What I did have was two 2400bps modems. I put one on each computer and ran a phone line extension cable between them. Didn't use the regular phone line at all. I used Vanterm on the ST and Bobterm on the XE. Bobterm will take care of the ASCII/ATASCII translation if you just hold SHIFT when selecting your transfer protocol.

My setup might not have been very elegant, but it worked, and worked well. It wasn't at all fast by today's standards, but it was fast enough for my purposes. If I were to need to move a bunch of files today from an 8-bit to a PC, I'd probably do it the same way. (except that my XE has a 9600 bps modem on it now...)

TJ

This shouldn't be hard--I never owned many games and I can only think of 10
right now...

1)Miner2049er/Bounty Bob Strikes Back
2)Star Raiders
3)Astro Chase (the game responsible for my nervous tick)
4)Flight Simulator II
5)Star League Baseball/Star Bowl Football
6)Karateka
7)Lode Runner
8)Silent Service
9)Gateway to Apshai
10)Preppie

Here's a nice top ten list with download links from a great atari archive
page:
http://homepages.ihug.co.nz/~aaronat/at_top10.html

I'm just getting into MP3 and from what I've seen, about the
best you can hope to get is about 50%. Maybe I'm way off here or maybe
I'm just using a weird method of computing this. If so, someone let me
know.
I just can't wait until the middle of November when I build my
new system and can actually use a lot of these files and create my own
cd's with them. It'll be cool to listen to a lot of this stuff in the
car!

I have no idea if you can live with the idea of emulating a Commodore 64, but
if you do you can play it on PC64, CCS64 or probably any other C64 emu as
well. The game is readily available on a disk image for that platform.
(I even own the acutal game disk :)

There are so many to choose from, but I'll try off the top of my head.
These are in no particular order:

1. Master of the Lamps: One of the most dynamic soundtracks ever
produced for the Atari 8-bit, with cool visuals to go with it.

2. Star Raiders: Nearly 20 years old, and still one of the most
important and greatest games ever made.

3. Boulderdash: Great fun, cool sound f/x, music. The first computer
game to become an arcade translation (instead of the other way around).

4. Blue Max: Zaxxon meets Star Raiders.

5. Star League Baseball: Wins by a slight hair over Hardball. It had
that cool scoreboard in-between innings like a real game, plus you got
that heroic drumroll when you hit dingers. (Hardball was inventive for
its centerfield camera perspective of the pitcher/hitter, but the game
logic was flawed -- it recorded up to six outs and lacked some of the
flair of SLB.)

6. Karateka: I always thought the "alternate ending" (if you approached
your girlfriend in attack position) was a nice, if unexpected touch.
World Karate Championship had better gameplay and graphics, but not much
in a way of a linear storyline (if you want to call it that).

7. Ballblazer/Rescue on Fractalus: The latter gave me my first heart
attack 13 years ago...

8. Spare Change: Frenetic fun trying to run an arcade.

9. Final Legacy: One of my favorite war games.

10. Planetfall: One of the best text adventures written, which I will
also remember for over the fact that the time I was close to the end of
the game, it took me over two hours (needing to restore the stupid game
around 40-50 or so times). I never spent that much time for what would be
essentially about a half dozen moves! (Well, maybe this shouldn't count,
since it didn't exploit any of the Atari's capabilities.)

2746. Re: Atari XE in black and white

Ah, I'm glad I posted this thread.. I had forgoten master of the lamps, and the star bowl sports games.. those were two of the MOST fun sports games I ever played! easy to learn, and easy to suck someone else into.. ;))

try that with some of these ultra elaborate sports games on any system..you end up playing by yourself, and no one else will even bother looking at the manual beacues they are just so complicated anymore..

2753. Re: Atari word processing files -> PC?

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-29 00:00:00 UTC
From: Jeff Haas <jhaas@ea.com>
Message-ID: <6ur5asjil1@gate.ea.com>
Source record: 59721

All I've got is a 130XE and a 1050, and a special cable that connects from the back of the 1050 to the parallel port on a printer. (Microprint or something, I forget.) I got rid of the modems long ago.

I'm going to try out the single-density disk transfer method. It turns out I can put most of the files I need on just a few Atari disks.

Funny thing is, PaperClip 2.1 printed fine on my Canon BJ200.

Are they big images ?? if so try (well try anyway) turning the fast SIO
off. There are some menu's that won't work with it on.

Hope that works for you...(Atari800win Helpline off :))

There was a terrible Italian monster movie called "Devilfish" (recently shown on Mystery Science Theater 3000) where one of the characters can be seen playing a game on the 2600. I couldn't place the game but it looked similar to Crash Dive from 20th Century Fox. Also, the graphics for the sonar scanner in the movie looked pretty Atari-esque as well. Basically a ship straight out of Air Sea Battle floating on top of some blue stuff, and there was a white blob floating up towards it (I think Crow said it looked like the thing that comes out of the Wizard of Id's cauldron :)

hmmm, in light of recent posts i forgot a few things...

blue max...great game. i played it for 30 solid days before returning it (i was a poor child...sniff!)

as far as new games go i've only put REAL time into 2049er and bounty bob although now that Im reading these posts I'm going to dive into Rescue on Fractalus and master of lamps.

i dont know about planetfall (yet), but I used to obsess over Hitchhikers guide to the Galaxy except for certain puzzles early on that stopped me in my tracks until i found the answers on the internet.

and star raiders...I also used to play on my friend's TRS-80 and there was a BASIC game called star trek. That was the text game star raiders was based on (minus the action). Lately I've enjoyed both Star Raiders on Atari and Star Trek on Reed's TRS-80 emu...

another game me and my friends enjoyed was 'Bombs', but it didnt exist on Atari until I translated the BASIC program over from Apple (there's also an IBM qbasic version called Gorillas). Two castles. Each one would take turns entering canon angle and velocity and shooting at each other...never really distributed beyond my high school...If I ever get AnaDisk to dump it to PC then I'll post it somewhere...

Gareee wrote in message <6ur28o$ood@bgtnsc02.worldnet.att.net>...

I am having trouble contacting Tom Martin, someone who has posted on this newsgroup before. He sells SIO2PC cables and installations from his web page:

http://w3.one.net/~tom_cody/

If anyone has experience dealing with him, please let me know:

reply to: scjohnson@bigfoot.com

Thanks,
Steve

2763. APE/SIO2PC's new faster brother!!! Check it out - FASTER & CHEAPER!!!

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-30 00:00:00 UTC
From: Adi Perry <adiperry@geocities.com>
Message-ID: <361242FE.CAF96724@geocities.com>
Source record: 59639

Hello everyone,

I'm not trying to replace/recreate the SIO2PC/APE, I have
different goals.

I'd like to see the ATARI uses big resources, by connecting
via PC as a gateway.
I plan to build it an interface, and write it a general
software, and not just emulate disks/printers/etc. for it.

I have in mind a simple cable, with no electric components,
just combining connectors. It connects to the PC on its
parallel port, and to the ATARI on its SIO bus, and on the
two game ports (joysticks). All of the above use TTL.

It should provide three types of communication:
1. SIO like transfers. Only for boot purposes (emulates a
disk drive for loading the 'parallel communication driver'
at boot time...)
2. Laplink like transfer. 4bit parallel connection for
each direction by using the ATARI's PIA.
3. Unidirection parallel transfer. 8bit parallel transfer
from PC to ATARI (only). For higher speed loading.

Switching among these modes should be manual.

SIO emulation should work fine with the initial speed at
boot time (19200baud), and could possibly work faster too.
The parallel transfers can go 10-50 times faster than that
and probably much higher...

If you'd like more info, or to say what you think, feel
free to e-mail me at:

adiperry@geocities.com

Jack H. Lee <eplicon@wam.umd.edu> wrote:

: that heroic drumroll when you hit dingers. (Hardball was inventive for
: its centerfield camera perspective of the pitcher/hitter, but the game
: logic was flawed -- it recorded up to six outs and lacked some of the
: flair of SLB.)

If Atari Hardball was anything like Commodore 64 Hardball in the "6 outs" category, the fact that you could rack up 6 outs wasn't really a "logic flaw", since recording the extra outs didn't actually impact on the gameplay, and it's fun to tease your opponent by throwing all of his runners out. I'm curious if this more serious flaw exists on the Atari--in the 64 version, the balls and strikes counts were NOT RESET if a batter pop-fouled out to the pitcher. The out was recorded and a new batter comes up, but if the count was 2-1 when the batter was out, it's 2-1 for the new batter. Can you remember (or go check) if this is the case in Atari HB?

: 6. Karateka: I always thought the "alternate ending" (if you approached
: your girlfriend in attack position) was a nice, if unexpected touch.

I could never get anything OTHER than the "alternate ending" in Karateka. Pissed me off, too.

: : 6. Karateka: I always thought the "alternate ending" (if you approached
: : your girlfriend in attack position) was a nice, if unexpected touch.

: I could never get anything OTHER than the "alternate ending" in Karateka.
: Pissed me off, too.

In the final scene with the girlfriend, you do the opposite of what you would with the enemies. You stand upright and run into her waiting arms for the soap opera finale.

BTW, I don't know if this is true or not, but I heard that in the Apple version, if you approached the girl in attack position, she gave you a low blow (as opposed to a kick to the head on the Atari).

Speaking of which, wasn't there some kind of commercial cheat program that gave you unlimited lives/power for different games? I wonder if Karateka was one of them, and if so, during the that last phase, would you die or would the game freeze up when she hit you?

2768. Re: Atari word processing files -> PC?

Newsgroup: comp.sys.atari.8bit

Actually, I've already done what I needed to do, and it wasn't nearly as difficult as it seemed at first. Go to this site:

http://ch.twi.tudelft.nl/~sidney/atari/

and get all the utilities, and print his instructions. There's only one thing you need to know about Anadisk that's not covered...you may need to "wake up" the disk drive before doing the dump. Pick the SCAN option to have Anadisk take a look at the disk. Then after it gets started, press Esc to stop it, then go to the DUMP option and follow the directions on the web site above.

If you don't do this, you may get an error "Failed Reset. There appears to be a problem with the diskette controller. Press any key to exit" and be dumped back out to Dos. But the Scan option seems to tell Anadisk that the drive's there and it's OK, and it works fine after that.

The order of transfer is:

1. Anadisk - dump file from Atari disk to PC
2. Deana - Convert Anadisk image to ATR
3. Imageman - Allows you to extract individual files, such as word processing files, from the ATR image
4. TT - Converts the word processing files from ATASCII to ASCII.

After that, you'll end up with a word processing file that has some extra characters in it (mine were the formatting commands from PaperClip) but the main formatting will be fine and the text will be readable and editable.

Jeff Haas

Ok I know how to do the flying parts.. but what again are you supposed to do during the gong part?? I don't remember at all anymore!!

and the screen where you walk to the carpet.. is that all you do there??

I think the flying parts are easier now with a gamepad.. but want to try the game again after all these years..

help??

2775. APE/SIO2PC's new faster brother!!! Check it out - FASTER & CHEAPER!

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-30 00:00:00 UTC
From: Adi Perry <adiperry@geocities.com>
Message-ID: <3611598C.E8FC99E3@geocities.com>
Source record: 59730

Hello everyone,

I'm not trying to replace/recreate the SIO2PC/APE, I have
different goals.

I'd like to see the ATARI uses big resources, by connecting
via PC as a gateway.
I plan to build it an interface, and write it a general
software, and not just emulate disks/printers/etc. for it.

I have in mind a simple cable, with no electric components,
just combining connectors. It connects to the PC on its
parallel port, and to the ATARI on its SIO bus, and on the
two game ports (joysticks). All of the above use TTL.

It should provide three types of communication:
1. SIO like transfers. Only for boot purposes (emulates a
disk drive for loading the 'parallel communication driver'
at boot time...)
2. Laplink like transfer. 4bit parallel connection for
each direction by using the ATARI's PIA.
3. Unidirection parallel transfer. 8bit parallel transfer
from PC to ATARI (only). For higher speed loading.

Switching among these modes should be manual.

SIO emulation should work fine with the initial speed at
boot time (19200baud), and could possibly work faster too.
The parallel transfers can go 10-50 times faster than that
and probably much higher...

If you'd like more info, or to say what you think, feel
free to e-mail me at:

I am getting rid of some Atari 8-bit software. To avoid having to deal with many trips to
the postoffice to send out single items, I am bundling the software into 4 packages. I am
asking $25 for each bundle (this price includes shipping cost).

Bundle #1
Atari BASIC Book (Albrecht, Finkel, and Brown)
Atari Basic Ref. Manual
Atari Basic Cart
Microsoft Basic (Box/Docs)
Microprint Printer Interface
Flight Simulator II (Box/Docs)
Scenery Disk 5 (Box/Docs)
Star Scenry Disk - San Fran and Bay Area (Box/Docs)

Bundle #2
Star Fleet I (Box/Docs)
Animation Station (Drawing Pad/Box/Docs)
Decision in the Desert
Ghost Hunter (Cassette) - (Box/Docs)
Ninja (Box/Docs)
LA Swat/Panther
Tobot/Bros (Box/Docs)

Bundle #3 Drag (Box/Docs) F-15 Strike Eagle (Box/Docs) Access Triple Pack - Raid over Moscow, Beach Head, and Beach Head II (Box/Docs) Party Quiz - 4 player trivia (Controller/Box/Docs) Graphix AT - Printer Interface (Docs) Centipede Cart Galaxian Cart

Bundle #4
Gauntlet (Box/Docs)
TrailBlazer (Box/Docs)
Infiltrator (Box/Docs)
Run for the Money (Box/Docs)
Super Huey (Box/Docs)
Meltdown (Box/Docs)
Elektraglide (Box/Docs)
Temple of Apshai (Box/Docs)
Orbit - A Trip to the Moon (Box/Docs)

Throw in the movie "cloak and dagger" somewhere on the list. The whole thing involves what looks like a 5200 cartridge. Secret plans added onto the board, and spies trying to get the plans, and kids saving the world. Even if it wasn't an Atari cart, the plot is right out of a videogame.

Ward Shrake

Remember the Commodore VIC-20? Like classic videogames?

2780. Re: Movies Sponsored by Atari

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-30 00:00:00 UTC
From: ansk@hotmail.com
Message-ID: <6ut10s$9a$1@nnrp1.dejanews.com>
Source record: 59735

I occasionally read a brief but interesting article on a related subject in a computer magazine today. The conclusion in the article is that computers seemed more frightening (to the general public) in the 80s. Two of the movies that are referenced in the article are already included in news posts here: Electric Dreams and D.A.R.Y.L.

The additional title found in the article is Weird Science, which is supposed to feature Atari equipment. I saw that movie twelve years ago, but I cannot recall that I noticed any Atari computer or video game in it. On the other hand, I have seen Fright Night too, and I did not notice the Atari there either.

In this magazine today they say that the two teenage boys in Weird Science used Playboy pictures and an Atari (computer?) to create the woman of their dreams. It could be that the name Atari is used by the author of article because it represents video games and to some extent home computing of the 80s. Or is there an Atari computer in this movie?

Anders

Are there any user groups in the Hampshire area in the UK? Also, does anybody in the UK have any Atari 8-bit hardware for sale (working!)?

Thanks,

Trystan

2782. Reinhard's Rarities Auction Update 9-29-98

Newsgroup: comp.sys.atari.8bit
Date: 1998-09-30 00:00:00 UTC
From: rpribish@dcn.davis.ca.us
Message-ID: <HaoQ1.1451$Tw2.1901685@news12.ispnews.com>
Source record: 59737
Cross-posted to: rec.games.video.classic,rec.toys.vintage,rec.toys.misc,rec.games.vectrex,alt.culture.us.1980s,rec.games.video.marketplace,comp.sys.atari.8bit

Welcome to yet another Reinhard's Rarities Auction!
I have the following items available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Bid increments:
$1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Wednesday, September 30, 1998 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

http://www.pribish.com/auction.txt

Thanks, Reinhard

This isn't really relevant to this newsgroup, I know, but MP3 is capable of compression rates of around 10:1 without noticeable loss in quality. That's 90%, not 50%.

I assume the 400 used an identical supply to the 800. In that case, there
IS no polarity. 9 volts AC.

This Winamp skin...does it exist???

Mailed the author...looked on the site..

No response...

Was this a joke post...if not, where can I get it.

Has anyone had it??...or is this some idiot messing around, hoping NOT!

Gareee (gareee@worldnet.att.net) wrote:
: Ok I know how to do the flying parts.. but what again are you supposed to do
: during the gong part?? I don't remember at all anymore!!

Ring it three times (I believe). Then an evil genie or something like
appears and blows smoke. The smoke becomes color and tones, and you have
to match that to the gongs below, which you tap. On the tougher levels,
you have to do that by memory than the visual/audio cues, since you only
get a brief clue before all the notes turn grey. Each of these genies
holds a part of the lamp, and when you get them all, the game ends.

: and the screen where you walk to the carpet.. is that all you do there??

You walk to the carpet, the computer sits you down, and then you fly
away...

I have a program that runs on the A8 that coverts back and forth
between those and other formats (such as Mac, PET, Amiga). Real
handy.

Huh, it's a very difficult problem. Can you tell me please which
emulator do you use?

There are different. If you want to turn the disk on a real ATARI you
are able to put the disk out of the floppy and turn it! On an emulator
you should have both sides of the disk as file-mirrors. If the
emulator tell you to turn the disk you have to change the
first-side-mirror with the second-side-mirror. This break must allow
the emulator. After it you must work continue as you don't break the
task.

> 2-1 for the new batter.

Well I've never seen that happen on the Atari version, and I've played
a good few games, although that doesn't mean that that bug isn't
there. The biggest flaws I've seen in the Hardball logic have to do
with base running. Once you've decided to run for the next base,
there's no turning back. Runner on 2nd, you send him to 3rd, he gets
half way there when 3rd base receives the ball, and all you can do is sit
there and watch your runner get out. The other is when you've got a
man on 1st and the next player hits the ball. The player who just hit
the ball won't actually reach 1st unless the other player is almost on
2nd. If he's not, then the player gets suspended in mid air until the
other player gets far enough away. It does add some excitement to the
game though, especially on tight plays. The way around that one is to
send the player to 2nd as soon as you see its going to be a hit rather
than letting the computer do it for you.

On the plus side, I like the way each player has different abilities.
Some run faster, others hit the ball harder. As well as the way it
takes pitchers time to warm up, and then they get tired after too many
pitches.

All this reminds me of when Atari User (UK) reviewed Hardball, all
good and well, but the version they reviewed wasn't the Atari
version (I think it might have been the Commodore version that they
actually reviewed). You could tell from slight differences in the screen shot
and game description.

I've never played Star League Baseball so I can't compare them, but
Hardball is one of the few sports games that I actualy like playing,
even against the computer (although a human opponent is more fun).

2792. Amac and Mac65 absolute mode commands

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-01 00:00:00 UTC
From: Raphael James Espino <rje@co.umist.ac.uk>
Message-ID: <v7ypvccy459.fsf@co.umist.ac.uk>
Source record: 59660

Hi all,

Does anyone know if in Amac and Mac65 there is a way to force a
command to be interpreted in absolute mode rather than zero page with
an operand between 0 and 255?

So if I type

LDA 0

it gets interpreted as LDA absolute mode, from address 0, generating 3
bytes rather than LDA zero page mode, generating only 2 bytes. I know
I can force it with DB or .BYTE commands and the absolute mode command
but I was wondering if there was a more elegant (and more readable)
way around this.

Thanks

2793. Reinhard's Rarities Last Newsgroup Update 9-30-98

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-01 00:00:00 UTC
From: rpribish@dcn.davis.ca.us
Message-ID: <bcJQ1.1981$Tw2.2503364@news12.ispnews.com>
Source record: 59661
Cross-posted to: rec.games.video.classic,rec.toys.vintage,rec.toys.misc,rec.games.vectrex,alt.culture.us.1980s,rec.games.video.marketplace,comp.sys.atari.8bit,ucd.swap

THIS IS THE LAST NEWSGROUP UPDATE!!!

If you are interested in bidding on or trading for anything here,
now is the time to do it. Everything goes to an e-mail only,
once-twice-sold format from now on...

Welcome to yet another Reinhard's Rarities Auction!
I have the following items available in my current auction.
I'm looking to trade for Atari 2600 and Atari 400/800 carts ONLY!

You can find a list of what I already have on my Atari 2600 pages at:

http://www.pribish.com/atari.html

I'm looking for Atari 2600 and Atari 400/800 stuff not on my list,
so please e-mail me with any trade offers. There are only a few
rules to help speed this along...

1) Don't bid unless you plan to buy
2) I reserve the right to trade or pull any item

Bid increments:
$1: Amounts from $1 to $20
$2: Amounts from $21 to $40
$3: Amounts from $41 to $60
$5: Amounts over $60

I'd prefer payment of a U.S. Postal Money Order, available at the post
office for 85 cents, and will ship the day or day after the M.O. arrives.
Items will be sent 2 weeks after payment by check to ensure the check
clears. Buyer pays shipping, which is $3 flat for any number of carts,
shipped within Canada/US. The shipping on systems, controllers, etc. or
for winners in overseas destinations will be the exact shipping cost.

This auction will run until Wednesday, September 30, 1998 and
switch to an e-mail only 24-hour Once-Twice-Sold format.

You can get an up-to-the-minute auction update before you bid at:

http://www.pribish.com/auction.txt

Thanks, Reinhard

Louis,
The cart that came with the Atari Touch tablet was Atari Artist. You
might find it at www.myatari.com. I'm not sure of what other software
that was designed specifically for the TT. However, building yourown
isn't all that difficult. I've done some simple stuff in BASIC, myself.

Anyone ever finish the game? The full 41 levels? I was able to finish
the seven trials... that was hard enough.

Also if you are using this on certain emulators, the colors do not
show on the genie/gong screen!! Make it REALLY hard!

2796. Re: Hardball (was top 10 atari 800 games... (okay...))

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-01 00:00:00 UTC
From: Jason Compton <jcompton@xnet.com>
Message-ID: <6uvr41$8ec$1@flood.xnet.com>

Raphael James Espino <rje@co.umist.ac.uk> wrote:

: there. The biggest flaws I've seen in the Hardball logic have to do
: with base running. Once you've decided to run for the next base,
: there's no turning back. Runner on 2nd, you send him to 3rd, he gets

Yeah, that was a real bummer in terms of gameplay.

: there and watch your runner get out. The other is when you've got a
: man on 1st and the next player hits the ball. The player who just hit
: the ball won't actually reach 1st unless the other player is almost on
: 2nd. If he's not, then the player gets suspended in mid air until the
: other player gets far enough away. It does add some excitement to the
: game though, especially on tight plays. The way around that one is to
: send the player to 2nd as soon as you see its going to be a hit rather
: than letting the computer do it for you.

Huh...I think there's a similar phenomenon in the Commodore version, where on a fly ball the 1st base runner won't automatically advance all the way--you have to commit him, and of course if the ball is caught you're done for.

: On the plus side, I like the way each player has different abilities.
: Some run faster, others hit the ball harder. As well as the way it
: takes pitchers time to warm up, and then they get tired after too many
: pitches.

Here's another comparison question: I am virtually certain that for the position players, the batting/running abilities in the Commodore version are actually hardcoded into the ROSTER POSITION, not the player. If you change the batting order, the #6 batter may be different, but he still bats like the old #6 batter. (Case in point: while playing as the blue team, catcher Morra is the most hopeless batter in the world. If you move him to another spot he hits fine, but the guy you put INTO his spot hits like a wimp.) Have you ever tried this out? (You can customize your roster as much as you want before the game actually starts...there's no "swap player in roster" function, you just have to substitute in a placeholder while you make the exchange.)

No, I think Raphael wants an LDA instruction that loads from an address --
as in LDA $2000 -- with a page-zero address -- as in LDA $0000. This is not
the same thing as LDA $00 -- the LDA is stored as a different instruction.

Sorry, I don't know any elegant way to do that. You may have to force it
using .BYTE commands.

2801. Atari800win 2.4a - No Sound

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-01 00:00:00 UTC
From: Richard Smith <rsmith@planeteer.com>
Message-ID: <w0QQ1.3308$YP5.6836042@tor-nn1.netcom.ca>
Source record: 59669
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari

Does anybody have any idea why I don't get any sound from Atari800win 2.4a ?
The older versions used to work fine on my PC, although I did lose sound if
I switched tasks and returned to the emulator.

If you have any ideas then please email me at rsmith@planeteer.com

Thanks in advance.

Richard.

Does anybody have any details on the RANA 1000 disk drive for the Atari?
Power requirements, polarity etc?

Please email responses to rsmith@planeteer.com.

Thanks in advance,

Richard.

I really hate this question!

If you have a car, are you going to rob banks with it?

So to comply with what you thinking:

I'm going to copy all the protected games and put them on the
newsgroups.
Are you happy now?

I'm pissed.

(Some discussion about absolute addressing in assembler.)
(sorry no quoter here, but I'm not sure how I'd quote this one
anyway.)
Seems like you're talking about addressing modes in assembler.
There's abosolute, immediate, zero page, zero page-indexed.
absolute indexed and indexed indirect (two ways, y and x).
The simplest thing is to know difference between immediate
and absolute addressing.
I think the example was LDA 0.
That would put the contents of address 0 in the accumulator,
an example of absolute addressing (I don't think you're
supposed to access address 0, actually, LDA $600 would
be ok.)
If you want to put a 0 in the accumulator, your
assembler code would be LDA #0. This is immediate
addressing.

Do you get a direct sound error something like "my_eval etc etc etc"
error or have you had this error ever?

If you get that it switches sound off totally. Try deleting the registry
key or resetting all the settings.

PS is this on a PII machine ???

of course, to improve elegance in your source,
you could use a macro like this (ala Mac65):

100 .MACRO ABSLDA %1
110 .BYTE $AD, <%1, >%1
120 .ENDM
130 ; then you do absolute lda's like this:
140 LDA $20FF
150 ABSLDA $20FF
160 ; -or-
170 ABSLDA 0

I picked up one a few weeks back for 50 cents at Value Village. I figured no big loss if I'm wrong, so I just plugged in a standard Atari (1050/810/400/800) 9V AC power supply and it has worked fine. Its really a great drive, and has performed well leaving it on for days at a time.

Just curious is to the reason you want to do this. If you just want a 3
byte
instruction you could use a NOP followed by LDA 0. Or use LDA 256
and self modifying code to change the 256 to 0 :-).

MSG is a useful command that is not documented in the manual that can output text strings or hex values as your file is being compiled. BTW: How is REAL6 slightly broken?

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV connector, original cost $599.00, Joysticks $19.95 each, asking $50.00 or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers, manual, power supply, connecting cables, oil, original cost $399.95. Also have a non-working 1027, can be fixed at any Atari service center, both printers cost new $399.95 each, asking $100.00 for both of them. Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very good condition, like new, supports single and dual density modes, includes power supply, original cost $179.95, asking $75.00. These sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific programs, already wired for Turbo-816 installation, just need to re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the 256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for $59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual, Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE BADLY someone has to have one, or a trak double-sided slave drive. MAKE OFFERS!!

As Per US Code, Title 47, Chapter 5, Subchapter II 227
Unsolicited commercial advertising is NOT Welcome here

It was actually called Protector 2. The Jag game is different. It's more
like Defender than Protector2 was, as near as I can tell.

Some where, I still have the entire deal.. Except the box. The very
first relase came with a
very expensive three ring binder that would stand up, good quality
pages, even
a plastic page with sleeves in it to store the 5 1/4" inch disks...
An effort way ahead of the technology of the time.

Makes me start thinking of SSI's Cosmic Balance.. the game that got me
to buy
a floppy drive...

Hi,
I am in desperate search of a game called "Attank" programmed by Joel Gluck released under APX. My cassette tape for my Atari 400 has long since died with this game on it and I would really like to play it again. If anyone has an image of this game that will play in an emulator could you please email it to me?

Also I am looking for another dead cassette game called "Escape from Epsilon" programmed by J.D. Casten released under Antic. This games is not as important as the previous.

thanks in advance
Jeremy Coolidge, email: coolidge@wave.home.com

2822. Re: SCSI Terms / Compatability

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-02 00:00:00 UTC
From: bpeltzer@direct.ca
Message-ID: <36151d9d.1852062@news.Direct.ca>
Source record: 59683

I've had a fair bit of experience with SCSI over the past several years so here goes....

First, lets look at the connectors on the drives (forget the external connectors for now). Narrow SCSI, 8-bit data path uses a 50 pin connector. Wide SCSI, 16-bit data path uses a 68 pin connector. The 80 pin connector is called the SCA connector for Single Connector Attachment (or some such). It is meant for RAID subsystems, and is extremely uncommon in desktop systems. SCA drives have the regular wide SCSI bus connections as well as the power and SCSI id lines all pass through the one unified connector.

Now, we come to the ugly part. 8-) First there was SCSI 1: 2.5 MB/s (remeber that B is for bytes, not bits) asynchronous and 5.0 MB/s synchronous transfer rates. It wasn't really a "standard" until the SCSI 2 standard was ratified. SCSI 2 really was the first proper standard for SCSI IMHO. It included definitions for non-drive type devices such as plotters, scanners, cd-roms etc. It also included Fast SCSI which doubled the previous bus clock rate to get a 10.0 MB/s transfer rate. The specification was originally to include Wide SCSI, but that later got put into SCSI-3. Also, SCSI 2 is backward compatible with SCSI 1. Wide SCSI doubled the bus to 16 bits and with Fast Wide SCSI, you got a bus transfer rate of 20.0 MB/s.

Now we are starting to come to more modern variants of SCSI. Ultra SCSI again doubled the bus clock rate to give 20.0 MB/s with narrow and 40.0 MB/s with the wide version. Also, with each doubling of the bus speed, we had a corresponding reduction in the total length of the SCSI bus. Which is why for Ultra 2 SCSI, we have a new bus electrical interface called LVD or Low Voltage Differential. Earlier versions of SCSI had either a single ended interface (voltage and ground) or a differential interface (+/- voltages). If you used an older differential drive with a single ended controller (or vise versa), and the differential device didn't include the ability to "sense" the bus, you could fry the controller and/or the drive. With LVD, the signals use a lower voltage (hence the name) and typically can sense the bus to either switch automatically between single ended or LVD or at the very least, not fry stuff. Differential drives allow you to extend the length of the bus significantly over single ended which is important with Ultra 2 SCSI because the bus clock rate has again been doubled to give 80.0 MB/s over the 16 bit bus. Without LVD, the length of the bus would become unmanagebly short. 8-)

Each of the newer versions of SCSI are backward compatible with previous versions, but with Ultra 2, you need LVD to do Ultra 2. If

you don't use LVD, you revert to Ultra speeds. So if you mix Ultra 2 drives with older drives, you give up some of the performance of the Ultra 2 device. This is the reason that Adaptec (no, I don't work for them), on their AHA-2940U2W controller, used two separate busses: one for LVD devices and one for single ended devices. This way you can get the full performance of your Ultra 2 devices while still being able to use a cd-rom. Of course, this controller is a PCI controller so you wouldn't be able to use it on an Atari. 8-)

I'm sure I missed something in there, but this give the general idea. It's late.

Bruce.

Thanks for all the replies on this one. It looks as though either macros or DB/.BYTE commands are going to be the way to go. Just to clear things up (as my original post has caused some confusion), I was looking for some way to force Amac and Mac65 to interpret

LDA 0

as $AD $0 $0 (read the value stored in absolute location 0 into the accumulator), instead of $A5 $0 (read the value stored in zero page location 0 into the accumulator). I realise that either way the same value will be loaded into the accumulator ($0 is the same address as $0 $0), but the difference is that the first version produces 3 bytes instead of the 2 that the second produces. By default the assemblers will see LDA 0 and interpret it as $A5 $0.

Someone also mentioned that address 0 might be invalid. I can't remember off the top of my head what is stored in address 0 on the Atari (maybe nothing too important), but LDA 0 (both zero page and absolute versions) is valid.

As an aside, I was looking through the Amac executable for clues, and came across a few interesting bits and pieces, such as the REAL4 and REAL8 commands. Amac has the REAL6 command to produce numbers in floating point format (even though it is slightly broken). So why the 6? Why not just REAL? Apparently Atari had originally planned REAL4 and REAL8 commands (presumably 4 and 8 byte versions of floating point numbers) but then took them out. They've left the names in the code,

but they can't be used from the assembler.

Thanks again to all who responded.

In article <19980927084728.12556.00000029@ng11.aol.com>, LWhite6497 <lwhite6497@aol.com> stated:

> 50 pin
> 68 pin
> 80 pin
>
> SCSI 2 - still 50 pin?
> Ultra SCSI ?
> Wide SCSI - 68 pin - 16 bit?
> Ultra Wide SCSI - 80 pin ???

50 pin - Any 8-bit (data path) SCSI, from as far back as SCSI-I to Ultra SCSI (AKA, SCSI-3). There are some devices that use a 25-pin interface (obtained by eliminating most of the ground lines). Common 50-pin external connectors are the Centronics type connector, and the newer high-density DB-50 (sometimes called a "SCSI-II" connector). There is also an older, full-sized DB-50, but this is rarely seen.

68 pin - Any Wide (16-bit data) SCSI, Ultra or not.

80 pin - SCA (Single Connector Architecture). Combines a wide SCSI interface and power connections into a single connector, which makes it easier to swap out drives in systems such as servers.

I doubt you will see the 50-pin interface going away anytime soon, as there are a number of devices that simply do not need the additional speed, and the 68-pin cables and connectors (especially for external devices) still demand a premium.

Another item to keep in mind is that apparently a Wide SCSI device can be used on a "narrow" SCSI bus by use of an appropriate adapter. Transfer speeds will of course be slower, as they would if you use an Ultra SCSI device on a SCSI-2 controller. It rarely makes economic sense to do this, however, which is why it is not well know.

I heard the other day that a new game called "Protector" is coming
out for the Jaguar. I'm not sure but wasn't there an old 8-bit
game by the same name that played similar to Defender? Also does
anyone know if the Jag version is the same or different?

Thanks,
F.Vinas Jr.
Jag fan to end...

The only way I know of to do it is to sign up with an ISP that offers
shell (text only) accounts and Lynx, a text only browser. You'd then log
onto the service with an Atari 8-bit and modem running a VT-100 terminal
program like FlickerTerm 80 or Ice-T.

Yes, the Atari 8-bit computer SIO cables have a 13-pin female connector on each end and are wired straight through (1 to 1, 2 to 2, etc.). Pin 6 is connected to an overall shield to reduce RF radiation. The pins (looking at the computer connector) are numbered like this:

2 4 6 8 10 12
1 3 5 7 9 11 13

In one word: disassembly =) I've been fixing up a disassembler that
some one sent me a few years back. It produces both Amac and Mac65
compatible output. In order to test it I've been disassembling files
and then re-assembling them, and it works fine until it comes across a
3 byte instruction referencing a page zero address. If the dissasembler
comes across an instruction like $AD $0 $0 it will output LDA 0 (or
whatever), but the assembler will intepret LDA 0 as $A5 $0, which is
not the value in the original file, hence the re-assembled file will
be different to the original.

When (if?) I get this thing working right I'll put it up on the net for
others to enjoy too.

I don't have a MAC but the reason it can hang on the PC is that the
machine type needs to be set to PAL to work. So if these emu's have a
country setting for PAL or NTSC then make sure its set to PAL.

If that does not help then post exactly where it stops working..

Hope the other bit fixes it tho..

Hit the CTRL key first then do a shift F5, this happens anytime you use
a CTRL F1 etc to load a disk. Once you do that it seems to throw the
keyboard a wobbly...but just 1 push of the CTRL key fixes it till you do
a shortcut disk load again.

Rich knows about this bit..

2843. Best Atari Assembler?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-03 00:00:00 UTC
From: Nick Kennedy <nkennedy@cswnet.com>
Message-ID: <6v5efa$7ha$1@news.csw.net>
Source record: 59561

Regarding a recent question on this subject--

I actually like AMAC, the Atari assembler on disk. I don't think it stayed on the market long because it got killed by the M65 cartridge. It was slow and had real annoying and clunky copy protection. The good news:

The copy protection is very easy to remove.

When used with a ramdisk, SIO2PC, or run on an emulator on the PC, the speed is just fine. Now you have a very robust, full featured assembler which uses ordinary text files for input (no line numbers or weird BASIC type editors.

Regards,

Nick
(The SIO2PC guy)

Anyone care to speculate WHY it only
runs on PAL systems? It was originally
an NTSC cartridge. That suggests to me
that it's something fairly simple that prevents
it from running on an NTSC system. (?)
I've seen two different versions of BBSB
on a real Atari, and neither of them would run. The "best" version put up a
title screen. then died when it initialized.

Hello Bertrand M.
For about 10 years ago I started in the Atari 8 bit scene The Pokey Foundation. I worked for free for about 5 years. After these 4 years I decided to get some money for my work. I started ANG Software. Almost 5 years ago I had a very bad car-accident. My wife is still home because of this accident. That year was very difficult for me and my family. A lot of things went wrong, like the things I had to do for ANG Software. Fred Meijer took over my work and tried to re-organize the mess I had created that year. Some packages are not send to the 'owners' I'm very sorry about that, but I'm not a thief! If you tell me how you have payed and what you have ordered, maybe we can work it out.

John "not a thief" Maris

The original game was intended for NTSC machines, but the person who "cracked"
it (converted it from cart or whatever to a disk file) was European, and had a
PAL machine. This cracker added his own KEWL WHIZBANG I-AM-A-GENIUS title screen,
which doesn't work on NTSC machines because it needs the extra time per frame PAL
machines allow. Silly cracker.

(No, I don't know how to bypass the title screen)

I would guess its coded around timing and the US 60hz throws it *truly*
out of sync. A rare item but I guess that's all it can be.

No such game was made, but there were several space games that were based
on STAR WARS (the movie, that is). Then again, "Star Raiders" was
inspired by it, too. There was one called "Star Fire," which used a title
logo similar to the movie. It came out around 1978, if memory serves.
You had a first person perspective in a cockpit, with crosshairs and a
computer dashboard and shot enemie ships that looked like TIE Fighters.
Maybe this was what you remember? It's the only one I can think of that
would resemble "Star Raiders" to some extent.

2865. My new web page

I'm not sure if this is what your looking for, but I found this in the
MAC/65 manual:

Page 68
6.1.4 Zero Page Forward References

MAC/65 can not properly assemble a forward reference to
a zero page label (usually, you will get a phase error). The
Atari cartridge (EDT ASM) generally can, but it has other
limitations on addressing modes which MAC/65 does not
suffer under.

You can usually avoid phase errors simply by moving your
equates for zero page locations to the head of your assembled
code.

Your best bet is to probably use labels for all your zero page
addresses that your using. Or try sticking with using hexidecimal
values for the address. For example:

Begin LDA $0

That way MAC/65 should be able to identify it as a address and
not a immediate value like #$0.

Hope this helps.

Here's what Mapping the Atari says about location 0:

0,1 0,1 LINZBS
LINBUG RAM replaced by the monitor RAM. See the OS
Listing, page 31. It seems to be used to store the VBLANK
timer value. One user application I've seen for location zero
is in a metronome program in De Re Atari. Also used in
cross-assembling the Atari OS.

That was from page 3.

Also on page 201:

00 00 LNFLG
Used by the Atari in-house debugging programs and OS on
power-up.

My previous post, I thought you were trying to get the assembler
to do a 2 byte instruction and not a three. I fail to see the reason
why you would require a three byte instruction. Your taking up
an extra machine cycle then is necessary to obtain a value from
a zero page location. Unless your doing this to waste time or obtain
a specific time interval. I think the gentlemen who posted the
suggestion to do the two byte instruction follow by a NOP should
obtain the same basic result as doing the three byte version, on
a time-cycle basis.

Well It's been a long, long time, so I can't remember if I'm supposed
to know what "Saga versions" of the Scott Adams adventures are.
But in non-graphical form, I've played 1, 4, 8, 10, and 12. And
possibly the others, too.

Wow, Attank! I haven't played that in absolutely ages. Er... well, I
guess that goes without saying. Wasn't there a "companion" game to
this one called Gunslinger or something like that? Also released by
APX.

OK, I've been looking for an *ancient* Atari game for years. I used
to own this one... still have the disk even, although it's been fried
for a long time. The game is called Mar Tesoro. I believe it needed
basic to run. It was an undersea diving game.

Gareee you wouldn't happen to have this, would you? I've never seen an
image of this on any FTP site.

Does anyone even REMEMBER this game?

TIA!

2871. Different versions of Bounty Bob?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-04 00:00:00 UTC
From: procyon@hector.asc.upenn.edu
Message-ID: <6v7k30$7mo$2@netnews.upenn.edu>
Source record: 59589

I've been playing Bounty Bob strikes back on Atari800Win and
Virtual Super System. Are the 5200 and disk versions supposed to be
different? Because on the 5200 version I play on VSS has two little
platform on th upper left part of the screen just right of the elevator,
and they're made of two floor segments, which makes for relatively easy
jumping. But on the computer version, those two platforms are made of
just one floor segment each, and I can't possibly determine a way to reach
the higher of the two! Is this supposed to be this way? Because it seems
near impossible to pull off. Is there another disk version of the game
floating around that corresponds to my 5200 version? If anyone knows,
please let me know.

P.S. I'm having trouble with VSS and sound. The init screen says it
detects my card, and I have the BLASTER environment set in my autoexec.bat
(correctly, as confirmed with Win95's system info), but yet I get no
sound... anoyone have any suggestions? Either newsgroup followup or
personal email reply would be appreciated. Thanks.

hmm lemme looksee.. if I have it, maybe there's someone out there that can convert for the masses...

actually, I'd love to conervt all my old atari picture disks.. antic sold some (without my credit or approval) long ago as "heavy metal" art disks...

they finally did aknowledge me, though, and even sent me a royalty check!! I did alot of "fun with art"
, and even got a pre-release from the author!! I think I even still have the disk somewhere.. ;))

> these is for $50

That's not entirely true. The 850 is one way of doing it. What you
really need is to get your Atari and your modem talking to each other
(which is one of the things the 850 can do). There are also other
interfaces available, or you can build your own (if you have some
experience with a soldering iron). You can find details of one home
built interface at:
http://aegis.mcs.kent.edu/~clisowsk/8bit/rvert.html

If you don't know one end of a soldering iron from the other then
maybe you could find someone to build the interface for you. Either
way it should work out at less than $50. I built my own interface a
couple of years back (from a different set of diagrams) and I've had
no problems with it. Although as with anything be very careful, as
you could cause some damage if everything isn't connected right.

I was at a yard sale yesterday and this guy had more 800xl stuff than I have ever seen in one place. there was a 15' column of boxes stacked 5 high. He has many 800 xl's and peripherals(happy drives, prom burner, 1200 baud modems, controllers, and boxes of floppy programs. It seems he was a hacker in the 80s(when this stuff was being produced) and he has ALL KINDS of stuff. He had much more inside his house, including several modified 800 xl's. He is selling the whole lot for $275...more than I want to spend, but if I found a co-investor or two I'd be willing to split it up with them. Also included were several monitors for these systems(about 5 or 6)

please let me know today if anyone in NJ/NY/PA is interested ASAP and I will call him up. Ideally I'd like to split 3 ways ($93 each)

Far too good to pass up this opportunity, his wife wants the stuff out of the house

I bought the entire collection of ANTIC and ANALOG magazines from him for $5

email ASAP to smile4@voicenet.com

thanks, John

Hello Bertrand M.
For about 10 years ago I started in the Atari 8 bit scene The Pokey Foundation. I worked for free for about 5 years. After these 4 years I decided to get some money for my work. I started ANG Software. Almost 5 years ago I had a very bad car-accident. My wife is still home because of this accident. That year was very difficult for me and my family. A lot of things went wrong, like the things I had to do for ANG Software. Fred Meijer took over my work and tried to re-organize the mess I had created that year. Some packages are not send to the 'owners' I'm very sorry about that, but I'm not a thief! If you tell me how you have payed and what you have ordered, maybe we can work it out.

John "not a thief" Maris

2887. Atari 8-bit webring

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-04 00:00:00 UTC
From: Raphael James Espino <rje@co.umist.ac.uk>
Message-ID: <v7y4stk2m27.fsf@co.umist.ac.uk>
Source record: 59605

Hi all,

This is a subject that's been skirted around in the past, but it looks as if it's time to do something about it. A couple of months back we had a discussion on c.s.a.8 about starting an Atari 8-bit webring (for those who don't know what a webring is, go visit http://www.webring.com). At that time, there seemed to be people in favour of it. So some of us (myself included) started taking some steps towards creating one.

There are now 3 Atari 8-bit webrings listed at www.webring.com. One (with only 1 site) was started a while back and then abandoned, this one I knew about. But two new ones have sprung up, both with zero sites at the moment - http://www.nacs.net/~classics/webring and http://www3.sympatico.ca/gary.chisholm/atari (no point in anyone jumping to either of those sites *just* yet as those webring's don't seem to be up yet). I've also been taking steps towards doing the same thing, and have even created a home page for the ring, and a logo, but not registered it yet, I was about to do that when I spotted the other 2. So in order to avoid duplication of effort and creating several fragmented webrings, maybe those of us interested should join forces. I guess there will be more than enough work involved in setting up and maintaining a webring to go round =)

So how about it then? If anyone else is interested in setting up a webring, then e-mail me (address is listed below) and lets get this thing off the ground.

2890. FS: 800xl with stuff

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-04 00:00:00 UTC
From: William Shieh <wshieh@pol.net>
Message-ID: <3617ECFB.199551EF@pol.net>
Source record: 59608

hi everyone:
anyone interested in buying the following, preferably as whole sets?

Atari 800xl
Happy 1050 drive
1027 printer
1030 modem
approx. 150-200 disks of games/programs

Atari 1040ST with approx 100-150 disks of games

Atari 5200 with trackball, 17 games

please email any offers.
thanks!

2891. Atari 2600 prototypes wanted

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-04 00:00:00 UTC
From: Tempest <reicher6@pilot.msu.edu>
Message-ID: <361805A1.4016@pilot.msu.edu>
Source record: 59609
Cross-posted to: alt.atari.2600,rec.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari,alt.atari.2600.vcs

I am looking for an and all prototypes for the Atari 2600. I am willing
to pay some cash, but I would really like to trade for them instead. I
have lots of things to trade at:

http://pilot.msu.edu/user/reicher6/atari.htm
or
http://pilot.msu.edu/user/reicher6/2600.txt

Tempest
reicher6@pilot.msu.edu

P.S. I'm also looking for the following games

Crazy Climber
SQ: Waterworld
Rubiks Cube
Motorodeo
Ikari Warriors

2892. Re: Best Atari Assembler?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-04 00:00:00 UTC
From: Ken Siders <ksiders@columbus.rr.com>
Message-ID: <8FVR1.165$Ex.1760728@storm.twcol.com>
Source record: 59610

An Rverter type interface has logic to disable interface unless you are
actually on line. If this is not done
then any disk or printer I/O will actually also get picked up by the modem.
With an Rverter the cassete
line is used for the RTS signal and also enables the interface (at least
with mine). For this reason cassette
drives can not be used with Rverter intefaces or an SX212 modem (which is
compatable). It may be
possible to use an SIO2PC cable but characters may get sent the modem during
disk i/o which if you
are on line may not hurt anything unless a modem command happens to be in
the stream. Incoming
characters may also intefere with disk i/o. I have heard of some people
using RVerter interfaces for
SIO2PC interfaces. Some SIO2PC's don't use a MAX232 but use 74Cxx series
chips. This has the
disadvantage of not producing the true RS232 output levels but usually will
work with most devices and
is a lot simpler to build (some of the signals may be inverted though).
There is also a MAX233 chip that
is similiar to the MAX232 chip but doesn;t require any external components
but they cost more and are
harder to find.

Just my 4 cents worth
Ken Siders

Alan Sharkis wrote in message <36177636.E402E11E@erols.com>...

2893. FS/T Various Atari Computer Items

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-04 00:00:00 UTC
From: Jim Lazarenko <jim_lazarenko@NOSPAM.powersurfr.com>
Message-ID: <6v9ies$sm92@dagger.videotron.ab.ca>
Source record: 59611

Updated 10/04/98

I have the following Atari 8bit related items for sale or trade. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask. I am open to reasonable offers on all items.

For items that I am taking offers on (no price listed), please make all offers in U.S. Funds (buyer pays shipping). I am also willing to trade for some rare or sealed titles for...
- Intellivision, ColecoVision, or various Atari systems
- Shrink-wrapped or mint SEARS Telegames for the Intellivision.
- Shrink-wrapped or Mint DigiPlay games for the Intellivision
- A working Intellivision Music Synthesizer
- Rarer Mattel and Coleco Handhelds.
- And of course the ever popular, original Intellivision computer :)

If you are interested please respond to jim_lazarenko@NOSPAM.powersurfr.com (removing the NOSPAM first)

Hardware Please make an offer
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 800XL No Power Supply
-Atari 600XL With Power Supply, RF Cable
-Atari 520 ST Missing all accesories
Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers
==========
- Paddles $10 a pair
- 2x Suncom Tac Joysticks $15 for the pair
- 2x Wico Joystick (Black handle, grey base) $15 for the pair
- 1x Spectravideo Joystick with suction cup base $8

Cartridges Please make an offer
==========
- Basic
- Centipede
- Defender
- Donkey Kong
- Donkey Kong Junior
- Final Legacy

- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Missle Command
- Moon Patrol
- Pole Position
- Qbert
- Realsports Football
- Robotron: 2084
- Star Raiders
- Tennis

Books and Manuals Please make an offer
==========
- Consumer's Guide "The Users Guide to the Atari"
- Compute's "Third book of Atari"
- Compute's "The Atari Basic Source Book"

Magazines and Specification sheets Please make an offer
==========
- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

North American Gaming Magazines
==========
- Computer Gaming World - December 1988
- Game Players - February/March 1989
- Game Players - June/July 1989
- Video Games & Computer Entertainment - June 1989

European Gaming Magazines
==========
- Ace - November 1989
- Ace - December 1989
- Ace - April 1990
- Computer & Video Games - August 1988
- Computer & Video Games - May 1989
- Raze - December 1990
- The Games Machine - August 1988
- The Games Machine - September 1988
- The Games Machine - June 1989

2894. Re: Bounty Bob atari 800 problmes..

Newsgroup: comp.sys.atari.8bit

Hmmm...I would be suprised if my Flight Simulator 2 cartridge was ONLY 64k.
It not only held a 48/64k game but the four-city scenery disk too...

Welcome to the comp.sys.atari.8bit newsgroup!

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

http://www.faqs.org/faqs/atari-8-bit/vendev/

ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/vendev

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, are NOT listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection. Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics, published by Bob Woolley
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

2896. Re: XF551 Repair problem

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-05 00:00:00 UTC
From: rwoolley@postoffice.pacbell.net
Message-ID: <36198F88.817A4713@postoffice.pacbell.net>
Source record: 59489

If you look closely at the 8040/8050 site on the PCB you will see a jumper for the type of CPU. One way is 8040 and the other is 8050 - it is marked on the board. It switches pin 7 so look around there.

The whole XF551 is a piece of junk - good luck.

Bob

What kind of features do you think a pc->atari keyboard insterface
should have? I have such a project finished here waiting for me to get
enough time to publish it, but I needs some features. Right now it just
does a couple keyboard layouts, function keys, and some macros.

2900. Re: what is the cp/m8000?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-05 00:00:00 UTC
From: GSB <brunergs@pcisys.net>
Message-ID: <01bdf017$3747ac40$d436e6d0@none>
Source record: 59616

That would be the ATR 8000 made by SWP. It was a interface made for
the Atari that gave the Atari new features like:
- parallel printer port with a 64K print spooler
- RS232 port
- the ability to run CPM software
- ability to hook up four regular floppy drives (5 1/4 or 8 inch)

Also, there were enhancements for the ATR 8000. A adapter called
Co-power 88. It was a IBM PC XT on a board that mounted inside the
interface. You could have up to 288K of memory and be able to run
IBM PC software or CPM-86 software.

Another enhancement was a SASI hard drive interface (pre-SCSI). This
allowed you to connect a hard drive to your Atari 800. At the time, there
was only one other (that I know of) hard drive interface for the 800, the
Corvus hard drive interface. That interface used the joystick ports to
communicate to the hard drive.

SWP also made a ATR 8500 interface. It was one that mounted inside
a floopy drive case and had the same basic features of the ATR 8000
but in a more compact version. This one didn't go far since SWP went
out of business shortly after they introduced them.

Hope this answers your question. And by the way, great find. You should
try your best to get the stuff.

Hi John,

Call me tomorrow at work: 212-325-7075, I live in Staten Island and not only would I be in on the deal, but I would come out and meet you to split up the stuff, if you've already bought the stuff, let me know, perhaps I can buy some stuff from you and you can recoup your expenses, either way, give me a call. thanks.

Curt

John,

BTW, if your looking for a 3 way split, then I'd be more then happy to buy 2/3's of it and you buy the other 1/3, again, let me know, give me a call tomorrow at work: 212-325-7075 and I'll meet you out at this guys house and we'll split it all up and make out.

John,

He's probably referring to ATR-8000 boxes, they are wonderful little interface boxes and if they have 64K of ram, they can work as CP/M systems (CP/M was a competing OS back in the early 80's to DOS, DOS won of course :), they can connect to an Atari computer and can be used as a printer, modem, floppy interface box.

Steve,

I think thats all thats really needed, keep it REALLY simple and just keep it down a simple interface board for the systems. Just ensure that the arrow keys work like the Atari CTRL+up, down, left, right and that the CTRL + ALT + DEL works like RESET (IF possible) and that you have OPTION, SELECT, START mapped to perhaps F10, F11, F12 (since F1, F2, F3 are used for CTRL+1, CTRL+2, CTRL+3 functions)

2906. NEW GAMES for JAGUAR Petition

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-05 00:00:00 UTC
From: mwcarter@my-dejanews.com
Message-ID: <6v9p3tlss1@nnrp1.dejanews.com>
Source record: 59622

Hello. As you all probably know, there is a rekindled interest in the Jaguar due to games in development such as Battlesphere, PROTECTOR, Gorf 2000, *NEXT* and the Age of Darkness. Other games, such as SkyHammer, Soul Star, Hyper Force, etc. rest in a state of limbo as they are completed, but publishers, such as Telegames and ICD may not feel the effort is worth the risk involved.

Enter the NEW GAMES FOR JAGUAR Petition.

The first Jaguar Games Petition (thanks to Steve Scavone) was an intregal part in letting Telegames know that they was an interest in further Jag publishing, and as a result, we have Zero 5, Iron Soldier 2 (CD and Ltd. Cart. Edition), WORMS (Ltd.), Towers II, World Tour Racing and Breakout 2000. ICD also got into the act with Aircars.

The problem is, that was then. Now we need to let the prospective publishers know that the interest is still there, the user base is still there, the MONEY is still there. Want to let publishers and developers know this? "SIGN" the Petition.

Just go to:

http://home.sprynet.com/sprynet/mwcarter/petition.htm

Or if you don't want the hassle, just send an e-mail to:

jaguar_games@nextgenfan.com

Including the following information:

Subject: New Jaguar Games

Body:
YES!
Your Name
Location

Thanks for your time, and let's get this moving.

Marshall W. Carter

Having a car accident and suffering an emotional shock is one thing.
Constantly lying on the phone, not answering letters, being obscene and DELIBERATELY screwing people (in short, being a parasite) has nothing to do with what happened to you before.
Just a reminder: you also got some very bad publicity in Top Magazin and The Grim Reaper (two Atari diskmags) confirming my statement.
The rest of my answer is in your mailbox.

Oh, the "cheese screen" is what Computer Gaming World calls the little
fanfare at the end of completing a game. I guess it refers to a mouse
making it through the maze and getting to the cheese :)

Alot of those old games had good endings, but a couple were real
disappointments. What were some that you remember?

My personal worst was:

Attack at EP-CYG-4: After you wiped the planet clean, the game just kept
going, nothing left to shoot. Supposedly, you just traveled eons
through space, saved the planet Earth, and wiped out an alien
civilization! You think they would at least say you finished it :)

Supossedly he does. I remember he asked for a copy of the original to
include with the new version, he wanted an emulated one but without
the roms on it to include for nostalgic purposes. Sadly, the new
version is simply dukenukem 3d style game.

I just thought of another indirect one, although I might be wrong. In STAR TREK III, listen to the chirping sound when the communicators are activated. It sounds suspiciously like the fast clicking of an Atari 800 when the keyboard is used.

Probably the best emulator is CCS64. A *fast* and free emulator is PC64 DOS
(not supported any more, but should be good enough for BC's quest for tires
and Grog's revenge. Also runs under windows).

Get the latest beta version of CCS64 from
http://www.computerbrains.com/ccs64down.htm

As for PC64, do a websearch on Alta Vista.

As for games:

ftp://arnold.c64.org/pub/games
http://www.geocities.com/SiliconValley/Vista/3468/c64index.htm
http://ltd.simplenet.com/c64/found.html

I'm trying to make a functional XF from some other XF parts.

I have have two different processors, the 8040 and the 8050. What is the difference. Because when i try to place a 8040 in a board where a 8050 was, the drive won't function.

Are there other problems with the XF, or are there parts that quickly broke?

Louis

Go to the below links to see the pinouts:

For the 8040
http://www.mitronet.com/chipdir/giicm/8040.txt

For the 8050
http://www.mitronet.com/chipdir/giicm/8050.txt

They look the same on a pin out scheme. I did as good
of search for them but can up with nothing.

The only thing I can think of is maybe there's a difference
with one having more bytes of RAM than the other. Or
maybe you have variations that don't use external ROM.

Are you using the actual National Semiconductor chip?

For me, it has got to be Hardball, because I pitched a no-hitter in late 1986. It wasn't a perfect game, because I had to intentionally walk a couple of sluggers to maintain the no-no. I remember sweating bullets as the game progressed and was lucky on a great outfield catch and a very close double-play ball. For all my efforts, the game just ended normally. No congratulations, no celebration! I wish programmers had taken that into consideration. Many games were like that, it seems.

Incidentally, the pitcher I used was Tommy Euler. He was a longtime favorite of mine out of the bullpen, and that day I decided to use him as a starter. It paid off, eh? Another game that I had similar frustrations with was Earl Weaver Baseball II on the PC. I managed the game and got a no-hitter, but all I got was the proverbial "game over" once again...

Steve, This may be totally opposite of your project, but since it is atari and pc keyboard related, how hard would it be to connect an atari joystick to the pc keyboard. Does any of your project encompass this kind of modification. I think it would be great for the emulators, which I use in conjunction with my real 800, and it might even be helpful with the atari. Maybe it could be a way to get 4 joysticks on an 800xl, two in the joystick ports, and 2 hooked to the keyboard. I think some games would have to be modified to handle keyboard(joystick) input, but anything's possible. Right??

2925. JAM with PAL XL?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-06 00:00:00 UTC
From: atari8man@aol.com
Message-ID: <19981006010212.11771.00007284@ng-fa1.aol.com>
Source record: 59493

Has anyone tryed to use the JAM with an XL/E that has an ANTIC PAL chip?
Im wondering if the VGA monitor would roll? out of controll?
All my machines have the ANTIC pal and the Super Video upgrade and Im going to
get a few of thes JAM devices but Im concerned about Pal compatiblilty?

If you mean have a joystick send keystrokes to a PC so an emulator would think
your pressing keys, its possible. One approach would be to just open up
a keyboard and wire the joystick to short the key-switches for each of the
keys you want, and let the keyboard do the work.

Otherwise you would need to rig a keyboard encoder to a joystick to make the
PC think the joystick is a keyboard. This could easily be accomplished
with a single PIC-like device, havent tried it though. You would lose
the keyboard itself w/ this method.

Personally I would just open a keyboard and make the required connections,
that way you at least get to use the keyboard as well.

Yes, that's what I meant. I might just try wiring in a db9 connector so that
I can plug in the joystick whenever I want to. Off topic, but any word on
using PRO images with the emulators?

I don't think it has to be all that big. Isn't it better to do it with
hardware? Instead of using an interface wich requires a special
driver?
Programs that boots from disk don't load that driver, so you're
keyboard is useless.

Hi Alan,

I've just created a new executable and placed it in the usual place. I ripped out the event handler for the comm device, and replaced it with a new routine. Give it a try if you like, and let me know how it works.

Thanks,
Tom

It's 4.19, which I just did. A couple of fixes for stuff identifed by Bo and Ernest Schruers, the CD Pooldisk guys. The last one I actually put out was 4.17. I'll be getting 4.19 out pretty quick. I don't currently have a web site or FTP site, so I can email it to you if you'd like.

Let me show how out of touch I am: I don't know what RVertor is.

I'd be interested myself - I bought one of the early ones. Worked pretty
well, and had some nice utility stuff in ROM, too.

I suppose I ought to re-install the sucker - see if it still works...

My project uses an atmel microcontroller to talk to the PC keyboard and
interfaces to the scan circuit on the Atari side. It looks like the real
keyboard matrix to the pokey, so its compatible with everything. The original
keyboard can still be used as well since both circuits are normally open.

FWIW, I have 3 551's that work flawlessly.
I have a 130/320 XE that has worked
flawlessly since about '85 or so. I certainly
understand the issue of the thin traces, etc.,
but Atari didn't design this line with hacking
in mind. The keyboards, however...

If you are just looking for something to work in an atari you can use a sega genesis joystick. One of my favorite's to use is the sega master system control stick. There are places on the web when you can buy old atari sticks and replacement parts.

I'd like to receive 4.19 when it's ready. Thanks!

About the RVerter -- It was a commercial product that built an RS-232 interface into a cable (with no "box" in the middle of the cable.) I think the company also produced a similar printer interface. Many clone designs for the RS-232 version have come out, and some of the guys here have been saying that a modified SIO2PC cable would also work.

Yeah, I'll say!

I never had trace or pad problems with the keyboard on my 130XE, but the spacebar would "jump out" almost constantly until the entire assembly was replaced. And talk about mushy feel! The Best kit helped a little, but it's still somewhat like typing on a pillow. My XF551 has also served me very well. But I never disconnect the SIO cable from it!

LWhite6497 wrote:

2958. Announcing The Atari 8-bit Computer WebRing

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-07 00:00:00 UTC
From: Raphael James Espino <rje@co.umist.ac.uk>
Message-ID: <v7y1zokzdrr.fsf@co.umist.ac.uk>
Source record: 59525

Hi all,
The Atari 8-bit Computer WebRing is finally here, and ready to go.
All it needs now is for some more people with Atari 8-bit related
webpages to join. Joining instructions can be found at

http://www.geocities.com/SiliconValley/Lakes/7953/a8ring.html

but basically what you have to do to join is fill out the form at the
above page, put one of the available webring links on your page (go
take a look at:
http://www.geocities.com/SiliconValley/Lakes/7953/a8wrlink.html), and
give me a day (or two) to add you page to the ring. And that's it.

To qualify all you need is a webpage with Atari 8-bit content, be it
emulators or the real thing, again, there's more info on the page
above. So come on then, all that's stopping this webring from taking
off is your contribution =)

For those of you that don't know what a webring is, it is also
explained on the above page, but basically, its a way of linking
together related webpages (in this case pages about the Atari 8bit).
The idea is that the first page in the ring links to the second, the
second to the third, the third to the fourth, and so on, with the last
linking back to the first. By joining the ring you webpage will be
easier to find by people browsing the web. You only have to find one
page in the ring to be able to jump all the rest. Pages in the ring
have some HTML code (which is provided for you) which automatically
does the linking between pages, so once the HTML link is on your page, you
don't have to worry about updating it.

Any questions, just mail me at the address below.

It should work just fine in DOS 2.5, as long as you remove the copy
protection. It works well with MyDos. I have had some problems with
it and TextPro though. If the last thing I do in TextPro is a save,
then exit to Dos, run AMAC and try to assemble something, using a real
disk drive, it will give a disk error. Try to assemble the same file a
second time and it all works OK. It also works fine if the last thing
I do in TextPro isn't a save. It will also work fine with a ramdisk.

Has anyone else come across this problem? I'm guessing it's got
something to do with the disk I/O buffers. Either the TextPro save
isn't cleaning up properly after itself, or AMAC doesn't initialise
something properly at start up. I haven't tried increasing the number
of buffers yet, that might be worth a go.

Perhaps these are ATR-8000s? This was a board that had a Z-80 CPU and floppy disk controller. It could control up to 4 floppy drives for the Atari, or it could run CP/M using an Atari or a standard serial terminal. There was an optional hard-disk board and even an optional 8088 board that could run MS-DOS. If he really has several of those, with or without the add-on boards, you could easily sell them on the net.

I never thought there would be copy protection on it. I just assumed since
it
was a early Atari computer product that they never updated it and drop
support for it.

Do you still have any info on what you did to patch it?

SS tt eeeeee ll ll aaaaa -- "An Atari 2600 VCS Emulator"
SS SS tt ee ll ll aa aa
SSSS ttt eeeee llll llll aaaaa

================================================================================
Release 1.0 for DOS, Linux, and Unix
================================================================================

The Atari 2600 Video Computer System (VCS), introduced in 1977, was the most
popular home video game system of the early 1980's. Now you can enjoy all of
your favorite Atari 2600 games on your PC thanks to Stella!

Stella is a multi-platform Atari 2600 VCS emulator written in C++. Stella
allows you to play most of the games written for the Atari 2600 including
Supercharger games.

This is the 1.0 release of Stella for DOS, Linux, and Unix. Distributions
for other operating systems will appear as they become available. The three
distributions currently available are:

* Binary distribution for Linux (stella-1.0-linux.tar.gz)

* Binary distribution for DOS (st10.zip)

* Source code distribution for Unix and DOS (stella-1.0-src.tar.gz)

A few 2600 ROM images, BIN files, are included with these distributions.
BEYOND THESE FILES NONE OF THE DISTRIBUTIONS CONTAIN ANY 2600 ROM IMAGES.
PLEASE DON'T WRITE ASKING FOR ROMS BECAUSE THEY ARE COPYRIGHTED! If you
own any of the Atari 2600 Action Packs by Activision you can use the ROM
images from it with Stella.

New in this Release
==================

* Supports Robot Tank and Decathlon

* Supports Joystick, Keyboard, Booster Grip, and Indy 500 Driving
controllers

* DOS version supports 320x200 and 320x240 graphics modes

* Preliminary support for Chris Wilkson's Megacart bank-switching scheme
```

* Improved graphics emulation (TIA)

* Improved timer emulation (6532 PIA)

* Improved CPU emulation (6502)

* Improved Supercharger support

Distribution Site
=================

The Stella distributions can be obtained from the Stella home page at:

http://www.classicgaming.com/stella/

If for some reason you are unable to connect to this page please try
again later.

Source record: 59536

Hiya Folks. I'm so glad I found this newsgroup.

This may be another "mother lode", if anyone is interested. Over the years I've collected four complete 800 systems and one 800XL, including disk drives (4 810, 1 1050), three printers (Atari 825, Epson MX-80, and Legend 880), two 850's, two modems (one 830, one Anchor), lots of joysticks, paddles and whatever. And an absolute shitload of software. All of this stuff actually works, I checked it myself. I also have some original brochures and literature.

My original 800 was a great system, I actually used it to maintain a mailing list for a newsletter and made some good money with it. Alas, I am a Macintosh person now (from one outcast platform to another).

I'd like to part with all of this stuff in one fell swoop, and will entertain any reasonable offer.

I'm just outside Philadelphia, PA.

Write me at ConnieMerr@earthlink.com.

Thanks,
Connie

>distributed beyond my high school...If I ever get AnaDisk to dump it to PC
>then I'll post it somewhere...

Actually, there is a game written for the A8s that's exactly like this. I
can't remember the name at the moment (Devil's Mountain?), but it was one of
those type-in BASIC programs from Compute! magazine. I can remember my friend
and I taking turns entering all those lines of code (tons of DATA statements!)
for a few days, and of course, ending up with lot's of errors! :^)
But eventually, we got it working, and it was a very entertaining game!

I still have it packed away with my 800XL too. I could upload it to an FTP
site as soon as I figure out the best way to transfer this stuff to my
Falcon's hard drive...

And I recently took out the old 800XL and Percom Data floppy drive that I
originally bought back in 1983, and it all still works. Of course, I had made
backups of just about everything back in 1991 (as I had the 8-bit set up for a
while then), and when I re-packed it away, I made sure those floppies stayed
dry and clean.

Anyway, I've got a ton of stuff that I'd like to transfer to my Falcon for
upload to ftp (and just for safe keeping). And I'd also like to transfer
quite a few Text Wizard word processing files as well.

By the way, I used to have quite the A8 collection (several 800XLs, a 130XE,
800, Happy 810s and 1050s, Rana 1000s, 1025 and Axiom printers, etc.), but now
it's just the 800XL (actually 2, but one is dead), 1 Percom drive, 1 SX-212
modem, a few bits and pieces, and tons of software. And no, I'm not selling
any of it! :^P

I also have a somewhat large collection of ORIGINAL programs that I created
back in the early/mid eighties. A lot of little games and demos and such -
some of them quite enjoyable if I do say so myself! I'd love to share these
with the A8 crowd here as well. Again, I just need to transfer the files to
my Falcon. I know I could do this with term programs/modems, I just need to
set aside the time to do it. And it will be soon, as the first major hurdle
has already been crossed - which was digging the 8-bit stuff out of my
parent's garage! (and while I was there, I also revisited my Intellivision
and ColecoVision collections).

Anyway, it's probably in the FAQ, but when I do get the files onto my Falcon,
what are some good FTP sites to upload Atari 8-bit software to?

2974. Miscellaneous stuff for sale

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-08 00:00:00 UTC
From: Eric Sokolowsky <esok@seal.cs.byu.edu>
Message-ID: <Pine.SGI.3.94.981008160259.24897E-100000@seal.cs.byu.edu>
Source record: 59442

I have the following for sale:

Atari XDM811 printer (I'm not entirely sure that's the correct model number)
$15 + shipping

This is a daisy-wheel printer made for Atari that replaced the 1027. It
uses a more standard typewriter ribbon that should still be available
at office supply stores. It comes with a partially-used ribbon. It worked
when I plugged it in a few months ago.

Atari Speed Reading - cassettes and workbook
$5 + shipping

Atari 1027 Power supply and manual
$5 + shipping

This brick is the nonstandard one used for the 1027. I no longer have
the printer and so no longer need the power supply or manual.

Please e-mail me offers.
esok@cs.byu.edu

2975. FS: Bundles of software/hardware

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-08 00:00:00 UTC

Message-ID: <361D4CA2.643842C2@cyou.com>
Source record: 59443

I am getting rid of some Atari 8-bit software. To avoid having to deal with many trips to
the postoffice to send out single items, I am bundling the software into 4 packages. I was
asking $25 for each bundle (this price includes shipping cost), but since that didn't seem to stir up any interest, I am knocking it down to $20... which still includes shipping. If they don't sell at that price, I know a good landfill that will gladly take them! :-)

Bundle #1
Atari BASIC Book (Albrecht, Finkel, and Brown)
Atari Basic Ref. Manual
Atari Basic Cart
Microsoft Basic (Box/Docs)
Microprint Printer Interface
Flight Simulator II (Box/Docs)
Scenery Disk 5 (Box/Docs)
Star Scenry Disk - San Fran and Bay Area (Box/Docs)

Bundle #2
Star Fleet I (Box/Docs)
Animation Station (Drawing Pad/Box/Docs)
Decision in the Desert
Ghost Hunter (Cassette) - (Box/Docs)
Ninja (Box/Docs)
LA Swat/Panther
Tobot/Bros (Box/Docs)

Bundle #3
Drag (Box/Docs)
F-15 Strike Eagle (Box/Docs)
Access Triple Pack - Raid over Moscow, Beach Head, and Beach Head II (Box/Docs)
Party Quiz - 4 player trivia (Controller/Box/Docs)
Graphix AT - Printer Interface (Docs)
Centipede Cart
Galaxian Cart

Bundle #4
Gauntlet (Box/Docs)
TrailBlazer (Box/Docs)
Infiltrator (Box/Docs)
Run for the Money (Box/Docs)
Super Huey (Box/Docs)
Meltdown (Box/Docs)

Elektraglide (Box/Docs)
Temple of Apshai (Box/Docs)
Orbit - A Trip to the Moon (Box/Docs)

1 Atari 800, 48k stock, with Basic Cartridge, power supply gurnateed 30 days +, $20.00 price includes shipping due to the weight.

1 Atari 810 Disk Drive, stock, comes with power supply, and sio cable $15.00 shipping includes.

1 Rana Disk Drive. comes with power supply and sio cable $15.00 shipped, this drive is the only disk drive that will format a disk without a computer being attached. It has all the features, single density, density and 1/2, and double density. It does have a Mech, that will not run all of the Atari Programs, like flight simulator ii and heavy protected stuff but generally it is/was a good drive.

XM301 Direct Connect modem (300 baud) with box and instructions, make offer..some BBS's still accept this baud rate, Mine does!

Message-ID: <361D4CCE.ABF896C5@hotspam.com>
Source record: 59446

Hi,

My AtariAmp skin for Winamp (the Windows 95 Mp3 music player) is now available on
their website, at http://winamp.com/htdocs/Computer-1.html . The version online is newer
and nicer-looking than anything I sent anyone, so it's worth a look even if you've already
got it.

Most of the text and character graphics were done using Atari800Win and messing
around in text mode.

It got a 4-star rating, despite the relatively dull looks (ie nothing 3D, shaded, etc)!

Itay.
good to see you.
And I sorta don't know what you're talking about, sorta think
I do.
I didn't go to your site. I went to the winamp.com site.
I saw your 'skin' listed. I pointed and clicked and did
all sorts of stuff. I guess your AtariAmp WinAmp Skin is
a 'snapshot' of some A8 screen, complete with sound and
A8 graphics.
The thing is, I don't want to download WinAmp. Its a
MP3 video and audio player I guess (am I right?).
I download stuff, get near the end of an hour and 10 minutes
of download and my ISP, or the site, hangs me up. Too slow
at 14.4k. OR, I get real audio, real video, real olfaction,
real feel or whatever, and in two weeks it says 'register
and pay or this junk won't work and your stuck with it
sitting there on your hard drive forever.'
I dunno Itay.
Russ

2981. An awesome TRANSLATOR

Newsgroup: comp.sys.atari.8bit

From: jmelbo@pressenter.com
Message-ID: <361d8334.39762429@news.pressenter.com>
Source record: 59449

Hi all. I finally found the most awesome 'xl translator' in my old collection of stuff. It was written by a guy named Tim Patrick (The Happy Hacker). It is a load file solution so is more convenient. It even lets you run 400/800 only cassettes and cartridges!! Yeah. I remember running the Demon Attack cartridge with it on my 800XL. It works!

2982. Atari 800xl,130xe,1050 drive & tape drive problem

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-09 00:00:00 UTC
From: sven6@my-dejanews.com
Message-ID: <6vjt5i$n0d$1@nnrp1.dejanews.com>
Source record: 59450

I don't know what happened to my 800xl & 130xe. When I turn on my 130xe, all it shows is a white screen, the power light is still on though. When I turn on my 800xl, only a blank screen is shown, even though the power light is on.

I have three 1050 drives, one of them is broken. I also have an datasette, but the play button doesn't work, I don't know if the Record button works.

What are the causes of these problems and how can I fix these problems, if I can't fix them, who can I send them to so they can get fix. Please e-mail me?

Plus, does anyone have a disk for the 850?

Message-ID: <361dba06.1692282@news.hannover.sgh-net.de>
Source record: 59452

Hi folks!

A friend of mine and me we want to program a game. The clue is, we want to make a multilink-game. We want to link more than two ataris together. Has anyone an idea for realise thid idea?

We don't want using very much new hardware. We wanted to it only with a cable... if it's working...

The first idea was to do it via SIO. Is there any possibility (we don't worked out the idea...)

The second idea was to do it via Joyports. But on an XL you only have two!!! And you can switch both to sending or to receiving... And you must link all XLs in a WebRing... Perhaps it is too slow.

Has anyone experiences with that kind of problem? Perhaps you can do it via the Card-Port?

I'm glad about some hints!

Bye

Hi there,
You might want to look into the Game Link II, which connect
computers via the SIO port. You can find some more info at:

http://www.geocities.com/SunsetStrip/Alley/1878/hard_faq.htm#ogl2

Also, there was some discussion about the Game Link II a while back on
this news group. You'll be able to find those messages if you go to
deja news:

http://www.dejanews.com/home_ps.shtml

and do a search for GameLink in comp.sys.atari.8bit over the last
couple of years.

Hope that helps some.

>Does anyone know where I can get comprehensive documentation on Atari Basic?

Lots of info available. I still believe that one
of the best references/tutorials is "Your
Atari Computer" by Lon Poole, et.al.
They are very available. The Atari Basic
Source Book is probably overkill for 99.9%
of users, but contains a wealth of in-depth
knowledge. (Bill Wilkinson in Compute! Books) The XL Users Guide by Weber
Systems is also pretty good. Many books written about Atari Basic - most are
quite
introductory. I wonder if any texts were
ever written about Turbo Basic? And Atari
Microsoft Basic? Check with Ben at Bravo
Sierra Computers. He posts an ad. here about
every week or so. He has quite a few books.

2998. Re: Movies Sponsored by Atari

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-10 00:00:00 UTC
From: GSB <brunergs@pcisys.net>
Message-ID: <01bdf42b$6c7dd980$ec07cccf@none>
Source record: 59466

Just saw one tonight. Sci-Fi channel was playing Child's Play 3.
There was this young kid who was in a military school chow-hall
who was playing a hand held game system. I recognized it as a
Lynx but wasn't quite sure (could've been a Game Gear). But when
me and my son heard the sound effects, that confirmed it. You
could hear him playing Gates of Zendocon and he was playing the
first level.

It's amazing how your mind just tunes into things like that!!

It's just an audio player.

>real feel or whatever, and in two weeks it says 'register
>and pay or this junk won't work and your stuck with it
>sitting there on your hard drive forever.'

It won't do that. It is Shareware, but without ANY nags or cripples. I
registered it, though, it's worth the $10.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

3013. The 9th Adventurers Convention (UK)

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-10 00:00:00 UTC
From: Larry Horsfield <Alaric@larryhorsfield.demon.co.uk>
Message-ID: <FFmxasADy7H2Ewpn@larryhorsfield.demon.co.uk>
Source record: 59481

Any adventure fans in this NG, please read on:

This is the final reminder about the 9th Adventurers Convention, being held in Birmingham (UK) in two weeks time.

The event is being held on Saturday, 24th October, in the Ariel Suite of the Royal Angus Thistle Hotel, St. Chad`s, Birmingham B4, which at the end of the A38M and easy to get to from all parts of the country. It runs from 9am to around 6pm and covers all formats from Spectrums to PC`s. Tables are available if you wish to bring along your own computer(s) and we actively encourage this as we depend on those attending to bring their computers, so the more the merrier! If you wish to bring hardware and/or software to sell you are more than welcome to, but no pirated software please!

The event attracts adventure enthusiasts from all over the UK, including Northern Ireland, and the atmosphere is very friendly and informal. Many of us stay overnight at the hotel and the evenings can be just as lively and interesting as the convention itself! We have yet to welcome anyone from outside the UK, but we live hope!

During the day we have the popular "Megapoints" competition running. In this the contestants get 20 minutes playing time at a specially written Spectrum text adventure, with the object of scoring as many points as possible in the alloted time. There are usually cash prizes and special certificates for the 3 highest scores. The adventure this year has been written by Ulsterman Jon Scott, author of various Spectrum text adventures published by Zenobi Software.

Tickets are available at 6 ukp per person from the address below, or you may pay at the door on the day if you wish.

Vicky Jackson, 128 Merton Hall Road, Wimbledon, London, SW19 3PZ

Please make cheques/PO`s payable to V. Jackson

* * * * * * * *

HOTEL ACCOMMODATION:

The Royal Angus Thistle Hotel has special room rates for those attending the Convention. These include full English breakfast and are as follows:

Single Room: 37.50 ukp per night.

Double/Twin: 32.50 per person, per night.

Please contact the hotel to book your accommodation, NOT the convention organisers. The address and phone number are:

Royal Angus Thistle Hotel, St.Chad`s, Queensway, Birmingham, B4 6HY

Telephone: 0121-236-4211

Don`t forget to inform the hotel you are attending the Adventurers Convention, otherwise you will be charged the normal room rates!

If you have any queries about the Convention, or would like to reserve tables for your hard/software, please contact me at the email address below.

Hope to see you in Brum on the 24th!

Thank you for your efforts, yes everyone knows of this person/product that has been arround for any time at all. A 400 computer with docs would cost about $20.00 maximum including shipping and handling in todays market.

I have a 400 with 48K upgraded, and an upgraded keyboard that will go for $25.00 including shipping and basic cartridge. So when somone comes off with the original price of $499.00..who cares we all know it will never sell at anywhere near this price..now if he lowers it to $5.00 plus s/h then the comunity needs to be warned!..But thank you for your efforts as I am sure there are a few new users in the area that do not konw what he is/does.

Howdy Louis

(Let's do this in English)

I read you message about the stuff ANG is selling. Do you guys still have replacement/spare parts for the eight bit Atari?

I might need the co61618 chip real soon. This is the MMU (memory management Unit). Please don't mistake it for the co25953 (the XE gate array/PAL), or te Freddy chip.

I might also need a PIA.

Please answer here or at nisse-ma AT reze-1.rz.rwth-aachen.de (as soon as possible, PLEASE???)

No, I'm afraid that is not possible. A 2600 will play 2600 carts of
course, or any of those clones that were made of it. Also, an Atari
7800 game system will play 2600 carts as well. Not sure if it
requires a special adapter though. But no, an XE game system will not
do 2600 carts, but WILL do carts for the XL/XE line of Atari computers
and most carts made for the 400/800 Atari computers.

Source record: 59347

I just visited a web site that contained a whole 1050 Speedy mini-manual in German. It evidently was sold by the Compy Shop. It had a schematic and it looks like it is a modification to a stock 1050 that still uses the 6507, rather than a 6502 as used in Happy's. Anybody know anything about this device/upgrade?
I'm always curious about A8 hardware upgrades.

Date: 1998-10-11 00:00:00 UTC
From: Gareth Horton <gaf@gafshouse.u-net.com>
Message-ID: <3620EB38.MD-0.182.gaf@gafshouse.u-net.com>
Source record: 59352

I've just got hold of an Atari 65XE computer along with a
XC12 tape deck, both are in perfect condition.

As i've never used an Atari of any description before i'm
really struggling to get any use out of it. Does anyone know if
the 65XE manual is available to download from the Internet? I
have various FAQs but none of them cover the 65XE in great detail.
Any help or suggestions would be much appreciated.

I have a similar symptom with one of my 1050's. When turned on the
power light comes on but the drive doesn't spin up. If I turn it off
and retry a couple of times it comes around for me.

I suppose one of these days it won't come around and will stay dead.

Larry, no one was talking about emualtors in this thread. The original poster wanted to know if an XE game system could play 2600 carts. As far as the emulator scene, there are 2600 emulators (I know of at least one called STELLA). There are emulators out there for a lot of machines now. Atari 8-bit, Atari ST, Apple II, Apple Mac, CBM 64, Atari 2600, Atari 5200, many arcade machines, etc.

Hi Bob,

The PC-3 uses an MFM controller and came with a Seagate ST-225 40MB hard drive. You can buy standard ISA bus IDE controllers and then use many IDE hard drives, however be warned, most likely the BIOS on the Atari PC's is not going to like Hard Drives with more then 1023 cylinders so try to stick around the 1GB or small range, some hard drives come with LBA BIOS loaders so that you can go past the 1023 mark and use 2GB or higher hard drives.

My friend gave me his Atari 800, and it works great-- except the keyboard is dead. A couple random characters might show up if I pound on it long enough, but the characters don't correspond to the keys pressed. SysReset, Option, Select, and Start work fine, though.

Any troubleshooting tips would be appreciated.

Thanks,
Steve

I'm one of the programmers on the GameLink II that R. J. Espino talks about. A simple cable (made of paper clips and rubber bands) works for two machines, using SIO. The concept should work up to 8 Ataris if active components are added to boost the signal levels (I have gotten three to work somewhat reliably without active components). I have posted source code (in Action!) and schematics on the Atari8-l mailing list (Bill Kendrick was going to use this to create new games - where the heck are you?). I can repeat them here if anyone is interested. The system works at least as fast as 32kbps.

Jeff Potter

```
(John asks about getting a directory from BASIC, etc.)
Most of those disks you have are probably boot disks. The
only way to run them is to insert disk, turn on computer
(hold OPTION if XL/XE). It will load and run from there.
If you have some binary/obj/com type stuff on disk to
run, some will run with the DOS L command, give the
filename.ext when prompted.
Some will not run from DOS utility menu, meaning the
programs conflict with DOS. Those must be loaded from
'special' boot loader disks.
But for browsing your disks, just to see what's on them
a simple BASIC program will do. (I'll probably mess this up.)
10 DIM A$(100)
20 CLOSE #1
30 OPEN #1,6,0,"D1:*.*"
40 INPUT #1,A$
50 ? A$
60 GOTO 40
save this to disk as SAVE "D:DIR.BAS".
then you can use it with:
RUN "D:DIR.BAS"
Russ
```

3046. Re: how do you use this thing???

ANTIC featured a little program (I think from 1985) that allowed you to see a directory from DOS, without needing that MEM.SAV thing. I forgot which issue it was, but it was designed to be slick and convenient. Meaning, if you wanted to see the directory, you would type ENTER "D:DIR.BAS" and you'd get the contents. But since there were no line numbers to the program, it wouldn't conflict with anything you were working with. It was sort of like a batch file in that regard.

My Adobe Acrobat has problems crashing while trying to print to my laser printer. I redirect it to a file and it prints fine. I then open up a DOS box and use "COPY FILENAME.EXT LPTx /b" to print.

I'm shure you can get a shematic at the ABBUC. But I think you must be
a member of it. Try to contact Wolfgang Burger (wburger@t-online.de).
The ABBUC has a repairing-service, too.

Yes, it's like a mouse but it's incomptible to ST and AMIGA-Mouse. But
it has two modes: the Trackball-Mode, which is like a mouse, and the
Joystick-mode, so you can play games, that requires a Joystick, with
the trackball!

>
>Jeff Potter

Oh, yes. I'm would be glad if you repeat it here. Perhaps we decide
for SIO. But we don't wanted to use a GameLink for much money. But
yours is very fast, isn't it?

In the moment we will try it via the Joyports. I thought you cann only
switch Port 1 und 2 to Output or Input. (I don't know why I thought
it...) But you can switch each byte to output or input. So, in Port 1
is the Joystick and in Port 2 the multilink-cable. You have a
2-bit-send- and a 2-bit receive line. In the moment it's all theory
but I hope the speed is OK for our project.

We are two guys of the HAR. Do you know them? It's an ABBUC Regional
Group from Hannover. I found it for five years (I think). One of our
members is Stefan Dorndorf who reworks his QMEG and now the QMEG+ 4.0
is out. It's very great.

Creature XL and me wanted to program a game. We've released some demos
but they aren't really great. The most are pre-releases. They all are
planned as megademos but the time was too short to release the whole
demo on for example the JHV. We wanted to program a JHV-Demo last year
but we only had done three parts. And they aren't linked... I hope the
game will be released.

I would be glad if you could be repeat the stuff about the GameLink
II. Is it freeware? I never heard about this before. I think more
people are interested in it. I could translate it in German and
released it in the ABBUC-magazine and it gets popular.

Thanks for all your great PMs about this subject.

Understood. Just a question. PC Emulators
for 2600's are very large, and must be run on
powerful PC's to work well. But the A8 would
seem to be similar enough to the 2600 that it
might be possible. That's just my speculation,
however.

I espically agree on Your Atari Computer, not only does it cover the
BASIC and the DOS commands it gets into some of the machine details and
is very well written. Later printings include an appendix on the 'XL'
models.

Lou,

Sams Computerfacts lists L6 as an RF choke, no value or part number is given. It stops RF from going back into the power supply. Check it with an ohm meter to see if it survived (should have a low ohm reading). Check C43, a 47uf cap if it's shorted then that's the problem. It's a decoupling cap used to pass RF to ground to help keep the RF out of the power supply. If it's not that then Q6 is the most likely cause. It's a TIP110. Replace it with an NTE261, ECG261, SK3180/263 (RCA) or 121-Z9085 (Zenith).
Good luck.

3065. APE and SIO2PC problem with IBM PS/2 mod 70

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-12 00:00:00 UTC
From: 8bitz@my-dejanews.com
Message-ID: <6vsvu5mv1@nnrp1.dejanews.com>
Source record: 59380

Hello. Anybody have any insight as to why an SIO2PC setup would work perfectly on a pentium but not on a PS/2 mod 70 (386DX20) ? The only difference I can see is the pentium has a DB9 and the 386 a DB25. I have tested the 386 with a modem and a term program running with the atari plugged in and booted shows the SIO boot characters. But both APE116 and SIO2PC show no activity. I know this is probably something small but having a 3 week old baby with his wonderful sleep patterns has caused my brain to um, something :) Any help would be appreciated. Thanks Mark

I would guess that REAL6 is used because Atari's floating point number
format uses 6 bytes, and code for manipulating those kind of numbers
is already built in to the OS, and Amac would have to add only minimal
support code. This is only a guess.

Hi,

This problem commonly occurs when sections of the printer circuit board underneath
the keyboard get damaged or worn out over time. This happened to me once on an Atari
8bit machine. I simply took it apart, and using a continuity tester (or a simple meter) checked various parts of the board until I found 2 spots where the line was electrically
broken. Be aware that the the naked eye, the circuit can often appear uncut ! I then
got some liquid metal contact stuff ! (you can find this in automotive stores to fix cut
rear window defoggers) and the key board worked great ! Keep in mind, however, that
in your case, there is a possibility that it's something electronic ?

Goodluck.

Okay... first of all there is no directory capability from Atari
BASIC. There are 3rd party BASICs out there that support that, as
well as utilities which give the capability to Atari BASIC. Without
these solutions, you must go to dos to use a directory function.
Simply enter the command "DOS" from within BASIC and you will go to
DOS. What you get when you get into DOS is entirely dependent upon
what DOS you are using. Atari DOS 2.x takes you to the disk utility
package and menu. Item A is directory listing. Item B is run
cartridge (usually BASIC). To run a BASIC program from BASIC use the
command "RUN "Dx:PROGRAM.BAS"" where x is the drive number.
Similarily you could use "LOAD" instead of "RUN" and it would simply
load the program. Once LOADed, you could LIST it or RUN it. I'm sure
you know some BASIC commands like these. Atari BASIC files usually
have an extension of .BAS.

To run machine executable files (.OBJ .BIN .EXE .COM) usually, use the
L option from DOS. You may have to disable the BASIC to run some of
these. But then, some of them require BASIC be present even though
you don't run it from there because some routines are accessed by the
program. Then some machine code programs don't care at all if BASIC
is enabled or disabled on the machine.

I used to use the MadMac cross assembler on an Atari ST to write things for the XL. The resulting binary could then be chucked (by printing it!) across using an ST parallel port to XL serial ports cable.

The assembler itself wasn't to bad (I think it had local labels for example) and of course quicker for development. I haven't tried this from DOS yet using another assembler and printing the file, but I think there should be no problems here. If I can get CC65 working then I might try it again (there were a few assumptions about the size of pointers that needs to be ironed out when compiling on a PC).

BTW: Win95 has the option to 'save to file' when printing. But how do you send the file to the printer at a later date?! Open a DOS box and redirect it to LPT1? Any ideas?

Mark.

How about dragging the file to the printer's icon in the systray?
Maybe that would work?

Yeah that will work, but that is actually a small program to do it and
not an immediate mode command. I give you credit for pointing it out
but I chose not to mention it because I feared it would be
uneccessarily complicated for such a novice.

Try Best Electronics (US) at 408-243-6950. They list a 65XE manual with BASIC reference (CB101701) and XC12 schematic (CB102965) in their catalog.

Atari BASIC, which is built into your 65XE, is rather generic and if you know anything about BASIC can probably get some commands to work. You might know how to print to the screen or make math calculations. Immediate mode is where you type a command like PRINT 4+3 [RETURN] and the computer will return 7. If you use a line number (programmed or deferred mode) like 100 PRINT 4+3 [RETURN] then type RUN [RETURN] the computer will print 7.

To save a BASIC program type CSAVE [RETURN]. The speaker should beep twice. Press the PLAY and RECORD buttons on the tape unit and tap the RETURN key. The BASIC program should save to the cassette. To reload it, type NEW [RETURN] to erase the program from memory. Cue the tape to the _exact_ beginning. Press the PLAY button. Type CLOAD [RETURN]. The speaker should beep once. Tap RETURN and the program should reload. The computer controls the cassette unit motor, starting and stopping it at the proper times. It's also possible to run commercially written programs (machine language) from cassette, and use special educational tapes that incorporate both the data and audio tracks from a cassette. Ask Best about this.

>
The 7800 doesn't require any special adapter. It has both a 2600 TIA chip
and a Maria chip. When you first power on a 7800, it first checks the
contents
of the cartridge. The 7800 software requires the code to be encrypted. If
the
code does not pass decryption, the 7800 assumes the cartridge is a 2600
game and operates in the 2600 mode.

It's interesting to note that in the 7800 mode the 2600 TIA chip is used
to generate all game sounds.

Jerry Jessop, if I remember right, made reference to some engineering
that was being done to incorporate a 2600 TIA chip into a computer
setup. But at the time, GCC was also doing the 7800 and they manage
to win that battle. But Jerry can explain it better than me.

Or you can get the World of Atari video and hear Jerry talk about.

Steve,

Do you get sound??? The only reason I ask is the keyboard and sound are
both controlled by the POKEY chip (POTentiometer KEYboard).

If not, the chips on the keyboard are probably flaking out and you need to
replace the keyboard. (The Reset, Option, Select and Start and directly
connected to the power board and are not part of the keyboard itself.

Yup, sounds about right. Makes you wonder what the REAL4 and REAL8
were originally intended for though. Given that the OS doesn't
support these formats, then they wouldn't be of much use. I guess the
REAL4 could just be a cut down version of REAL6, with 4 digits less.
But REAL8? Makes me wonder if Atari had plans at some point to have
floating point routines with different amounts of precision.

CC65 also has a few other quirks here and there that you have to look
out for (and might even be worth fixing). Such as it will happily
take a function returning a value with no return statement at the end
and cause your computer to crash when the executable is run. That's
one easy to make mistake. And having a 256 byte local variable limit,
but letting you create more than 256 bytes of local variables. If you
use macros you also have to be careful not to exceed their maximum
length. You can get CC65 to produce working code, you just have to be
careful with it. It'd be nice to see some of those bugs fixed.

3086. 800 OS (SO...?) card

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-13 00:00:00 UTC
From: John <smile@ptdprolog.net>
Message-ID: <K2JU1.3266$av1.6362780@nnrp1.ptd.net>
Source record: 59304

I have an Atari 800

There is a card inside with OS (or SO...?) #CO12989 rev. E. There are, among others, three ROM chips labelled A401, A402, and A403. The A401 chip has been removed and replaced with a mini-card called an "OMNION by David Young". It put two toggle switches on the top of the 800 (one of my XLs also has this "feature") This mini-card has stopped working and I would like to replace it with the regular A401 ROM chip for the OS (or SO) #CO12989 rev. E card.

Any help would be greatly appreciated ..... :)

if anyone in the NE Pennsylvania, NY, NJ area would like a copy of some games, DOS (many types), utilities, PLs (I have Deep Blue C, Turbo Pascal, Forth, Action!) let me know what you want and maybe we can meet up.

thanks muchly, John

P.S.

I just found a little chip which doesn't quite fit the above socket, but is interesting...

it is labelled an INTEL D27128, L5130303S
it is a 28 pin ROM chip (14 pins each side)...it has a sticker on the top with "80" on it
WOW!!! I just peeled the sticker back and you can look right into the silicon...?!

does anyone know what this is? ...J

CTH is hosting a chat for everyone interested in the Atari 8-bit line of computers. It begins 9:30 a.m. Washington D.C., 3:30 p.m. London, 4:30 p.m. Poland, 11:30 p.m. central Australia. Any web browser can access this chat, no special software required. Lynx users will want to choose the no frames option, all others should choose the frames option. Several discussion threads can take place at once by typing the name of the person you are replying to first. Like "Fred, where can I find the big cheese in Mercenary?", or "Tom, how do I implement a 'skip word' macro in Mac/65?".

Here's the URL for the chat.

http://cth.tzo.com/EveryChat/ChatWorld.html

But feel free to drop by anytime. There's no telling who might be on.

> however.

I heard that someone (Nick B. I think) hacked a 2600 game like Combat to work on an A8. The 6502 CPU is compatible with the 6507 in the 2600 so you're half way there.

Then there's the thing about screen display, the 2600 draws the screen right on the TV using scanlines. This was done on the 8-bit by drawing in a section of memory and putting that on the screen. Not to mention little things like reading the controlers and sound.

If someone out there knows what I'm talking about and can fully explain the techinical details better, then please let us know... :)

3094. Whither FlickerTerm?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-13 00:00:00 UTC
From: halliwee@ts436.dyess.af.mil
Message-ID: <700e48$i3n$1@nnrp1.dejanews.com>
Source record: 59312

Thomas Drake recently sent me an email asking about FlickerTerm 80.
I thought the group might be interested in some of this stuff too...

>Whatever happened to FlickerTerm 80?

>What was the last release version?

>Are you planning on doing any more work on it?

Tom,

FlickerTerm fell victim to an unfortunate confluence of factors.
Any one by itself might not have stalled development, but together
they proved lethal. The factors were:

1) I got a job working with computers all day, which means I'm a
bit "computered out" by the time I get home.
2) Flick's code size had expanded to the point that I was going
to start needing the 8K of RAM under the MAC/65 cart, which would
mean a LOT of cartridge insert/remove hassle.
3) The two main things on my to-do list were a capture buffer, and
Xmodem, both of which are kind of scary considering the Atari's
non-concurrent I/O structure. Plus I'm still not quite sure what
the heck a CRC really is.

So, while it's not *impossible* that there'll be another major
update to FlickerTerm, it's not looking likely either.

The last version released was 0.51, I believe.

If anyone out there has an Xmodem CRC module they'd be willing to
donate, I'd certainly be willing to take a run at integrating it
into Flick (though 8-bit m/l tends to be heinously UNmodular...).

3095. Re: Best Atari Assembler?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-13 00:00:00 UTC
From: Mark Keates <Mark@mkeates.force9.net>
Message-ID: <3623AC60.603FC68F@mkeates.force9.net>
Source record: 59313

The work the Commodore people have done with CC65 looks very good, like the ability for different target platforms, more standardised C etc. They did leave in the atari lib code but not worked on it, that's what I've started doing (using DJGPP). Once it can compile itself I'll be happy :-)

Mark.

****

CHICAGO EXPO
For the Commodore 64, Commodore 128,
and other Commodore Computers

Featuring MAURICE RANDALL and WHEELS 128!

* Meet various luminaries of the Commodore world
o The great Jim Butterfield will be present!

* See the latest developments in Commodore hardware and software
o Hard drives, memory, high speed modems, and SuperCPUs galore
o State of the art productivity, development, and demo software
o The latest in operating systems: Wheels 128!

* Find great deals on hardware and software

* Challenge someone to a game of Archon or MULE and be humbled

-Hosted by the-
SWRAP User Group, Inc.
(South West Regional Association of Programmers)

WHEN: Saturday, OCTOBER 24, 1998
9 AM - 5 PM
COST: $5.00 per household family
WHERE: Holiday Inn Conference Room
LANSING, ILLINOIS

DIRECTIONS: Lansing, Illinois is a southern suburb of
Chicago. Take Interstates 80/94 to Exit 161N, Torrence
Ave North. Turn left at the light by Checkers, then left
again and follow Frontage Rd to the hotel.

I'm searching the .ATR version of the famous Synapse game Alley Cat.
If you have the file or a link please contact me.
If you have the binary file, no problem for me... i can make the conversion
to .ATR file.
Thanks.

Remove _enlevez_ceci_ from my E-mail adress for any answer.

3098. New SIO2PC version 4.19 & New Web Site

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-13 00:00:00 UTC
From: Nick Kennedy <nkennedy@cswnet.com>
Message-ID: <700n3k$4qo$1@news.csw.net>
Source record: 59316

8-bit Users:

I've recently completed a couple of tweaks to SIO2PC and put out revision 4.19. I've also created a Web Site so I could put out SIO2PC for downloading. This is something I should have done five years ago, but ... oh well.

I'm a total neophyte to html and all things web related but I did a successful test download a few minutes ago and it worked. Cross your fingers. I hope to soon also post schematics for SIO2PC and 1050-2-PC, source code and shareware stuff by myself and others.

Regards,

Nick
(The SIO2PC guy)

One clue more that that's an eprom...

Be carefull, uv-light can erase the memory of this chip and normal light
have enough uv-light that it *could* erase parts of an eprom if it's
exposed to long. But don't ask me how much time "to long" is... :-)

That probably was the OMNIROM EPROM. Now it's probably erased or
corrupt.
EPROM's are erased by shining UV light into that window....UV rays
are found in
sunlight. I learned the hard way too.

The CX80 has the same pinout. Except for pin 9 maybe. Damb, I should know,
I'm trying to translate a Dutch magazine article into German about how to
convert a Trackball (CX80) into a mouse.

BTW there is also a CX53 trackball. It was intended for use with the 5200
computer. Isn't it nice how the first number after a letter tells you what
computer the hardware was intended for (it's the same for Cartridges btw).

Nick,
Does 1050-2pc work with any Atari drive or is it specific to the 1050?
Can it do both read and write operations?

Well, Clay, FlickerTerm has one advantage over Ice-T from the standpoint
of my setup. I run a null-modem cable to my PC and use it out of R2: on
the P: R:. Ice-T doesn't configure to R2:.

So why is this important? Well, Tom Hunt is developing that proxy
server ...

Let's put it this way. If the guys can figure out how to help Clay
integrate some transfer protocols into his program, and Itay can patch
Ice-T to provide a selectable R1:/R2:, we'd have the best of both
worlds!

Nice start, Nick. A couple of positive comments:

1. Emphasis on SIO2PC (where it should be)
2. Nice appearance at top of page

And then, a couple of suggestions:

1. A link to your e-mail would be very helpful.
2. In case some non-Atarian wanders in off a search engine,
or just at random, you might consider a fuller description
of
various items.
3. You need a fatter font near the bottom of the page. What you
have is hard to read against that background.

In any event, good luck with the page! It should start something _BIG!_

I got lucky when I bought my first 1030 modem in 1986. There was a kid in the store (EB exton square mall) that made me a copy of a wacko terminal program that had a list of 10 local bbs's. When I think of how much time I spent downloading programs over the next 2 years and compare that to downloading a 14 meg zip file crammed with atr's now on a T1 at work (78 seconds:) Sigh.. Do you by any chance have an old list of philly bbs's? Thanks Mark

lp>Thanks,
lp>Lou Pirog
lp>lpirog@home.com

Lou, I checked the SAMS manual, and L6 is an inductor, its function being an RF choke. No value was given for it. It should have colored bands, just like a resistor. It also appears that it should have 12 volts going through it, if that's any help.

>Can it do both read and write operations?

Any Atari drive--any drive that responds to SIO bus commands, which should be any Atari drive.
It will write a disk image back to an atari drive. The 1050-2-PC software is actually a sub-menu of SIO2PC, but different hardware is needed.

Run SIO2PC, then choose menu options A, then D to see the sub-menu of functions.

Hey all, I've tried on-and-off for a few months to find someone with a copy of the Insomnia music editor program (preferably with manuals). Search engines gave me a lot of references to sleeping aids and clinics and such, but no leads to people with the old computer program.

Anybody happen to have a (probably dusty) copy someplace that they want to part with (or sell)? Or possibly suggestions on where to look? The closest I came was a now-defunct AOL account.

Thanks in advance. Feel free to send me direct e-mail (you need to edit out -NOSPAM- from my address).

Thanks again,
-Steve

The binder and the whole aura of starting up that game is an
example of the power of packaging...it was mad, frightening, that
off-pitch music (first time I played it, I had volume at -maximum- and
almost had a heart attack). I still walk over to the wshelf there and
open up the binder and just smell the pages...brings it all back.
Never got far in the game, it seemed like, the manual, a manual for
"life", sort of, an alternative life that was always too complicated, but
still engrossing.
Yeah, it's all just about the packaging for that game ;-)
Anyone played the sequels on the ST?

3133. Who does the FSK in tape (atari1010)

Hello,

I know that the atari tape device (1010) record the data
in FSK modulation.
My question is who modulates/demodulates ?
Is it the atari or the tape ?

(in other words: is the mod/demod in the atari so I can
use 'regular' 'patched' tapes, or is it the 1010 itself?)

Thanks

The FSK mod/demod is in the 1010. There was an article in one of the electronics magazines (I believe Popular Electronics) on building a FSK mod/demod unit that allowed you to use a regular cassette recorder, and even included a circuit to connect a second recorder to make true dupes of the tapes. I have that issue around here somewhere, but I haven't looked at it in years. But I do remember it uses two Exar chips, the 2206 and 2211.

I know you said you prefer not to buy carts...but B&C ComputerVisions
does have a Spartados on cartridge. Not SDX but another later version
of the 3.2 series. I don't know exactly if it will work on the 400/800,
but
it's worth visiting their web page to check it out.

Message-ID: <3626D398.7C3EF8E3@earthlink999.net>
Source record: 59244

I'm looking for an old disk copying utility for Atari called Black Rabbit. It used to work beautifully on my Atari 800XL, much faster than DOS. If anyone still has a copy of it and wouldn't mind shipping me a copy (I'd pay the cost, of course) I'd greatly appreciate it.

THanks!

Mike (mchandle@earthlink999.net - without the 999 ... no spam!)

```

Somewhat like me -- the very first time I used an Atari computer was back in 1980 when I was living in NJ. I still remember that day clearly: It was at Paramus Park mall at the store Video Concepts. It was a newly opened store, and amongst the electronic gizmos, they had a 400 and 800 hooked-up. That was my gateway into computers, and I became hooked instantly. However, I didn't get an Atari 800 until 1983, by which point it cost "only" $500. Oh, those were the days!

3141. Re: Long live the fellowship :)

```
: I got lucky when I bought my first 1030 modem in 1986. There was a kid in the
: store (EB exton square mall) that made me a copy of a wacko terminal program
: that had a list of 10 local bbs's. When I think of how much time I spent
: downloading programs over the next 2 years and compare that to downloading a
: 14 meg zip file crammed with atr's now on a T1 at work (78 seconds:) Sigh..

Another great memory for me, too! My first modem was the XM-301, which I
bought in 1986. I longed planned to get on-line from the coverage Antic
magazine would give in their (usually) August issues. But at first I was
skeptical, since it seemed like the only options were the commercial
on-line services, which were really, really expensive back then.

I remember my early days of using BBSes and the like, how the biggest
files seemed to be like 32-60K (and how "long" it took for 300 baud!).
It took like an hour or more just for one measily compressed disk game or
utility. A year later I got an upgrade to the Avatex 1200HC w/P:R:
Connection, which I thought was REALLY fast at the time. And in 1990, I
got a Cardinal 2400 baud modem, which I thought was REALLY fast, too.
Oh, how times have changed! Alas, by 1991, I began phasing out my nearly
full-time Atari usage in favor of the PC for varying reasons (support,
speed, etc.)

I miss the old days of being on-line, because those were just relegated to
computer hobbyists like us who knew the meaning of responsibility and how
to post w/o attacking others. Today it's become a free-for-all, no thanks
to certain on-line services....

Uhm. You want to use the lookup table to allow doing a byte at
a time. Without the table you do each bit and it bogs the proggy down.
Itay could help you, also.

It figures AOL wouldn't have it. I just don't why people pay AOL good money.

In 1983 you could 800XL's with 64KB of memory at all kinds of major
outlets for around $320.

L6 is a 3.3uH choke. If it's open, that would cause the dirve motor
from spinning. You may have more parts bad than just this one as
something went and took L6 out.

Take care...

The 800XL was not introduced around 1984, when the Tramiels took over the
company. Maybe you were thinking of the 1200XL?

At the time I got the 800 (March '83), it was still one of the "regular"
computers Atari was putting out. However, just a couple months later, the
company was going crazy and the price dropped even more, which included
that $100 rebate. That was one of many moves that eventually killed the
company during the home computer wars.
```

I had this same problem once, it turned out to be "only" a faulty diode
in the power supply stage. In the rectifier bridge I think (remembering
back to 1987!) Cost me $35 to get fixed! (about 2 weeks paper deliveries then!)

(software to access RAM under OS with PORTB bits 4 and 5 low.)
Software?
You write the software.
set bit 0 to low and you access RAM under the OS ROM.
I dunno about actually doing this, as you disable the
ROM, with VBI and all. I guess you're asking how to
actually use the RAM under the OS. You have to CLI
or SEI or something. I could give you what the bits
of PORTB do, but I don't think that's what you want.
I have some code around that demonstrates use of
the RAM under the OS. Is that what you're looking for?
(reading my post, 'set bit 0 to low' should read
clear bit 0.
)
:)

I was just going by what somebody else said. I still think AOL is to
be avoided in favor of a 'real' ISP. But, maybe that's all some
people have available to them. :(

Okay. I was pretty sure I remembered the 600XL & 800XL out around
Christmas 83. Be that as it may that is still later than March 83 so
your point is well taken.

Jack,
Sorry, but I bought my first Atari computer at Christmas time 1983. I
eas a 600XL. They had been out for a few months at that time. I was
selling computers at Wall to Wall Sound and Video in Cinnaminson,NJ
then. At that time a already had a Tandy (Radio Shack) CoCo. Right after
New Years I returned it to upgrade to an 800XL. The 16K 600XL was just
too wimpy for me.
My first modem was a Promethius Promodem 1200. I guess I got that
around 85 or 86. By then there a few BBSes in the area. JACS being one
of them running at only 300bps. I was ahead of my time back then. Heh...

I remember getting a computer catalog in 1980 that I used to read over and over thinking someday I would have the $399 for an atari 400. The $999 for the 800 at the time was a bit high but still well under the $1600 apples or commodores or heathkits. Then the magazines advertized the Sinclair ZX-80 for like $229 so I started saving money. The ZX-81 came out in 1982 for $149 so I snagged one of them and bought the 16K ram for $49 about 2 months later.

When I picked up an 800xl in 86 the price had dropped to $179 to compete with the commie 64 when it dropped to $250

You are right, those were the days. When you were so fascinated by making a machine do something you spent hours writing your own programs. I wonder what the percentage is now of people that buy computers and actually do any programming. Has to be low.

Sigh :)

The Super Archiver chip is an Upgrade chip to the Stabdard 1050 disk drive
that enables you to copy Protected Floppy disks with it's own softwere,
(meaning you need to have the Super Archiver copying program)
there was also a follow up upgrade to the Archiver called the BitWrite that
you could add to a disk drive with the Archiver upgrade (but this is a
different story...)

i need to try and see if i can find my Super Archiver Manual,

Regards,

Nir Dary

Well to me web pages are nothing more than what BBS's used to be 12 years ago.
Increase quantity and decrease quality. It used to be more like a community
online. One of the BBS's 'Middle earth II' (and the fellowship people) used to
have meetings at the sysops house every other week. Imagine trying that now :)

: Christmas 83. Be that as it may that is still later than March 83 so
: your point is well taken.

I was actually speaking too soon, because I was thinking about the XEs,
which were developed a year or so after Tramiel came to Atari. Also, one
of his first orders of business was slashing prices on the XL line, which
probably threw off my grey matter somewhat. Somehow I got those two events
intertwined. Oh, well. It's been ages; this sort of thing is ancient
history. At least back then I was more "in the know." <g>

Source record: 59422

I've got a 400 with 32k Axlon board... I am aware of the 48k Atari board, which
I understand really has 64k... is there a way to modify this board to access
the extra 16k (Axlon bank select)... or, is the Byrd/Torres 16k board mod the
only way to go...???
Help!
Thanks...
Vinnie

3162. Wanted: Disk drive!

I am looking to acquire another disk drive as my 1050 drive is causing me no end of problems. Has anybody got a 1050 (possibly XF551) drive in a good condition that they are seeking to sell? It must come with leads which work as I daren't use my power supply again in case that was the cause of my problem. Will negotiate reasonable price. Will pay postage but please note I live in the UK.

If I'm not mistaken, writing to the addresses c000-ffff will write to the ram even if the rom is enabled. Extended ram is mapped to 4000-7fff and it is separate from the ram under the OS.

Net-Tamer V 1.08X - Test Drive

Hey, wich program do you use?

Generally...is there a program for the atari wich uses a serial or ps2 mouse?

wich memory / i/o-registers does it use, do you know the ATARI-protocol?

are there some people who want to connect a mouse, there must be a new standard defined... do you have software for the new standard???

i often thought about this problem but theres no software-standard to use a mouse!

im right ? nice to read your response...

bye, Andrï¿½.

yes/no, on a standard 800/130er theres no way to reach the RAM space from
$d000-d7ff (I/O area, absolute no way...) and also no way to reach
($c000-$ffff-RAM) in a separate bank from ($4000-$7fff)!!! (without hardware
expansion)
if theres a write command on $c000-$ffff (excl.I/O) it will go to the endless
emptyness, when ROM is selected!

btw.: i want to have some infomation about the memory access areas on a 130er.
(i only have an 800er (768KB) without FREDDY)!.
On 800er theres an MPU, i know the most of it whats inside, on 130er theres a
FREDDY Chip, thats the unknown part for me...
Theres a problem of mine!

Can a FREDDY Chip be detected (130er) by setting up a Displaylist in an
extended memory bank, thats mirroring in area $4000-$7fff (ANTIC access
allowed), with an DL-Interrupt activated to jump in a interrupt subroutine
thats resident in area outside $4000-$7fff? to detect a 130er?

Are ANTIC-Displaylist-Accesses mirrored in the extended RAM, or only IRMs, if
only the antic-bit, not the allround-memory-bit is set ???

There are many RAMDISCs about 128K (for 800er), but they dont use the
separate/extra ANTIC-memory-access in this extended area!

i like to detect it per software!, please help!

Are there (perhaps german area) programs wich use the separate ANTIC-access in
$4000-$7fff for work?

i hope you understand...the german 8-bit-newsgroups are not very frequented by
'freaks' to discuss such problems!!!

bye, Andrï¿½.

3177. Re: Who does the FSK in tape (atari1010)

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-16 00:00:00 UTC
From: swallace@home.dmv.com
Message-ID: <7064ncoah1@supernews.com>

Adi Perry (adiperry@geocities.com) wrote:
: Hello,

: I know that the atari tape device (1010) record the data
: in FSK modulation.
: My question is who modulates/demodulates ?
: Is it the atari or the tape ?

: (in other words: is the mod/demod in the atari so I can
: use 'regular' 'patched' tapes, or is it the 1010 itself?)

: Thanks

When writing to tape, the computer sends an FSK signal to the recorder. The signal is laid down on the tape at the rate of 600 baud. The mark frequency is 5327 Hz and the space frequency is 3995 Hz.

When reading the tape, electronics in the cassette unit amplifies the head's output signal and processes it into DATA which gets sent to the computer.

The "modulation" is done by the computer during write and "demodulation" is done by the cassette unit during read.

Steve

The is some more to the story. With the Happy (1050) Archiver software, the
Happy can be programmed to be much like an Archiver.
Once the drive is in Archiver mode, then
the Super Archiver software can be loaded.
It will still not do all that the regular SA will
do, but it does have more features than the
Happy Archiver. Available at B&C (per
their listings).

The FSK modulation actually takes place in the Atari itself. The
1010 recorder is simply that, a recording and playback device.
Hope that this helps

I have a ton of floppies here...if I don't get a response by Sunday they are trash..............."ton" = 1000+

what are they? lots of copies of things like Atariwriter+, various DOS versions, loads of game copies

free to anyone who can.......

a. pick them up in Northeast Pa., USA

b. prepay to have them shipped to you (probably $30 - $40)

again, these are copies of programs...I can't guarantee they work, though what I've tried has been OK
I got them at a yard sale and have no use for them

talk to ya, John

Modulation is done by the Atari (by POKEY).
Demodulation is done in the 1010.

I know some people have modified normal tape recorders to
connect them to an Atari, but I don't have any references.
Sorry!

Howdy Russ

What I was trying to ask was:

If I multiplex the bit used for OS RAM control (PB0 if I remember correctly), and I run certain programs (e.g. Sparta or TurboDOS) that use OS RAM, can I get in trouble. Usually what is done when multiplexing is adding two NAND gates in the address line of BASIC control. But that would switch out BASIC. And in my case OS RAM. I'm planning on using an LS373 (latch). The signals controlling BASIC, OS RAM and the selftest (and Missile Command on the XEGS) will be "locked" whenever PB4 and/or PB5 go low (read: their status will not change as long as either or both are low). So the question remains: does software exist that changes the status of PB0 while PB4 and/or PB5 are low.

CU Mathy Van Nisselroy

Howdy Andre

>On 800er theres an MPU, i know the most of it whats inside, on 130er theres a
>FREDDY Chip, thats the unknown part for me...
>Theres a problem of mine!

You might not know this, but there are three Atari 8 bit computers that could be called 800er. The 800, the 800XL and the 800XE. The 800X? (800 are rare in Germany while 800XE's are rare in every country outside Europe) don't have an MPU it has an MMU) Memory Management Unit. It swaps in PIA, Pokey, Antic, GTIA and the cartridges. The Freddy chip just replaces the two 158 chips inside the XL series plus the delay circuits. Check out the schematics of these computers. The ABBUC sells them. You are comming to the JHV in Herten on the 24th, are youï¿½

>There are many RAMDISCs about 128K (for 800er), but they dont use the

Howdy folks

The Super Archiver or the SA II can be bought at CSS. The guys who built them.
They now use an other name on the phone (Bob Puff would have died of starvation
if the Atari 8 bit would have been his only source of income).

They also have multiplexors, BlackBoxes, Ultra Speed plus OS's, memory upgraded
130XE's, The impossible, the Silencer, etc., etc., etc.

Howdy

If you can not find somebody in the UK, you might try Bob Klaas in the USA (he both repairs and sell 8 bit stuff) or Erhard Puetz in Germany (he's the floppy repair guy of the ABBUC (German Atari 8 bit group that has members all over the world). Bob can be found in the group, Erhard can be found via the ABBUC website. You can select between english and german on his site. I believe it is www.atari-computer.de/abbuc/atreju

>
>email your fax number.... I had an article called 'mouser' from one of the
>mags... antic, analog... one of them...had the instructions....

I remember an article about mice in Antic or Analog. But it concerned commodore mice. These were called joystick-mice, because they looked to the user like a mouse, but to the computer as a joystick. I guess (but I might be wrong) what Nir was looking for is a way to connect PC mice to the Atari 8 bit.

CU Mathy Van Nisselroy

PS I've seen joysticks that have "feedback". It was standing on the counter throwing its handle in all kids of directions like a ghost was handling (or trying to distroy) it. The silly thing people invent just to sell you something.

3196. Dead 5200?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-16 00:00:00 UTC
From: "Jeffrey S. Jewell" <jjewell@ix.netcom.com>
Message-ID: <36276EAD.8BD7E745@ix.netcom.com>
Source record: 59264

This is sort of on topic, the 5200 was basically a 400, right?

I bought a used 5200 that doesn't seem to power on. It looks like there's a space in that smoked cover for a power light, but nothing comes on. The "game cord" that plugs into the switchbox looks like a coax, and the middle prong is loose from the base, but still attached by small wires.

Does this sound like where my problem probably is? I'm not handy with a soldering iron, but I know someone who is, are there any wiring diagrams for rebuilding those plugs?

Is there another likely cause for my power-on problems?

Thanks for your help,
Jeff

3200. Best Atari Assembler? More on AMAC ... and SIO2PC ...

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-16 00:00:00 UTC
From: Nick Kennedy <nkennedy@cswnet.com>
Message-ID: <70860o$6e0$1@news.csw.net>
Source record: 59268

8-bit devotees:

I've updated my website to include a text file on AMAC. It reveals the command line options and syntax for most of the pseudo-ops and stuff like that. It also has unsightly fragments of my source code pasted in at random so you can see a bit of what an AMAC source file looks like.

I included instructions on how to remove the copy protection. As I said before, it slows the thing down enough to make its use intolerable. And of course you coudn't run it at all from a ramdisk without taking the copy protection out. (You could via SIO2PC though--it can emulate bad sectors.) (Couldn't resist the plug ...)

My site is less than a week old and evolving rapidly. I've gotta get more stuff on it before I run out of steam!
I also separated the SIO2PC page from my personal page, although they're linked. You can go directly to the SIO2PC page with www.cswnet.com/~nkennedy/sio2pc.htm

In addition to the AMAC mini-FAQ, I also added the schematic for SIO2PC. You can display the GIF or download a .BMP file which is zipped up with a text file giving a parts list, suppliers, etc.

I plan to put up my source code and a disk image with some utilities that work with SIO2PC and a few other Atari related things. I'm also working on a FAQ on SIO2PC gleaned from my ponderous and abstruse "readme.txt." file. Also expect to see the schematic for 1050-2-PC when I get it redrawn as a .BMP/GIF.

Thats it for now,

Nick Kennedy
(The SIO2PC guy)

Source record: 59271

Hi folks;

I have 2 Atari 400s and 1 Atari 800XL for sale, 100% working order.
Also 1-810 disk drive, works ok on MOST disks, probably needs cleaning and alignment. it's cable is frayed but working.
All cables, power supplies intact.

Software:

Approximately 200 diskettes (most double-sided) I estimate approx. 650 titles, 90% games. Everything from Synapse to Lucasarts, epyx to activision. many disks have 3-8 games on them, very few are demos or magazine games..can't even begin to list 'em...to the best of my knowledge, 95% work fine. If you're looking for specific titles, ask and if i can remember i'll let you know.

I am not a trader. Was really into games back in the Atari days and just need the cash.

I am looking to sell the whole lot as a package. will not sell individual titles. I live in Canada, will ship anywhere in North America (you pay the shipping).

Make me an offer.

I am an adult, and will deal with you in an honest adult manner.

Source record: 59273

I can tell you lots about the Ol' Hackers Atari User Group. I'm the newsletter editor, and we're probably the second longest continuous group supporting any brand of computer on Long Island. (The longest is probably our sister club, the Long Island Atari User Group, which supports all Atari products.) OHAUG was, until recently, exclusively 8-bit. We now have enough people with second platforms to be able to offer limited support for those platforms. We're international -- we have about forty members, of whom only about ten are local. We produce a newsletter on floppy bimonthly, have a pd/shareware/freeware library that's approaching 700 disks _AND_ the Pool Disk I. We should be getting Pool Disk II when it comes out at the end of this month. We also have the distinction of attracting (believe it or not) beginners on the Atari 8-bit, even at this late time in its history.

If you're interested in joining, please respond to me in e-mail and I'll give you instructions on how to do it. Dues are $2 per month, but the dues year begins in January. So, if you want to join now, figure $4 for the rest of this year and $24 for next year.

I hope this answers some of your questions.

Alan

You are sure to get differing opinions on this, but I ditched PCXformer for Atari800Win. I have had much better luck with most games, and the options are pretty extensive.

I don't mean to put down PCXformer, but for games, Atari800Win is much better.

My $0.02,
Steve

3212. Looking for .ATR games

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-16 00:00:00 UTC
From: David Haylett <se95dh1@dmu.ac.uk>
Message-ID: <36272EEA.3A0F@dmu.ac.uk>
Source record: 59280

Hi all!

Is there anyone out there who can help me? I'm trying to rebuild my old collection of Atari XL
games for use with XL-It! emulator (the best!), but I'm still missing some. Does anyone have
(or know where I can find) Leggit, Mediator, Tutti Fruiti, Spooky Castle, or Atari Safari???

If possible, can you e-mail me at se95dh1@dmu.ac.uk

I'd be forever grateful if anyone can help.

Cheers,

Dave Haylett.

3213. Re: Dead 5200?

Newsgroup: comp.sys.atari.8bit

Hi. It sounds like you have the four-port version. If so, then you need
the special Atari 5200 4-port RF switchbox. The power supply and the cable
from the 4-port 5200 plug into this box. If it is a 2-port version, then it
needs a standard RCA cable and TV/Game switchbox.

Good luck,
Jason Whorton

You need to make a custom cable for JAM!! (jazz??) - the VGA to NTSC converter. It is not hard if you are good at that sort of thing.... :). With a stock Atari monitor cable, all you get is composite video which is kind of crummy. The s-video mode is fantastic. Make a cable.

I do have the oddball switchbox. It appears the switchbox is powered, and it powers the 5200 through the same RCA type cable as the video comes over, correct?

I got an email suggesting that this switchbox was bad.

Thanks,
Jeff

I kind of miss GENIE, the way it was in the old days. I found that
the discussions on the old pay services were a lot more fun than
Usenet, which even had problems back in the old days, I recall.

I wish we could just auto-kill all cross-posted messages.

3223. Disk Software Question

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-17 00:00:00 UTC
From: ab752@sfn.saskatoon.sk.ca
Message-ID: <70a52d$pr7$1@missing.its.to>
Source record: 59196

Hello.

I recently became interested in reliving some of my Atari 8-bit experiences from the 1980s. Presently I have the Atari800Win emulator running on my Win95 machine.

My question is: how do I access files from the disk drives? I can get a directory, but when I try to use L to load a binary file, I get an error 164 or "TOO MANY CHARACTERS". It doesn't seem to matter which DOS version I use, the result remains the same. Am I missing something here?

The files I am trying to access are in .ATR format on a virtual disk drive, and in particular are on a game compilation disk (GAMES0006.ATR) from one of the Atari FTP sites. Some of the file names are fairly long, and none of them have a suffix (.EXE or whatever).

The only games I have been able to run so far are those that are bootable. Unfortunately I was never able to afford a disk drive for my Atari 400 or 65XE, so I remain quite ignorant about how to use Atari DOS.

Much Thanks!

kevin

I have a stack of Antic & Analog magazines that start with 1984 issues and continue through the end of publication. All are used but complete, some have loose covers, tears courtesy of the US post office.

Anyone interested in these, please contact me at gwestndrf@aol.com. If you live in the United States, I will send them to you for shipping costs + $1.00 for packaging. I live in Decatur, IL.

Gail

3225. FS (US) Atari 8 bit items

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-17 00:00:00 UTC
From: gwestndrf@aol.com
Message-ID: <19981017070348.27309.00001265@ng-cr1.aol.com>
Source record: 59284

I had a couple of buyers back out of deals, so some of these items have been previouly advertised.

Atari 800 computer w/power supply and RF cable/TV box
Atari 800XL computer - no power supply or cables
Atari 1020 plotter w/power supply and I/O cable; new pens; Joystick Sketchpad on cassette; Print&Draw, Screen Plot, Print Shop printer driver on disk
Koala Pad w/stylus; MicroIllustrator software on disk.
Star SG10 printer w/original box, manual, spare print head; lots of new B&W and color ribbons

All items work and will be retested before shipping.

US buyers only please. Will consider offers in order received on all as a package or on individual components. Buyers pays shipping costs.

Please reply via e-mail to Gail at gwestndrf@aol.com

What version of SIO2PC do you have? A couple years ago I discovered that
some newer computers were putting the serial chip into the loopback mode and
leaving it there. I had to add explicit instructions to take the chip out
of that mode. Also I don't recommend running in a DOS box out of windows.

Get the lastest from www.cswnet.com/~nkennedy/sio2pc.htm/

good luck,

Nick

3229. Atari 8-bit collection for sale

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-18 00:00:00 UTC
From: summerspa@aol.com
Message-ID: <19981017201215.21861.00001946@ng32.aol.com>
Source record: 59197

I am trying to find a new home for my Atari 8-bit collection. I don't have time to devote to it like I used to. And it's taking up too much room in the garage. I hate to think of all that equipment, manuals, disks, and cartridges sitting in boxes out there, when I know someone else can give it the TLC it deserves.

I wanted to sell it all in one lot but will sell individual parts/pieces if nothing else.

The total collection is in seven (7) boxes totaling 202 lb. Yes two hundred and two pounds.
Make sure you find out what that will coast to mail or ship from Jacksonville, FL 32246 to your house.

The following inventory is sorted by title.
Read the list as Title, Type, and any notes.
Make your message reader a full screen display to read or email me and I can send the original invetory in any of several formats or sorted by title or type (category)

Jeff,

It could be many things, start with the power supply, hopefully if you have a digital multimeter, check to see if your getting voltage at the specificied levels on the back of the power pak. Next if you 5200 has 4 controller ports on it then you have a large switch box that both the power supply and 5200 plug into and then you hook it up to your TV. When you press the power button on the 5200 do you hear any sort of "click" from the switch box (it could be bad and you need to replace it). Next, watch your 5200 where the power indicator is, see if it blinks on even for a brief moment.

After you've done all of this, you may need to replace your power supply and/or switch box, they are usually the culprits. Call BEST Electronics, they stock all hardware replacement parts for Atari 5200's 408-243-6950.

DEUCE 98
The Atari Users of North Texas (AUNT) Computer Exposition will be coming again to
Dallas this November in conjunction with the monthly DFW XChange Super Saturday
activities at the beautiful Dallas Infomart. Show date is planned for Saturday the
14th. As with the last three DEUCE shows, the actual show date will be finalized
120 days prior to the exposition. The exposition, along with the Super Saturday
activities, charge no admission fees and are open to the general public. The one day
exposition is planned to begin at 8:30 AM and run until 4:00 PM. A Friday evening
pre-show get together and a post show get together are also being planned.
November is still a great time to visit the Dallas Metroplex. The DFW XChange Super
Saturday activities are a monthly computer extravaganza where thousands of computer
enthusiasts get together, share their computer interests and enjoy some of the best
computer and high-tech electronic buys in Texas. This November will again be special
for us Atarians because so many of our finest developers and dealers will be partici-
pating in the activities.
The Dallas Infomart facility, a replica of the famous 1895 World Fair Crystal Palace,
is located in the heart of the Dallas commerce district at 1950 Stemmons Freeway
(Interstate 35E). The facility is leased by the DFW XChange each month to provide
a community service to all computer users in the Dallas-Ft Worth Metroplex area. The
Atari Users of North Texas is one of many participating user groups that help support
this community service by sharing our Atari computer interests, general computer
expertise and providing user assistance to our local Atarians and the interested
general public.
Vendors are being lined up. Systems for Tomorrow, chroMagic, Crawly Crypt Corp and

Emmulators have already expressed their interest in participating in the show. Vendors
interested in participating can contact David Acklam at (972) 242-9655 or via email at
d.acklam@genie.com. You can also visit the AUNT internet home page at
http://www.startext.net/homes/aunt.

3238. Parts lists for 800XL power supply?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-18 00:00:00 UTC
From: gwestndrf@aol.com
Message-ID: <19981018114957.01104.00001740@ng134.aol.com>
Source record: 59206

The CO61982 power supply for my 800XL computer quit working. It's the style that is encased in potting compound.

I had one of these go bad in the past with a blown fuse, and was successful in chipping away the compound to get to the fuse. This time I wasn't as lucky and messed up (destroyed) some of the other components.

Does anyone know where I can find a parts lists and schematic for this power supply? Although it might not be the most economical way to get a working power supply, I am interested in repairing this one.

Thanks,
Gail

Cathryn Mataga (cathryn@junglevision.com) wrote:
: I kind of miss GENIE, the way it was in the old days. I found that
: the discussions on the old pay services were a lot more fun than
: Usenet, which even had problems back in the old days, I recall.

GEnie was my second on-line service (was a member 10/91 to 2/98). It used to be a really good service, but I could no longer tolerate the new ownership (it changed hands twice after GE sold it in '93) and their very poor customer service (which was great). It had become a ghost town and their pricing tier went from best to worst in the business. Remember those $4.95 days for unlimited non-primetime use of Basic*Services?

When I was last on, it became $18.95 for 9 free hours (for members who joined in 1993 and before), $23.95 after that period, and $2.50/hr. after those hours were used up. What a rip-off -- and they still insisted on charging those idiotic prime time fees! I didn't want to be sucked in, so I switched to that $5 plan for three free hours of e-mail, and even then, I barely used the thing anymore.

Frankly, I thought the service went down the tubes when angry ex-Prodigy members stormed over in '93 (a consensus many of us shared, although the good Prodigy users were outnumbered by the bad ones). They wrecked the place with their arrogant attitude towards everyone. Before then, there was a really good fellowship there on a lot of the areas (Music RT, Showbiz, SciFi, Atari8, etc.). Those days are loonnng gone. But yes, that had some of the best discussions I had -- even better than Fidonet or the newsgroups.

GEnie (or Genie as it's known now) had made so many promises but most of them materialized. By the time they did, it was much too late.

From: Aleksander Martin <alex6502@friko.onet.pl>
Message-ID: <362A6297.C8B6C5A1@friko.onet.pl>
Source record: 59210

Hi!

I want to inform everybody that I have just patched side B of 'SHEOL'
demo disk. That means You can run both sides under Atari800 emulator
(DOS version, 320XE RAMBO mode).

SHEOL page ---> http://friko.onet.pl/wa/alex6502/sheol.htm

The only problem with emulator is that when memory banks are swithced it
dramaticly slows down!!!... But the demo works fine.

Have fun!

Alex

I don't believe a schematic for the supply is included in the 800XL or
600XL service manuals. There was at least one other design of supply for
those XL computers. It had the same part number as the black potted unit
but was chocolate and creme colored. It wasn't potted but had a
two part case with accessible and repairable circuit board.

The CO61982 supply delivers 5VDC at up to 1.5A. I believe it's
conventional in design with transformer, bridge rectifier, filter
capacitor, and 3-terminal regulator. If you could save usable parts from
your old supply (transformer, cords, etc.) you could probably refer to a
book on power supply design and build a suitable substitute. By far the
least risky (to your computer) and simplest solution would be to buy a
replacement from one of the several vendors who stock it.

Steve

3247. Help! I want to play an old game. . .

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: jeremy_patty@markcom.com
Message-ID: <70fq9h$eq1$1@nnrp1.dejanews.com>
Source record: 59140

I am looking for 'Computer Quarterback', by Dan Bunten, published in 1979, by Dan Bunten

Despite all the advances in technology and
stuff, there has not been a football strategy game that is more fun to play.

I do not have an Atari comp. any more.

What is the best way for me to play that game again?

Are there emulators for the Power Mac / or PC ? and a way to read in the old software?

It can't be too big of a file -

Any games available today based on the same program?

(Intereresting side note - I found out the late Dan Bunten had her sex changed and name changed to Dani Berry)

Please reply to jeremy_patty@markcom.com.

The Video Game Advantage Definitive Known Software List Collection

If you are looking for the most complete, detailed software lists available you have found them. And the best part is that they are all in a standardized format, so you can change system files without having to learn a new style or format! Currently 32 of the 40 planned files are on-line (2600, Intellivision, NES, Odyssey2, Sega CD, SMS, SNES, and TG-16 all still need some work, and will be on-line as soon as possible).

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Atari Jaguar / Jaguar CD
Commodore Amiga CD32
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
TurboGraphx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade
Colecovision
Emerson Arcadia 2001

Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2
Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

*****

Error 164 is a filenumber mismatch. Your GAMESxxxx.ATR is messed
up somehow, I suspect. Try to get some other .ATRs. Some of them
have boot loaders, others may not even have DOS on them. You
would have to mount the .ATR with game but no DOS in D2: and
'L'oad from there.

3253. Diamond OS

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: John <smile@ptdprolog.net>
Message-ID: <8nLW1.19$T01.178@nnrp2.ptd.net>
Source record: 59146

Anybody ever hear of the Diamond OS (by Reeve Software)? It looks like a primitive Windows OS
it's got Atari mouse support(or joystick if that's your taste) and a desktop with icons and drop down menus at the top

it was published in 1988

anyway, I have it in the original box if anyone is interested....$15
It looks pretty cool running on the Atari XL/XE/GS

thanks, John

3254. Free memory on a 400? How to show..

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: 8bitz@my-dejanews.com
Message-ID: <70g6dt$27e$1@nnrp1.dejanews.com>
Source record: 59147

Greetings programs. Found a mint condition atari 400 this weekend. I was so excited until I saw the power light didn't come on. Swapped the power board from my working beat up 400 and all is well. I noticed the memory board in one was a 16/32 board. It has 16 16k chips so I'm assuming it's a 32k board. The other says atari 16k and only has 8 chips. I remember a simple program to find out free memory but I can't find it. Can someone point me in the right direction?

I'm still suprised it didn't work. The screen goes black. The other 400 I have was in a flooded basement and I had to vacuum the dirt from it and replace the rf cord but it worked right away.

Anybody need 400 parts? everything but the power board works. Trade for games :) Also at the bottom of the "atari' box I bought was a Mattel Aquarius system. Anybody know any good games for this?

Thanks
mark

3255. Montezuma's Revenge on PC - what happened?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: Gareth <dial.pipex.com@garethd_.nospam>
Message-ID: <70g6bf$7ik$1@plug.news.pipex.net>
Source record: 59148

What happened to the souped up version of Montezuma's Revenge for the PC -
it was supposed to include a version of the orignal game? I saw a demo
advertised and plenty of info on a website but that was quite a long while
ago and AFAIK it was never released (in the UK at any rate.)

Is it available or is it going to be available?

Any information would be appreciated.

Gareth.

3256. DOS from scratch

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: dlormand@aztec.asu.edu
Message-ID: <70g6kd$f51$1@news.asu.edu>
Source record: 59149

Okay, after 1.5yrs of having an 800/1050 rig for nothing more than kid games, I am trying to venture out into the larger world of A8 software. It looks like I will need DOS to do just about anything, so I started trying to do this myself without bothering you guys.

I started with the Umich archive mirror at src.doc.ic.ac.uk, packages/atari/umich/. I'm using my peecee at work; I don't have one at home (and never will, if I have anything to say about it), so SIO2PC is out.

In the 8bit/Diskutils/Transfer directory, I found myutil.zip. This is supposed to convert between files on a peecee to files on an Atari-formatted diskette. Includes source code! Looks like there may be restrictions on 1.2MB drives, which is all I currently have on my work machine. Could be bad.

In the 8bit/Dos/Ataridos directory, I found dos25.arc. From the FAQ, it looks like Atari DOS 2.5 is the "Baseline" DOS, and is recommended for all Atarians, especially new ones.

In the 8bit/Archivers/Diskimages directory, I found dcmdsk32.arc, which is apparently required on the Atari side to convert the DCM files (complete disk images, rather like Magic Shadow Archives for the ST, unlike anything I'm familiar with for the TI) to usable Atari files.

I'm beginning to suspect a chicken/egg thing here. The DOS files are DCM, you need dcmdsk32 to convert them, and dcmdsk32 is an object file (like E/A3 on the TI?), which may require DOS to run. So you may need DOS to get DOS!

Or am I missing something here? I'm used to convoluted paths from FTP archives to usable files, but never to bootstrap an operating system! What's my next step? I am assuming I can format a floppy on the Atari under BASIC. I am hoping I can move the files via the 1.2M floppy drive on the peecee. Can I run the dcmdsk32 object file from BASIC?

No, Atari800Win is a Win32 only product (Win95/Win NT/Win98). Windows 3.X is a nightmarish horror which I no longer participate in.

However, for most machines that would be running Win3.11 today you should probably look at Atari800 for DOS, which has much of the functionality of Atari800Win and will run faster on lower end platforms.

To be honest because this is the very first example I could find that actually programmatically required RAMBO. I'll implement the switch in the next rev.

Another one I presume..Here's Alex's reply to me re the same prob from
the other day.

Hmmm.... That's probably because of the type of expanded memory.
I've heard You call them RAMBO and COMPY SHOP. The Sheol works with
RAMBO (that's uncompatible with 130 XE Antic/CPU DMA). I think I must
remember about that while making next demo.

What DOS are you trying to load the files from. Mydos would probably be
required since DOS 2.5 will not be able to handle the mega games disk
images. The filenames are 8 characters plus up to a three character
extension. If the filename is more than 8 characters, a period is required
after the 8th character. I believe with Mydos the period may be omitted --
another clue that Dos 2.5 may be being used.

There is a demo out now. It's on the latest MaximumPC CD and I'm sure
a number of places on the internet. I don't know about including the
original but the full version should be out soon if it isn't already.

I have 4 full Atari 800 Computer systems for sale or
you may pick and choose from the accessories. I have
lots of games too. I will be collecting offers from
all interested parties before I sell/split up the
systems. See current offers at the end of the inventory
list.

This is what I have:

4 Atari 800 computers
1 810 diskdrive (regular)
1 810 diskdrive (with the "Chip")
1 1050 diskdrive
1 Indus GT diskdrive / DOS & manuals
3 410 cassette recorders
1 1010 cassette recorder
1 XM301 modem
1 1030 modem
1 ATR8000
1 Percom dual diskdrive
1 U-Print Printer Interface
1 Competition Pro Joystick
1 Wico Big Stick Joystick
1 regular Atari Joystick

Cartridges:

6 regular Basic cartridges
1 Basic XL cartridge
2 MS Pac-Man cartridges
1 Pac-Man cartridge
2 Star Raiders cartridges
2 Centipede cartridge
1 Space Invaders cartridge
1 Bug Hunt Atari XE cartridge
1 Fight Night Atari XE cartridge
1 Qix cartridge
1 Atlantis cartridge
1 Defender cartridge
1 Missile Command cartridge
1 Music Composer
2 ACE80 XL Cartridges (80 columns for the Atari)
1 In-Store Demo Program cartridge
1 PQ The Party Quiz Game

Games on disk:

You name it, I got it. Most came from game swapping
with CHAOS (Capitol Hill Atari Owner Society).

Other:

? Antic and Analog mags
3 Your Atari Computer books
? Compute's 2nd and 3rd book
? Lots of other books for the Atari and ATR8000

==========
Current offers:

Bidder # Amount For what:

1 $50 2 diskdrives
2 $100 For everything

BTW, if you have the installation manual/scematics for the Rambo still
around, I have one I need to install in another 800xl and I can't find
the directions.

Could I get you to copy/fax/scan it for me?

Mission On Thunderhead
Commodore 64 & Atari 48K
©1986 The Avalon Hill Game Company

This auction is for a NEW copy of Mission On Thunderhead for the Commodore 64 and Atari 48K . This is a great Cartoon Action Adventure game for the C64 and Atari 8-bit. The packaging is in Excellent Condition. This game is NEW, and factory sealed. There are 3 price stickers on the front.

This is a 3 Day Auction ending on Thursday 10-22-98. Bidding starts at $0.01 and there is no reserve price.

Please email me if you have any questions.

Thanks,

eBaked

How come it doesn't run in Atari800Win with the 320XE and no basic?

3282. Re: Link more than two XLs

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: Jeff Potter <jdpotter@worldnet.att.net>
Message-ID: <362AA693.43C1D277@worldnet.att.net>
Source record: 59218

The following was my post to the Bill Kendrick and the Atari8-l mailing list (over a year ago now). See the next message for a GameLink II schematic.

Jeff Potter

==========

Okay. It took a while to remember some of the little tricks in writing SIO bus interrupt handlers (like remember your interrupt routine is called *after* a PHA instruction has been performed). Here is actual Action source code for a really simple application. It reads the joystick and sends out a word which affects the color of the other's screen. As a check, it shows the color it sent as the background color on its own screen. If two Ataris aren't connected, the program loops slowly, and speeds up when a connection occurs (using the already mentioned GameLink II hardware available from your local authorized AGDA distributor :^)

BTW: if you wait too long after you've launched the program, attract mode sets in. Even though you are resetting the color registers, attract mode XORs your values with other ones. Press any key to stop this annoying behavior (actual fix is left to the student as an exercise).

This source will compile to binary executable directly (no need to include the Action library routines, I didn't use any). So after compiling, the program will run without the Action cartridge. You must press RESET after running this program to restore the default interrupt vectors.

Warning: this program only does what I set out to do, so modifications you make are likely to cause you a lot of grief. I can be of some help.

Jeff Potter

working version of "Daisy Dot III" or any later edition of the program.

3290. A faulty 800XL - can anyone help?

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-19 00:00:00 UTC
From: jaa1 <jaa1@ukc.ac.uk>
Message-ID: <362AF7D2.2835@ukc.ac.uk>
Source record: 59226

Maybe someone could diagnose the cause of a fault on my original 800XL. It works perfectly except that it won't work with a cassette drive any more. It works with a disk drive, printer etc. but not with cassette even when directly plugged in. Attempting a cassette boot (with START and/or OPTION held down) causes the usual bleep. You press start as normal but then nothing happens. Similarly, if you activate the cassette drive directly with a poke nothing happens. It doesn't lock up in any instance however. Any ideas as to what the problem could be?

FYI...

The 830 was the first, a nd was acoustic... you put your're telephone handset into a set of cups..(that's when a phone was an every day Ma Bell desk phone!)

The 835 came out a few years later.... early 80's.. this was a direct connect... 300 baud..... pulse dial... came in a kit called Communicator II (830 was Communicator I).... with TeleLink2 Cart...Stored 2 services.. tle numbers, log on, and password!
Good luck..... I'm sure you should be able to get an 835.....
830...hmmmmmmmmm...

TextPro is also a very good word processor. It's a supercharged version
of a word processor Compute! magazine published back '85 (SpeedScript 3.0
-- I remember all those longs typing in all those numeric data!). Quite
easy to use. As soon as you load it, you just type away. Worry about the
special codes later. There were different versions of it (I lost track of
which was what), but you should be able to use it on the 800.

All you also need to remember is that the Atari is 40 columns, so don't
worry about wordwraps...just hit enter when you start a new paragraph,
etc.

3302. AMP files

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-20 00:00:00 UTC
From: Stephen Knox <gooch@erols.comX>
Message-ID: <362D080D.C1EA9818@erols.comX>

With the help of Atari800win I've found these really cool music files called AMP. I've got some old AMS stuff but the AMP stuff is pretty cool. Anyhow, I was wondering if there was an FTP site out there with a collection of songs? I've only got about 6-7 now and can't find any out there.

It has been out for ages and it does include the original game (actually
it's a modified version of XL-it).

I think I have some, even though it's not for use on the AMP program, but rather as a demo. It's Gilbertson and it's a couple of disk sides + the Antic Demo with the Atari song. Don't remember what it's called. I'll try to put it on my homepage in .ATR format.

>normal but then nothing happens. Similarly, if you activate the cassette
>drive directly with a poke nothing happens. It doesn't lock up in any
>instance however. Any ideas as to what the problem could be?
>
Well... when you said 'press start as normal', you should in fact press
another key, like return, to start loading - start/select/option don't
start the tape running from there - but you also said that when
you start it with a poke (presumably POKE 54018,52) it doesn't do
anything. So I think it's a problem with your tape drive, rather than
the 800xl itself.

Does the tape drive fast forward and rewind ok? (If it is a 1010, it
should be able to do both of those without the computer's permission -
some XC12 decks actually need you to do something like POKE 54018,52 to
allow them to FF/REW as well. Anyway, if this doesn't work, then there
could be a problem with the belt drive, or the motor itself. If you can
hear some motor noise coming from the tape unit, then probably the
belt has come off, or snapped, or something.

Hope that helps!

Ok, first, you for the transfer between the A8 and the PC you need at least an Atari XF551 Unit, next, you need not dos 2.5 but mydos the utility for transfer is called myutil and you can find it at UMICH, this utility can format a disk in 180k one sided mydos format, sorry you can only use one side of the disk, also, you need to use standard DSDD disks no HD works. the 1.2M drive works fine, i've tried at least two and both work ok.,i can send you the dos archives you need to begin to work, if you want them, just e-mail me.....

Yeah it has me confused also. I seem to remember that the RAMBO was supposed to be compatible with the 130XE banking scheme, except for that the 130XE could also independently select banks for ANTIC as well as the CPU. So it would seem logical that a program written for a RAMBO would certainly work with a 130XE style banking because they are the same. Unless of course it has to do with the fact that the stock 130XE only has 128KB of mem where the RAMBO has 256KB. Perhaps when it comes to mem over the 128K the compy shop 320KB and RAMBO 256KB use different methods for bank selection.

For personal archiving, of course...

Anyway, I have two 1050 floppy drives.

When I daisychain them together and try (under any DOS) to copy a disk, it gives me an error in the D2 drive...this drive has a piece of tape on it that reads "speed = 288"

is this different than the other 1050 which does not have that 288 sticker on it?

also, does anybody have any quick tutorials on how to copy a floppy on Atari?

I also have 2 810 drives, one of which is "Happy"

I also have 2 dual drives (homemade) to interface the ATR-8000

What I want to do is copy Diamond OS ... is there any way to check the copy protection of this disk???

thanks in advance, John

David,
Here is a way to deal with this. Go to Nick Kennety's page
http://www.cswnet.com/~nkennedy/ and d/l SIO2PC. In that file is a
program called 1050-2-PC. I believe there are instructions on how to
build the interface cable. This will allow you to connect an Atari disk
drive to your PC and make the disk images including formatting a disk.
You might also want to get an Atari emulator to work with. Atari800WIN
(Win95 only). This works with physical floppies too. You will nee the
Discommunicator (discom32) and Super UnARChiver programs or Winzip with
PKXARC.

I had never come across this before, tbh I never upgraded my 130 with
anything other than an Omnimon with 2 other op sys's switchable. But its
nice to see Rich is adding it to a future release :)

Also any idea why this demo when it running under the DOS version has
awful slow down, Alex said it was down to the switching between banks?

That's a lot of slowdown for what I presume is a change of memory
pointers ???

it seems when I type in ? fre(0) I always get 37902 as the answer...is this
48k RAM ???

One of my 800XL computers had a tag on it that said 256k...is this possible?
(note: even this one reads 37902 from fre(0))

thanks, John

That's what's available for Basic. You do have 48K or more then. Try to
boot a DOS 2.5 with RAMDISK.COM and see how many free sectors you get

BASIC (8K) takes up some of that memory, as well as other areas of the
computer. So if you do that memory test on the XL/XE series, be sure
BASIC is disabled.

For a fun test, try this:

```
10 GOSUB 30
20 ? FRE(0)
30 GOTO 10
```

Watch your memory eaten away...

3328. ATARI collection for sale! see details

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-20 00:00:00 UTC
From: BBowman@ato.com
Message-ID: <70isoubkq1@nnrp1.dejanews.com>
Source record: 59184

I have the following ATARI items for sale on EBAY in the following lots.

1. Two Atari Portfolio computers with a 128k card

2. One serial card and one parallel card for the Portfolio

3. One 64k card brand new in the box for the Porfolio

4. Two card drives for the Portfolio. One is brand new in the box, the other is used.

5. 10 games with boxes for the Atari 8 bit.

6. A PR Connection for the Atari 8 bit.

7. An Indus GT Floppy Drive for the Atari 8 bit.

8. An Atari CX-85 number pad for the Atari 8 bit.

9. An Atari Assembler Cartridge and a MAC 65 Assembler Cartridge for the Atari 8bit. Accompanied by several books for the Atari, as well as a collection of Antic and Analog magazines.

10. An Atari 800xl and an Atari 130 xe computer. With an ICD interface box. Accompanied by a SCSI adaptor, two 40 meg drives, and a power supply. I ran BBS Professional on this system from 1985 to 1990.

All sales end on Sunday, October 25, 1998.

Thanks

You should be able to check the same as you would if you were using a physical disk drive by checking the directory. The RAMDISK function in DOS 2.5, if I remember right, is drive 8 (D8:) under the default.

The FRE function in BASIC simply returns how much RAM is free to
BASIC, not how much RAM there is total. First off, the 6502 can only
address 64K of memory including any ROM, RAM, or memory mapped I/O or
chips. The OS ROMS and the BASIC ROM take up some of the addressable
space, as does the display list, any memory resident portion of DOS
and or other utility. Then you have memory mapped chips which doesn't
take up a lot. So basically, with no prgram loaded in BASIC, if you
take have a 64K (or greater) RAM machine FRE(0) will report 64K - all
the rest of that stuff. Now, if you have a machine with more than 64K
of RAM, it is banked in and out in portions much like EMS memory on
PCs. To the CPU, at any given moment there is only 64K visible to the
6502 of total mem.

3331. Atari800 slows down!!!

From: Aleksander Martin <alex6502@friko.onet.pl>
Message-ID: <362CDE82.6E82AA84@friko.onet.pl>
Source record: 59187

> Also any idea why this demo when it running under the DOS version has
> awful slow down, Alex said it was down to the switching between banks?

Exactly when You switch banks in real Atari it takes only 4 cycles of
STA, STX or STY command and You can go ahead with Your program, but when
Atari800 will detect that You're changing bank register it stops for a
while and it exchanges 16 kB block from somewhere to somewhere. I don't
get it why? Pentium processor is thousands times faster than 6502
clocked at 1.78 MHz, besides 16 kB is nothing in comparance to PC memory
which is usually 16-64 MB!!!!
Anyway, the emulator slows down a bit, but when my program changes for
example over 1000 banks per frame, the emulator stops for a few seconds
sometimes....
That's the whole problem!....

Cheers,

Alex

Not even worth the time anymore, I'm afraid. Back in those days, the most awesome of the computer programs were those that made the computer capable of speeds thought not possible, made the ANTIC generate more colors than thought possible, and crammed it all into 8k. Games like "Alley Cat" combined the best of great graphics, fast animation, excellent gameplay, synthesized voice and lively music into a 16k game. Nowadays, everything is a 3-D flythrough with pitiful gameplay and uses 10% of the power of your Pentium II. What happened to the likes of Starflight, where a dozen species and detailed maps of 800 planets fit on a 720k diskette? Heck, good luck even being able to write programs for the PC now. I remember writing a single-line 'PRINT "HELLO"' type of program in VB sometime back. The resulting compiled program was over 64k. What's up with that?

It would be about 37k or so and close enough as the system uses some
of the ram for it's own purposes.

>One of my 800XL computers had a tag on it that said 256k...is this possible?
>(note: even this one reads 37902 from fre(0))

The machine could indeed have 256k of ram but the older Atari BASIC
won't see the extra banks of ram. That does not mean the ram isn't
there.

Antic Music Processor, if I recall. It was
published in Antic near the end of its run.
Believe there was an AMP2 that had a few
new features. I also believe there was a
program that let you change AMS files to
AMP/AMP2. The author was Steven Lashower (I cheated and looked that up).
And in one of the very last Antic's he had
an article.plans for a digital sampler - the
Antic Sampling Processor.

Source record: 59103

John-

288 is the rpm that an Atari drive should run
at. Both should be 287 - 288 rpm.

Does the 2nd drive give you an error writing?
A sector copy program is the easiest way to
copy unprotected disks, but Dos "J" will do
it also. What program are you trying to copy
with, and is the Diamond program the one
you are trying to copy? If it is copy protected,
then you will have to use a "Happy" or "Archiver" to copy it. I kind of doubt
if it is
copy protected. The Happy Backup Program will give you a clue if something is
copy protected. If you can get an Archiver
"Chip" for one of the 810's or if you can
get a copy of the the "810 Happy Archiver"
or install a "Super Archiver" in one of the
1050's, then those will show very clearly what
(if any) copy protection exists. If you are
going to do anything very serious with the
Atari, a "1050 Super Archiver" would be a
good investment. Not only for copying, but
gives "Ultra Speed" when coupled with a
software or firmware change in an XL/XE
(I'm not sure about the 800).
Hope this helps a little.

Hi, atarians.

I'm thinking about putting atari 8bit in PC case. What do you
think about the atari? There are many peripherals and many power
supply. And also, my machine is 130xe and its keyboard is crap.

So I had an idea that put atari all peripherals in one PC case,
even old(just a crap for Windows use...) PC motherboard for
SIO2PC/APE. It's very smart, isn't it? :)

A question. Is there any good modification to do that?
Espesially I wanna know about using PC keyboard for 130xe.

Thanks in advance.

Or call Brad Kota at Best Electronics. You can find his number on the FAQ (I don't know it by heart. It's on the catalog too, but it's on my desk, at home, 12 miles from here. He's also working on a web-site.

BTW if you don't have Brad's catalog, you missing something. Even if you don't wanna buy anything. It's like an encyclopedia of Atari hardware.

It is something like New Life Electronics. There was a software company in te
Netherlands that was called ANG or A New Generation. The founder (and his
girlfried) had a baby just before the company started. Luckily the kid is
still alive. (read: the company isn't)

So when I heared Bob's new company name, it made me wonder. Did he have a kid?
(he usually make fantastic things. Would that include his kid??? :-)))))

Compy Shop is short for Computer Shop. Don't know if they really had a shop,
but these (german) guys developed a lot of great stuff (hardware and software I
believe).
It no longer exists (folded YEARS ago). Can't remember exactly WHAT they
developed but a memory upgrade was one of them - 256kB I guess

I always (98% of the time) use T:EDIT by ANALOG Computing. It will let you edit up to 32kB of text (on an XL/XE, don't know about the 800) but does not have things like block move. The file should be on the net somewhere (and maybe a POOLDISK II), the "manual" could be a problem. It was in one of the ANALOG's between 44 and 57 I guess (45 was the first one I bought. The text was readable and the paper of good quality, so it must have been before it turned into ï¿½$%&)

>it? If they have, for what reason?

I've seen it just now.

If I remember, I'll look up the address when I get home.

CU Mathy Van Nisselroy

PS this is an old address. Don't know if he still lives there. The following
is to illustrate when I last wrote to him. I had just sent Roy an
international postal money order for Daisy Dot II, when I walked into a nearby
book/magazine store. I picked up a copy of ANTIC and what did they anounce?

The release if DD3.

It's a great program. But I does have it's limitations. But then again, You
might not run into them, since I tend to want to go a wee bit farther than most
people/programmers can imagin.

If your looking for Fine Tooned try:

www.on_the_lamb.com

Mike Holman has been in hiding since he took in money for 100's of order for equipment that he never finished or never had in the first place and then disappeared, I located a large supply of ICD books from a storage shed in San Mateos last year and a salvage place called Computer Jones picked it all up, I found a check book and personal photo's of Mike's in the boxes, but no MIO II's, no MARS-8's, no nothing, just blank cartridge shells, a lot of old commmodore crap, some ST stuff, a lot of TI/99 stuff and TONS and TONS of musician magazines so don't waste your time looking for Fine Tooned Engineering because there are already a dozen blood-thirsty maniacs looking for him right now.

Actually with an ATR-8000 use can even use an Atari ST314 or ST354 disk drive (I used to), all you do is disconnect the cable between the small connect board and the floppy disk inside the case, shave the lower shell down so you can close the top/bottom case back together with a flat ribbon cable, then all you need is a long floppy drive cable and plug it into the floppy port on the ATR-8000 and your good to go.

Hi Alan-
True. But I was thinking that the conversion
from 300 to 288 was done at the hardware
level (clock speed) so that it is transparent
to software. (?)
Regards,
Larry

>Anybody ever hear of the Diamond OS (by Reeve Software)? It looks like a primitive Windows OS>

I bought the cart as a curiousity some years ago at an Atari Fair. It is fairly functional,
but all GUI's in 320 dots (or so) horizontal
suffer greatly. The ST at 640X200 in med.
rez was a big step up. 80 column Geos on
a C128 is pretty fair, especially with a Ram
Expansion Unit to swap in/out all of the
system files. Lack of good 80 column
hardware has always been one of the major
limitations of the Atari. Someone said they
were working on a new 80 column
implementation I believe...

3386. 800XL...all beefed up

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-22 00:00:00 UTC
From: John <not@achance.com>
Message-ID: <syyX1.1386$T01.926@nnrp2.ptd.net>
Source record: 59004

Hi All,

I just opened up my 800XL with the toggle switches on it...

***NOTE: in the following explanations a front slash (/) denotes a new
line
Ther are two expansion cards...

one is a card with 3 chips
one chip is labelled RAMROD XL / OSNXL V1 / FASTCHIP / OMNIMON XL (a version
of OMNIMON for the XL, I can only presume)

that same card has a chip with a sticker on it that reads "80"...is this an
80 column chip?
***after booting up I find that the computer has an atari 800 mode, so I
guess the "80" is supposed to be "800"

the third chip on this card is AMI 8330BKR / CO61598B - 01 / 1983 Atari /
Korea

anybody know just what this card is ???????

It looks like XL mode , 800 mode, and Omniview mode are the three switchable
modes on the right side toggle switch

==========
==========

the other card I presume to be a memory expansion...

confirmed...I lifted the tape and it says right on the card 256k XL Rev 1

question about this memory chip...why is there a toggle switch for it???

now...to put it all back together!!!!!!!!!!!

.....
.....
.....
.....
.....more brain busters for those with a clue.....
.....
.....

there is also a chip at location U29...it only has 8 prongs (4 each side)
labelled PCA EP8212

there is also a little white dial in the bottom left corner...all it reads
is "500k"

any clues to all this from you all would be greatly
appreciated.....thanks, John :)

p.s. my other 800XL has a RAMBO (memory expansion...how much memory on a
RAMBO?) card on it

also, my third 800XL has a 256k XL memory expansion on it

I'm not sure about the 1050, but in an 810, there was a fairly good-sized potentiometer that you could adjust to control the disk drive RPMs. 288 was indeed the factory setting. However, you could increase this number by up to 10% and still get reliable reads and writes. But the higher you went, the more likely it was you'd encounter problems. For example, if you really did go up 10%, to 317, you would often find that disks copied (written) at this speed could not be read by drives that ran at 288. If you wanted reliable reads across multiple drives, you really couldn't write above 300 or so.

When and if you tried to go higher than 10%, you'd begin to get read errors on existing disks.

I think you could also lower speed a bit, but I never saw any point in doing this (except perhaps for an odd misguided attempt at copy protection or something.)

3391. Looking for game: Dragon's Eye

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-22 00:00:00 UTC
From: pcerra.bounce@pacificnet.net
Message-ID: <362ec981.2985857@news.dsp.com>
Source record: 59009

Hi everyone,

sorry to ask this question again, but I decided I'd try one more time.

I'm looking for a copy of the old (1982?) Epyx game "Dragon's Eye."
This game was available for Apple II and Atari, and I'd like to play
the Atari version on the emulator I'm using now. I own a copy of the
game, though my disk has been fried and unusable for many years. This
was a wonderful game that saw you travel through a medeival land
fighting monsters and casting spells while you searched for a large
gem called the Dragon's Eye.

Does anyone have an ATR file of this game? Or does anyone have a copy
of the disk who is willing to create an ATR file? I've looked
everywhere, but I can't find an ATR of this game.

Or can anyone even verify that they know what I'm talking about? I
finally had success tracking down my last ancient game project -- Mar
Tesoro -- so please, if anyone ever played Dragon's Eye or knows that
the game exists, please post a message saying so. That way I won't
feel like I'm the only one. =)

Thanks everyone,
-Paul

I have have this upgrade, it's one circuit borad with 3 possition Swithc that enables you to select between the 3 roms

i have bought upgrade for sale long time a go in a 8 bit cataloge from England (a company that is no longer exist)....

i have a hard copy docs for the Ramrod and Omnimon Xl,

the OmnimonXL upgrade will give you a Emulated 80 column screen, i do not know if the 80 column screen is in a 800 mode or XL mode.

The third chip that you have is probably the Original Atari Rom chip that for some time was Produced

A while back, somebody indicated that they too had a Syquest EZ135 scsi removable drive hooked to their 8bit Atari.

If memory servers, you needed a special terminating resistor to get it to work on the 8bit.

Please respond if you know.

Thanks.

> %%%%%%%%%%%%
> Wes =:-)

Just to add to this a bit. If the player works by itself check the SIO
cable. The SIO cable could be at fault. If there is, in fact, NOTHING
happening, (no motor noises) check the connections of the SIO cable.
Wires do break and the pins do bend out of shape.
As noted above, if you can't get the FF/FRW or other functions to work
w/o connections to the console, then the player is probably bad. Check
that you have power properly applied to the tape unit and that it is
actually gettinmg into the unit. Check any fuses, etc.
Hope this helps!

The card is a Ranrod board sold by Newell Industries. You have the Omnimon, regular OS (Co61598), and probably a 800 compatible OS. As I recall, the omniview 80 column OS started up w/ a pink screen.

Its been a long time though... You might have to hold select or perform some other trick on the Omniview to get 80 column mode enabled. Can't remember now. :(

> the other card I presume to be a memory expansion...

Source record: 59026

Thanks to all the respondants to my plea. The general uptake I get is, unless I park my Atari, even the disk drive, right next to my work peecee (which isn't going to happen; lovely company rules) and use a SIO2PC, I can't move anything from a peecee to the Atari I've got. Even the emulator (except we've got NT on our machines) to create disks for the Atari, which is a most interesting idea, wouldn't work due to my stock 1050. I will get a DOS diskette from one of you very helpful Atarians.

thanks to the following who mailed me with helpful and informative comments:
Curt Vendel
Chris Chiesa
Robert S Ely
Perry Nir

'Course, it isn't JUST a DOS problem. I will continue to have this problem getting A8 SW off the 'Net...

Source record: 59027

Hi,
I'm sorry I wasn't able to include a copy of some of the previous posts in my reply here but I'm still screwing around with my news reader. I actually talked to David just before he posted his first message and I'm in the same boat he is, I have a 600XL, 1200XL, 810, and 1050, but no software. I just wanted to know if someone could explain why none of the software out there can make a disk readable in a 1050 floppy drive, I have a Compaticard floppy controller for the PC which I think is able to read/write single density, it seems like it would be no more or less difficult to make a disk for the 1050 than it would be to make one for one of the newer Atari floppys.
Anyway, I too should thank everyone who responded because even though I wasn't the one asking the question, all the info was helpful. Thanks.

Dan

Yes, TextPro is very good. There you have a many options. It supports
powerful macros!

Another good and simple word processor is the Compy Shop Texteditor.
It is only one File and it is very simple to work with. Easier than
Textpro but not so powerful.

Keep in mind that this will only display the amount of free memory in a BASIC program (which doesn't include memory used for OS functions, page six, or memory used by DOS. You can use memory locations 106 or 740 to see how much memory is present in your system. These locations count the number of pages of memory (groups of 256 bytes), so you should do something like:

```
PRINT PEEK(740) * 256
```

to find out how much memory, in bytes, is present in your computer.

3413. Atari Synapse game covers

I just started scanning some posters I have of some of the old synapse box art. I've got them on my webpage, and have scaled them to be desktp wallpaper.. the first offering is Reptilian/Protector II

If you guys like these, I'll do more.. it takes a while to scan them, assemble them (they're oversized) and then scale them to desktop size...

Hope you like the first set! ;))

eventually I'd like to get a whole set.. I'll list what artwork I don't have soon (the scans someone posted here a while back of a brochure gave me a good list of have/have nots.. ;))

Source record: 59032

Hi Tetsuo!

>I'm thinking about putting atari 8bit in PC case. What do you
>think about the atari? There are many peripherals and many power
>supply. And also, my machine is 130xe and its keyboard is crap.

I had my atari build into an PC case the last years,
now i have placed it back in the original case.
I had problems with cartridges and to connect devices at the expansion port.
The other peripherials make no problems.

>So I had an idea that put atari all peripherals in one PC case,
>even old(just a crap for Windows use...) PC motherboard for
>SIO2PC/APE. It's very smart, isn't it? :)

The idea with the second PC board is great !!! :-), but like ive said above,
theres many work to put your atari in an pc case and enable all the features
like ioexpansion and cartridge slot.
I had thaught i don't need it, but the time has come that i have more
peripherial devices and the corresponding problems.

I know many people that are (already) happy with your atari in pc case, but i
think its the better way to leave it in the old case.

>A question. Is there any good modification to do that?
>Espesially I wanna know about using PC keyboard for 130xe.

Look at: http://members.aol.com/MacFalkner

theres a plan 'Atari Keyboard Interface (AKI)' to build an interface to
connect an IBM keyboard to your atari.

(it works also in a pc case !! ;-)))

bye, Andrï¿½.

Howdy folks

What is this?
A couple a days ago, I download SIX files (most, if not all, demo's from Eastern Europe) and ALL are in ATR format. Common folks, this is ATARI 8bit land!!!!

Yes, I could use an ATR to DCM converter. But why not let the PC/EMulator users run a DCM to ATR converter. PC's are way faster and better at jobs like these. (and you guys and gals using ATR's are already using a PC. I on the other hand, love my ATARI more every second I use a PC!!)

David, All is not lost. When you get your dos disk, see if the person that sends it to you has a terminal progam. What you can look into is either finding a running bbs in your area, or running a bbs at work. You will need a modem on your atari if you don't already have one. Copy the files down at work, and upload them to the bbs. When you get home, dial up the bbs and download the programs. I still think you can find wildcat bbs for the pc for free, or you can run a bbs on your atari, and just call up your own atari and download straight to it. It's not the perfect solution, but with a little work, it can be done. Since a disk image is a little larger than a disk, you might need to get the disk files out of the .atr or .xfd file. I use an emulator, either ATARIWIN800 or xlit, to copy the files out of the disk image straight to the pc drive. Works like a charm. I think both of them will write to H1-4 which you can set up as a directory on your pc hard drive. Then you go to dos in the emulator and copy *.* to H1:. Just a couple of suggestions. Hope they help.

3422. Reading DD disks in Atari800Win

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-23 00:00:00 UTC
From: CopelandR@antispam.lycosmail.com
Message-ID: <3630bd86.8462709@news3.ibm.net>
Source record: 59040

Can Atari800Win read double density *.XFD disks? The reason I ask is I'm using DiskFormer 0.90 to read my Atari disks and transfer them serially as *.XFD's to my PC. The few single and enhanced density disks I've copied seem to work fine when I run them in the emulator, but none of the double density disks will read. (They're all SpartaDOS disks, if it matters.) I don't think it's a DiskFormer problem, since it had no problem detecting the format or reading the sectors as far as I could tell.

Thanks,
Ron

Listen to the music (it's "In the Halls of the Mountain King," hence the title of the game) very carefully! The louder it gets, the closer you are to achieving your goal. I forgot the name of the object, but once you obtain it, you have to try to make your away out while trying not to get killed by the spiders or flames, etc. Also use your lamp to see where you go, since the object is hidden from view.

Just a quick hint: "out" is at the top of the screen, and once you pick
up the "object," you have to get there before the music stops.

It's transparent to most software, unless the software actually measures
the rpm by reading the same sector twice and measuring how long it takes.
I think Atari Planetarium and Flight Simulator (the disk version) did that.

If You increase or decrease the speed drive can work corectly, but if the speed is too fast the last sector on actual track can overwrite the first!!! Remember that software inside the disk drive works with the same speed designed to 288 drives.

Hi group,

I am working with an Atari 800xl that had no RF cable, so I went to Radio Shack and picked up an audio dubbing cable (standard coax AV cable). The machine worked fine, sound is fine, except I got some weird color effects: i.e. the "white" text on the "blue" screen in basic was "dark blue" text on a "washed out blue" background. The games and self-test screens were equally curious.

Is there anything special about the RF cable I need to use, or is it a video problem (Modulator, GTIA, Antic?). I assume the text is still supposed to be white/blue, even on an 800XL :)

Thanks,
Steve

I think there _is_ something special about that original cable because
I tried just a plain vanilla RCA patch cable one time and got less
than desirable results as well. Put the included cable back on and
all was cool. It might be the "donut" or conductor resistence or I
dunno.

Many years ago I took the little box on the
XL cable apart. As I recall, it was actually a 75 to 300 ohm convertor. No guarantees, as I said it's been a looong time ago. Then again, you might try a JAM!! if you have a PC with a VGA monitor -- the display is so much better.

>again. Hellllllllp :)

Paul, this is from memory, so I really hope I don't steer you wrong.

First you need to collect the requisite amount of diamonds. Once you do this, an invisible flame appears somewhere in the cavern. It's not 100% invisible... sometimes it flickers for a moment and then you can see it. The way to find it is to listen to the music. The louder the music gets, the closer you are to it. Oh, and I think you can press the joystick button, and your flashlight will illuminate it if you're standing close to it.

Once you get this flame, go down to that little temple area that is protected by flames. Go to where the opening in the bottom is and stand underneath it. Then push your joystick straight down, I think it is. Something like that. When you do that, a skull will appear, filling the passageway. You can then push up, and you'll climb up the skull like a ladder. Now you're in the temple, and you can climb the pillars and get the crown!

Once you get the crown, a timer begins and the "Mountain King" piece begins to play. The tempo increases as time goes by, which can be a bit nerve wracking (that's the idea.) The point now is to become the King of the Mountain, and you do this by returning to the surface and climbing up to the highest mountain.

But now, if one of those cave bats (birds?) touches you, the crown will be stolen from you and returned to the temple, and you'll have to start all over again. The bats can be tough to avoid, and they will swoop right at you. You are helpless while you are falling, so try not to fall long distances. Although you'd try to avoid this anyway because you're trying to go up, not down.

And that's it! Once you get to the top, you get some cool strobing Atari colors, and then you advance to the next difficulty level and you get to do it again. That's what sucks about this game... the map is always the same. If there were different maps, gameplay would be more fun, but I almost never played for very long because it got repetetive in a hurry.

3442. Atari800 emulator for DOS question

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-24 00:00:00 UTC
From: pcerra.bounce@pacificnet.net
Message-ID: <36315bf0.9715333@news.dsp.com>
Source record: 59060

Hi folks,

I'm using the Atari800 emulator, DOS version. I would use Atari800win but the only machine I have access to right now that also has a joystick is running win 3.1, and unless I'm mistaken, this emulator needs Win 95/98 to run, correct? So that's why I'm using Atari800 for DOS. I have some questions about it.

First of all, my version (can't remember the version # offhand, so I hope it's not relevant) says that it can handle "artifacting" which is the way the Atari 800 used the different-coloured pixels on the television screen to get extra colors. Some games, like Mouskattack!, used this feature. Without it, the game lacks the proper colors and looks like it is covered in black vertical stripes, because of course many pixels were turned off.

Anyway, the question is: am I crazy, or does this feature simply not work? The instructions say to use the "-artif" flag, but I get an error when I try it.

Second question. How do I use this emulator to run games that span multiple disks? For example, I want to play games like Seven Cities of Gold, or Alternate Reality, that have multiple disks. Normally, when I want to play a game that is in .ATR format, I just run the emulator by typing "ATARI800 \atari\filename.atr" or something like that. But what happens when I am prompted by the game for disk 2? Do I need to press F1 and then can I enter the pathname for a new disk? Or is there something else I need to do?

Thanks in advance to anyone who can help me with this.

Oh, actually, I have a third question, but I doubt anyone can answer this one. Mario Mariotta kindly sent me an .ATR file of a 1981 game (that requires BASIC) called Mar Tesoro. In this game, you search for sunken treasure. The game draws a new map of an island every time you play, and then you sail around the squares on the map. Treasure is randomly distributed for you to locate. I owned this game long ago (the disk is now fried) and so I used to play it regularly.

My question is this: when I used to play, I'd find quite a bit of treasure. Now when I try to play using the emulator, it usually happens that I find NO TREASURE WHATSOEVER before I run out of money and the game ends. So obviously the random number generator is failing. Has anyone ever experienced this kind of thing before, not specifically with this game but with any other games that you are running on this emulator (or any other for that matter) ?

Thanks folks!

: Please respond if you know.

: Thanks.

I once borrowed my friend's external Scsi Ez135 which had a big terminating resistor pack on it. I could not get it to format. I don't know what the problem was, but perhaps it was a parity issue.

I would probably have bought one for my 8 bit if I could have gotten it to work. It would be nice to know if it is possible, and what I was doing wrong.

Righty, I'm trying this on version 0.9.7 which is the latest version but
its been up a while. The command line I used was :-

atari800 -artif

That works without an error BUT you don't get artifacting. But if you
type

atari800 -video 1 -artif

Its a better screen size AND you now have the artifacting :)

Atari800 bloke again to the rescue..Forget the commandline way to do it.
Run the emu with those earlier params and then hit F1 and use the menu
to pick what disks you want for all 8 drives :)

This menu is accessible all the time and is also used for games that
only swap on D1: , so you would just load till the game asks for the
other disk, hit F1, browse to the next disk and return to the emu with
the escape key.

As for the rnd function, maybe Petr or Rich can answer on its
functionality. Seem to remember something re a rnd update or fix at one
point?, so use the latest version if you are not already.

But there are some bits that fall over on the emu's, they are not
perfect (but damn near!!) and some bits hiccup, but at the end of the
day they are fantastic bits of code. So smile and try another title :)

Btw I know you were not complaining, just thought I would mention it as
there are those that DO complain about the slightest detail but forget
they pay NOTHING for these proggies :)

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

Correct. But that's why I said that with an 810 you had perhaps a 10%
speed range to work with. I had success putting my 810 up to 317 RPM,
but not consistent success. People who had drives that ran below 288
often couldn't read disks that I'd written at 317. So I typically
kept my 810 running at 300-302. It was a 5% speed increase and I
never noticed any problems. Did it make a difference? Probably not,
but it was fun to imagine that it did. =)

3453. SIO2PC FAQ posted on web page

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-25 00:00:00 UTC
From: Nick Kennedy <nkennedy@cswnet.com>
Message-ID: <70v9qf$pu3$1@news.csw.net>
Source record: 59071

I recently wrote a FAQ on SIO2PC and related issues and posted it on my web page. You can get to the SIO2PC page at www.cswnet.com/~nkennedy/sio2pc.htm and click a link to the separate FAQ page, or go directly to www.cswnet.com/~nkennedy/siofaq.htm

The FAQ contains--

Information on SIO2PC and its capabilities
Suggestions on resolving problems
Technical detail on the SIO bus (for those who might want to do some programming for it)
Recommended resourses
Some more links to bring up text files related to SIO2PC

I still plan to post my source code and an ATR image with some Atari stuff on it.

Please let me know what questions the FAQ didn't answer and also inform me of any errors you find.

Nick

Hi. Was Zaxxon only released on cassette for the Atari 8bit computers? I have the cassette version and it doesn't load anymore (maybe the tape is dirty or stretched?). I'd really love a cartridge version - was one ever released? If so, where could I buy one? (I looked at some of the usual online stores already)

Thanks.

It was released on disk, but not cartridge. The disk version also
contains features not on the cassette version, e.g. 3D movement in the
middle shoot-em-up section.

To find out free ram (in basic) just type ? FRE(0)

13326 (something like that) means you got a 16k rachine
37902 means you got a 48k machine (or more)

Anything in the middle of those means you likely have a 24k or 32k
machine.

For amounts greater than 48k, its a bit harder becuase basic can;t see
that RAM directly. You need an elaborate way to check the RAM.

3469. Re: Com and Exe to ATR files

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-26 00:00:00 UTC
From: Nick Kennedy <nkennedy@cswnet.com>
Message-ID: <711ne5$gq9$1@news.csw.net>
Source record: 58940

With the SIO2PC package, MAKADISK.EXE will do it. Also, SIO2PC allows you to install a plain PC file (not an ATR image). You can do this, create an ATR image with SIO2PC, and copy the "plain" file to it.

Are your COM and EXE files stored on Atari disks or on the PC? If everything is already on the PC, you could also to use Xformer to do something like I just described.

There are probably other utilities out there that will do it. Try following the 8-bit web ring. Start with my page at www.cswnet.com/~nkennedy/sio2pc.htm and browse the web ring.

> (note: even this one reads 37902 from fre(0))
>
> thanks, John
John, although your computer may have 48K ram it doesn't mean that all of it is free for use. A lot of it is used for the screen display, display list etc., as well as for internal lists of data used by BASIC and by the OS (operating system) while running so you can't use it for your programs. The BASIC FRE command only shows the amount available for your programs after the space for the items above has been made. In reply to your second question, your 800XL may have 256k worth of RAM but this does not mean that you can use all of it at once! This is what catches people out. The central processing chip (the 6502) that handles all of the memory can only handle up to 64k at any one time, so the extra memory usually has to be "switched" in and out in blocks of about 32k at a time. Why 32k? Because as I said earlier, BASIC and the OS use up the rest of the available RAM and if you were to switch any part of BASIC and/or the OS out the computer would crash no less than 1/60 second later! Obviously you have the RAMBO expansion installed... does anyone know how to use this?

P.S. Sorry if anyone has already replied to this but I couldn't see any replies to your message on the newsgroup area. James Austin.

AMP is Antic Music Processor, a music program that shows the notes as vertical bars and can also show the song lyrics while it plays. The second version allowed users to write their own music with lyrics. It looks like there is a copy of it in umich.edu in the "Sounds/Collections" directory. I don't know what songs are included in that file, but the AMP version of "Come Sail Away" was amazing.

Hop in my Chrysler, it's as big as a whale and it's about to set sail.

Just a couple little things you might be interested in.

www.atari.com is finally a live link again - it takes you to
www.hasbro-interactive.com

Also, I received my World of Atari '98 Show video the other day. The
quality was a little bit less that what I was expecting for some reason,
but I still found it very worth my money to purchase it. It's always cool
to see faces to attach e-mail addresses to!

I came fairly close to going this year; having seen what I missed, I'm
probably now more likely to go if they do it again next year.

Information on the video, produced by Mark Santora, is available at:

http://home.earthlink.net/~santora/

I found a monitor at an auction, I would like to know which System it can be used on. It is 11.25"(diagonal) screen size. The fron says "Atari SM124". Its color is grey. It was manufactured in FEB 1987. It has an attached plug cord (13 pins-round). If necessary, could you give me as much information as possible.

Regards

You sent this to every Atari group but the correct one 'comp.sys.atari.st'
(so I added it) as it is a monochrome monitor for an ST/TT. It allows
high resolution (and only this level) on all 16 and 32 bit Ataris. For
low or medium resolution, you need the SM1224 (RGB color).

3485. Broken R-Time 8

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-26 00:00:00 UTC
From: "David A. Paterson" <david_p@storm.ca>
Message-ID: <713cde$nm8$1@news.storm.ca>
Source record: 58956

I'm setting up my 800xl, and have hit a major snag. I can plug my R-Time 8 into my SDX cart, no problems. But the pass-through cart connector on my R-Time 8 is shot, so I can't have SDX->RTime->Action; I have to omit the RTime, and keep setting the Jiffy clock by hand.

Any hardware gurus who can diagnose my RTime by long distance and give me a simple cure?

Thanks in advance,

David Paterson

>

Minor correction here - the SM124 is NOT compatible with the TT. The
same is true for all other ST monitors. The TT uses a color VGA monitor
for most video modes, and the mono monitor for the TT is a big 19"
beast.

3491. Re: Syquest EZ135 Scsi

Newsgroup: comp.sys.atari.8bit
Date: 1998-10-26 00:00:00 UTC
From: tdrake1@umbc.edu
Message-ID: <710u9a$3r3$1@news.umbc.edu>
Source record: 59087

I have had a Syquest EZ135 hooked up to my Black Box for some time.
I have not tried it with any other interface, like the MIO.

One cannot low-level format it from the Atari as far as I can determine,
but that is unnecessary anyways and usually not recommended. Just need to
partition with the Black Box utilities or equivalent and then format from
SpartaDos or Mydos, etc.

It does require that a special terminating resistor is resident if it is
the only SCSI device in the loop. If using as an internal hard drive
(which is possible!) you will need to get the internal resistor from
Syquest direct. They sent it to me for free in a letter!

If external, you will need any standard 50-pin external resistor pack.

: Regarding people's responses to my posted message, it is not my cassette
: recorder since it works fine with my 130XE using the same leads and
: everything. Could one of the chips have blown? (like PIA)

It's possible the PIA could be at fault but before I'd tear into that I suggest you look at a couple other things. First inspect the SIO connector pins on the back of the computer. I've seen pins get bent over and crushed so they don't make connection with the plug. If this has happened to pin 8, straighten it and it should work again.

2 4 6 8 10 12 SIO connector looking
1 3 5 7 9 11 13 into computer

The only function of pin 8 is for the cassette drive and won't affect anything else. If that's not the trouble then I'd suggest you open up the case and look at the solder connections where the SIO socket mounts to the board. Resolder them if any connections are broken. The next possible cause is a transistor (Q7) and associated components that pulls pin 8 of the SIO connector to +5V when the cassette motor is supposed to run. If all that is ok then you're looking at the PIA chip or the data to it. Good luck.

Steve

I don't know about the Canon BJ200, but many of the dot matrix
printers used to have LF & CR options setablw via DIP switch. Maybe
canon just assumes usage on a PC I dunno. Some printer interfaces
for the Atari8 also have LF/CR options (notibly the Black Box I use)
but I do not know what the 850 has.

I don't own an R-Time anymore, but if the connector is the same as the one
on my SDX cart, it is just a standard card edge connector with the leads
cut very short. They are bent inward and soldered to the board to make
the connection.

Common things to look for: Bent contacts in the connector, or contacts so
worn they are pushed back and have lost thier spring. You can try
flexing them back out w/ a dental pick, but if that fails you might need
a new one. Also check for broken solder contacts at the attachment point.

Should cost you about $2 for a new one, but finding one w/ exactly 30
contacts at a place w/ no minimum order might be a challenge. If all else
fails try digikey or order directly from AMP. (both expensive im sure)

I connected a BJC70 to an 800XL and got exactly the same problem. (the whole page being printed on one line) I managed to fix it by changing the printer's internal settings to make line feed automatic, carriage return automatic and the printer needs to be in BJ mode. (fnar)

My Bob Term manual still looks great, the pages formatted just right, all I had to do was nail 'em together!

Sean...

Can someone send over a copy of A.M.I.S. bbs for the 8bit?

Sean... that's what' got me going nuts... it IS in BJ mode, and for some odd reason, makes no difference with the dip switch... and, per the manual, it should.... switch 6 is the one... I've got 12 switches... how are your set???
thanks../.
Vinnie

Hi--

I have some new information for anyone who can help. After hooking up the 800XL to the television, I squinted real hard and noticed the RED component is missing. Plenty of green and blue, but no red. I am still using the Non-Original RF cable, and going straight through to the TV (no switchbox). The 400/800 switchbox is a pass through for the 75 Ohm (F Connector) jack-- is this true of the 800XL box as well?

If anyone has an original 800XL RF cable they'd part with (cheap!), or better yet, confirm that the same thing happens on theirs with an AV patch cable in place of the original Atari cable, please let me know!

BTW, I plan to get a JAM!! for Christmas, but I need to know if this computer works now!!! :)

Thank You,
Steve

You can buy something called conductive ink that comes in a pen to "write"
circuit board traces.
I have had sega carts that had chewed up traces that I repaired with solder.
Just get a little solder to flow into the scratch from the connector and then
file it down flat.
:)

Mark

Beware of Headley Sappleton. He is a cheap scammer, a software pirate and a spammer wanna-be. About a month ago I needed to transfer some files from 5.25" Applewrite formatted disks to Mac or Apple formatted 3.5" disks. I saw his post in a NG; he was looking for a 3.5" drive. I sent him an Email and got a response. (Copies of both are at the end of the message). I sent him the drive and the SASE with disks. Since Priority mail to Delaware cost $5.00 and COD would have cost another $6.00 I foolishly did not send it COD. I have received nothing from him since then and he has not replied to any of my Emails from 3 different accounts. Headley is a fucking cheap scumbag to scam someone out of $5.00 after receiving a free drive. If you are dumb enough to buy anything he sells, you know what to expect. Another glimpse into Headley's character can be gained from his post to alt.comp.shareware (found via Dejanews):

" "grab" email addresses
Author:
HeadleyEmail:hsappleton@sprintmail.comDate:1997/08/23Forums:alt.comp.
shareware
 I am trying to find any of the programs discribed below; possible
shareware version so i can check them out thoroughly: (1) news server (2) a
software to "grab" email addresses from a newsgroup (3)a software to "grab"
email addresses from a web page

I rarely visit these forums so i would appreciate if you could please email me at hsappleton@sprintmail.com
sincerely
Headley"

Spam anyone?

Len
